My suspicion is that the plant that you have is a male plant and will not bear fruit or it may possibly be a female plant without any male plant in the near vicinity.

My suggestion would be that you secure one of the chemicals used for fruit set in apples and tomatoes, usually sold under the trade name of Fruit-set, and to dust or apply the spray at the time that the plants are in flower another year. Assuming the plant is a female one, the artificial hormones would stimulate the production of red colored fruit. The fruit would not bear a good seed but from an ornamental point of view this is not at all a serious drawback.

Possibly on another section of your

farm you will find bittersweet that does fruit freely. If you can find such a vine, my suggestion would be that you bend a branch over to the ground, lay a stone on it and come back a year or so later and cut off the young plant that has developed and move it to the location where you wish to have a fruiting vine.—A. M. S. Pridham.

Is it safe to use parathion for controlling insect pests?

This material should be used with respect. However, if you will read the directions on the package and follow them carefully, and to the letter, there should be no danger.

—A. A. —

A LOOK IN YOUR FREEZER

Frozen meat is good. Anybody who has frozen good, fresh meat and kept it well packaged at 0° F. can vouch for that. However, long storage periods even under good conditions will affect the flavor. That is why we should limit the storage period to a reasonable length of time.

Look through your freezer for old packages. Ground meat is getting old at one to three months, pork at three to six months, lamb and veal at six to nine months, and beef at six to twelve months. You may be lucky and keep these meats satisfactorily for longer periods, but to be safe, the old packages should be used quickly.

—George H. Wellington

It's Handy

Conserving Wagon Space

My son-in-law has two rubber-tired farm wagons with heavy hay racks on each wagon. He has a limited amount of space in which to store them, so he backs one wagon up a sharp bank, or offset, then he hitches his tractor to the other wagon and by putting down two planks from the ground to the first wagon, he backs wagon No. 2 onto wagon No. 1, hitches the tractor to wagon No. 1 and backs both wagons into the tool barn, so both wagons take up the space of one wagon. He also takes the tongues off and puts them under the wagons. The whole operation requires but a few minutes.—Ralph A. Warner, Greene, N. Y.

Flower Display

Use a berry box tray brightly painted for the grouping of your small house plants. This makes an attractive arrangement. The handle on the tray makes it easy to carry the plants to the kitchen for washing and watering and saves many steps for you.—Mrs. H. Michalik, Hamlet, Ind.

I have made a handy foot scraper (as shown in the sketch) with soft-drink bottle tops.—Mrs. K. J. LaVere, Lorraine, N. Y.

From the Editor's
MAILBAG

IN THE June 17 issue, along with the story "Unexpected Treasures", we promised \$3.00 for every letter we could print on the subject of "hidden" or "unexpected" treasures. Here they are:

Afraid of Banks

"A man named Gene Hazeltine, who lived near here, was afraid of banks. After his death a friend found about \$10,000 hidden under a stone in the cellar. When Mr. Hazeltine knew he hadn't much longer to live, he told this friend where to find the money; otherwise it never would have been found." —Mrs. Joe Warren, Proctorsville, Vt.

True Honesty

"My friend Delia Farrington, who earned every penny she ever had and brought up her family of six children unaided, bought a china closet of a family who were moving to the Middle West.

"The china closet was locked, and as she worked full time, it was several weeks before she opened it. When she did, she was surprised to find a bulky envelope containing over \$3,000.

"The next morning she took the money to a bank, where it was soon sent to the former owner of the china closet, who had given the money up for lost. They had tucked the money in the empty china closet and had forgotten where they had hidden it." —Mrs. Lois J. Harris, Glencliff, N. H.

Not So Foolish

"Almost a half century after the Civil War, a certain general store in Jamestown, Tennessee, still had pre-war articles for sale at inflated prices. Old Mr. Erwin, the proprietor, was considered 'close' by the townfolk. He had bought the property which consisted of a rambling store, a house, and log barns, from the Clements, parents of Mark Twain. They had settled there for a few years on their way westward.

"Everyone thought there must be buried treasure somewhere, as no money was ever banked by Mr. Erwin. The Erwins had a hired hand who was underpaid and who was considered stupid to work there half his life, but he gave away his secret once when whiskey loosened his tongue. Money was hidden in tin cans or any sort of container in many places in the buildings, and he found enough in the barn, now and again, to make it worth while to stay.

"Receipts"

"This may not be your idea of 'hidden treasure', but the man who owned it thought it was.

"Late in the depression of the '30's, I was stopped on the street by a man who asked me to buy him a dinner. He did not look like the usual type of panhandler, and he ate the meal as though he was hungry. When he finished, he said:

"I would not be broke if the government had not taken all my money. I was in the regular army (First World War) and I turned in all my pay to the government. All I ever got was the receipts for the money."

"I asked him if he still had the 'receipts.'

"They are in my trunk, I think. I

was so mad that I have never looked at them."

"When I examined his trunk at his request, I found a sealed envelope—just as he had received it and thrown it in the trunk 15 years earlier. The 'receipts' consisted of \$800 in Liberty Bonds with the interest coupons attached, total value about \$1,200. He offered me \$100 but I refused it. The bank fixed him up and I never saw him again." — Maurice S. Ham, Dryden, New York.

LOGICAL

ON your editorial page you say that sometimes you "wish that all the traitors, the radicals, and all others who are always bellyaching about America and who want to fasten Old World schemes on us, could be kicked out forever from this country and never be permitted to return."

That is very good but not strong enough for traitors.

My suggestion is that this country hang a few traitors. That would end all disloyalty in this country, and at the same time get rid of some of said traitors. — Mrs. Ethel P. Hutchinson, Canaan, N. H.

TOO MUCH SPEED

I MUST compliment you on your "cut and covering" farming article. Your ideas expressed there are altogether too true. Horse farming certainly was more thorough farming. Since our good teamsters became tractor cowboys their workmanship has gone backward.

I wish you had also mentioned disk harrowing. The average tractor cowboy gets a powerful tractor hitched to a tandem disk and then sets out to beat all speed records. As a result his harrow hits just the high spots and the rocks.

Although I haven't drawn a rein over a horse for more than four years, I do find I can do a good job of farming with a tractor if my employer will just give me time enough to do it.—C. G. Stockwell, Roxbury, Conn.

NEW YORK STATE FAIR
WILL BE WORTH SEEING

(Continued from Page 14)

their ancient rites and dances. Many interesting articles made by the Indians will be on display.

Religious Services. The New York State Fair will "Pause Before God" during Sunday, September 3, with a special religious program. Impressive services, with the three major faiths participating, will be held in the Coliseum, beginning with an organ recital at 3 p.m. The services will be highlighted by a 1,000 voice choir.

Back-Stage in Television. Fair visitors may watch as live shows are actually telecast to viewers throughout upstate New York. Syracuse's TV Station WHEN will beam its regular programs before a seated audience from a specially-constructed studio in the Television and Pure Foods Building.

In addition to the features mentioned, there will be fireworks each night, band concerts each day, and for the benefit of the younger generation, two shows at the Coliseum on Saturday put on by Milton Berle at 7 and 9 p.m.

The attractions being offered, plus a number of improvements on the grounds, will assure pleasure and satisfaction to those who attend this year's State Fair.

Latest World NEWS — every hour — on the hour.

NO DRUMS

(Continued from Page 8)

trouble, we can't let 'em destroy our country, and now it looks as if that means we'll have to fight."

Ann dropped his hand and stalked over to the other side of the road.

"I can just tell you this, Mark Wilson. You needn't be in a hurry to go traipsing off, and you'd better think a lot about it if you care anything about me. I'm your promised wife, but the man I'm going to marry is going to stay here with me."

Mark looked at her, half exasperated, and pleaded:

"What's the matter with you tonight, Ann? What's the use of being so ornery? I'm not enlisting yet. I was just talking it over with you like I want to talk everything over with you. No use your getting mad about it."

"Well," she said, a little mollified, "it's just like this: I've heard all this talk and argument — Dad talks of nothing else at home, especially when he's been drinking. But I think Henry Bain is right. He says there's no use having a war. If the southern folk want their slaves, let 'em have 'em, says Henry, and if they don't want to stay with these northern states, let 'em go. I knew that sooner or later you'd catch the glory and adventure idea and be talking about going, and it has worried me. I don't want you to go, Mark; I want you here with me."

Ann's quoting Bain to Mark made him furious, but by this time they had reached the Hover house and there was no more chance to talk. They entered, to find the party in full swing. Some of the older women were sitting rather gingerly on the slippery horsehair sofa and chairs, but having a good time bringing themselves up to date on the neighborhood news. Timothy Belden, the preacher, and John Crawford, storekeeper, were in a corner of the big farm kitchen, deeply engrossed in a game of checkers. Half a dozen other men stood over them offering advice on the plays to be made and making no more impression on the players than so many flies. Several of the older men were playing dominoes, but in the main the crowd consisted of the young people from nearly every family up and down the valley, and they were interested in livelier games than checkers and dominoes. Dancing was frowned upon in the neighborhood, but kissing games were popular, and of these the best liked was Post Office.

As the evening went on it became increasingly evident to Mark that Ann was deliberately trying to avoid having him as her partner. Just as plain was the fact that she was encouraging Henry Bain's attentions. By the time they started playing Post Office, Mark's anger was at the boiling point, and when it so happened—Mark thought it was deliberate—that Bain isolated himself in the big buttery and called for Ann to pay the forfeit, it was almost more than he could stand. When Ann and Bain emerged from the buttery it was evident from the girl's rosy face that she had been soundly kissed—all in accordance with the rules of the game, of course, but not with the rules, as Mark saw them, that should govern a girl engaged to be married.

To add further fuel to Mark's smoldering anger, Ann and Henry made it a point to sit together when refreshments were served.

Tired out from the games and excitement, the girls and women drifted together after supper, and the boys and some of the men went out to the big back kitchen. A jug of hard cider was produced, and it was not long before several were shouting their arguments for or against the war.

Loudest and most obnoxious of those who argued against the war was Henry Bain.

"Won't catch me fighting for the slaves," he shouted. "Let them go as wants to. I'll stay home and make hay while they're gone."

Although Mark had said almost the same thing to himself while milking that day, Bain's remark on top of everything else that had happened this evening infuriated him beyond endurance.

"I'm going to enlist if they need me, Bain," he said. "Do you mean that I'm one of the fools?"

"Put the coat on if it fits, Wilson. Glad to have you go. Good riddance, I'd say."

"Don't talk to me like that. If you weren't an older man, I'd knock hell out of you."

Bain was not more than forty, but the remark about his age made him furious. He walked up to Mark:

"Don't let my age stop you, Junior." Someone in the group called out:

"Stop it, boys. This is no place for a fight."

But several others, excited by the cider, shouted:

"Leave them be. Let 'em settle it."

Now Mark said, quietly:

"I don't want any brawl, Bain."

"Oh, ho, so you're backing down, Junior?"

"All right, come outside and I'll show you."

"Come on, Hank!" shouted one of Bain's supporters. "Mark's called your bluff!"

"Like h--- he has! Come on out, Junior, and remember, you asked for it!"

They all trooped outside, quickly formed a ring with Mark and Bain on the inside, while three or four held up lanterns. Before Mark could get his hands up in proper position, Bain hit him in the face, staggering him back into the group, where he would have fallen if the men hadn't caught and held him until the dizziness passed.

Mark shook his head and, feeling something trickle down over his lip

into his mouth, realized that his nose was shooting a stream of blood. He held the back of his hand clumsily against his nose, and before he could lower it Bain hit him again, this time in the stomach. Mark doubled up, dizzy with pain. Then, stepping back out of Bain's range and watching him warily, he waited for his head to clear and for his breath to return, in the meantime striving to restrain the worst rage he had ever felt in his life, the climax of a whole bad evening. But his rage did not blind him or confuse him, and he began to get his second wind.

Watching Bain carefully now, Mark stepped in, parried a blow to his face, and let go with everything he had. The blow landed over Bain's heart, the crowd saw him gasp and falter, but he regained his balance and rushed Mark. Mark sidestepped and as Bain went by, Mark hit him again, this time squarely over the left eye. Bain let out a yell, turned and hit blindly at Mark with both arms. The wound above Bain's eye started to bleed and he held the eye tightly shut. Mark was conscious of pain streaking from his knuckles like a red-hot iron clear up to his shoulder. He dodged Bain coming at him now like an angry bull, sidestepped again and, as Bain partially lost his balance going by, Mark clipped him on the neck back of the ear. Bain went down and for a moment every onlooker seemed to hold his breath. Then two or three men fetched basins of water and began to patch up both belligerents.

Mark, still overwrought with anger and excitement, strode into the house where the women were, walked directly to Ann and said:

"Get your things on. We're going home!"

Ann got quickly to her feet, her brown eyes snapping.

"Who says so?"

Mark stepped toward her, placed his hands on her shoulders and with his nose still bleeding, his shirt torn, his knuckles raw, he shook her, and said:

"I say so! Get going!"

Ann stood looking at him for a long minute, erect, shoulders back, every inch of her breathing defiance. Suddenly she smiled a little and without a word turned and went for her cloak.

When she came back into the room Mark took her by the arm and marched her out of the house and down the road. At her doorstep as he was about to turn away without a word, she said, meekly:

"Mark, aren't you going to kiss me goodnight?"

For a moment he was motionless. Then he grabbed her, picked her up half off her feet, and held her fiercely. Putting his bloody, battered face close to hers, he kissed her hard, set her down, and said, gently:

"Ann, next time you go anywhere with me, you stay with me."

To which she replied:

"All right, Mark, dear. Just as you say."

■ ■ ■

Finishing his after-supper smoke, George Wilson got up from his old rocking chair in the sitting room, knocked the ashes out of his pipe into the stove, and said to Mark:

"I'm going down to the store to get the mail and any news. Want to come along?"

Engrossed in his thoughts, the older man said nothing as they trudged down the valley road together to the little hamlet of Jenkstown. Used to his father's taciturn ways, Mark made no attempt to break the silence. If there was going to be war, he thought, he'd have to go. In fact, he'd want to go. But what about Ann? Could he stand it to be away from her so long? Would it be easier if they were married before he left? I'm not even certain she'll marry me, his thoughts rushed on.

But tonight the war seemed far away. It was a soft April night. The days were getting longer and the western sky was still colored with the soft spring light. Down across the meadows near the creek the peepers were almost bursting their throats. Spring had come again, and it was in his blood, and just then he wanted nothing of war, not even the thought of it.

Soon they reached the little country store in the hamlet. Already sitting or lounging around the big heating stove in the back end of the store were several of their friends and neighbors, more than usual, come to get the mail that had just come up on the stage from Owego, and especially the war news. Back of the little partition filled with pigeonholes for the mail, John Crawford was sorting the small pile of mail into the different compartments, his bald head glistening in the light of the setting sun sifting through the dusty little window. It didn't take him long to distribute the five or six letters that made up the mail. But it was on the copies of the country weekly that his attention was focussed.

John Crawford, the village storekeeper and postmaster, was in his fifties, a big man, the top of his head bald as an egg, but with a little fringe of ragged gray hair around the edges. His feet, ruined by a lifetime of walking around on hard floors and carrying too much too long, were covered with corns and bunions and were always encased in a pair of dilapidated slippers, the only footgear that gave him any comfort. Even these he was apt to throw off the moment he could sit or lie down. Over his fat belly a not-too-clean apron hung from a string around his neck.

Mark wasn't thinking too much then of the storekeeper's appearance. Instead, he was thinking how much he liked the man himself. He knew that John's short, gruff manner was merely a cloak for a big heart which was manifest when he handed out sticks of striped candy to the youngsters or something more valuable to the older people when they needed help. Under that gruffness and homely face was a dry sense of humor which often kept his friends chuckling—when the joke wasn't on them.

But right now John Crawford's face was clouded with concern. With the paper in his hand he emerged from be-

SLIM AND SPUD

The Search is Over

CONT.

(Continued from Opposite Page)

hind the partition and joined the group around the stove.

"Well, boys," he announced gravely. "It's here! Bill Sykes, the stage driver, told me that everybody was talking about it in Owego today, and now I see it's set down in this paper. It's here," he repeated. "War!"

He paused, and all waited for him to go on.

"The rebels have taken Ft. Sumter. Anderson had to pull down the flag and march out."

Another silence, and then someone said:

"Anything else, John?"

"Yes," answered Crawford. "Abe Lincoln has called for seventy-five thousand volunteers."

Crawford's statement seemed to have stunned the usually talkative group. Each was busy with his own thoughts of what the war would mean to his family and himself. Then George Wilson said, quietly:

"There's nothing new about that, John. We knew it was coming."

"Yes," Crawford agreed, "but I've been hoping that the South wouldn't fight. Now that the Southern states are seceding, it means that all hope for peace is gone."

In the silence that followed, Mark wondered why in the hundred times he had been in this store he had never before thought about how good things smelled — the barrel of crackers, the mold-covered cheese standing open on the counter, the coffee and spices, mixed with the odor of kerosene and the work clothes on the other side of the store. He looked at the glass case with its few sticks of striped candy that seemed never to have changed since his childhood. Was it because he knew in his heart that it might be a long, long time before he'd be back in these familiar surroundings that his senses seemed so alert just now?

Henry Bain broke the silence:

"Abe Lincoln'll never get seventy-five thousand men to free the slaves. And we'd never have had this war if you Republicans hadn't pushed that backwoods rail splitter over on the country. What we need now is a leader — and look what we got!"

Harry Cortright shifted his tobacco cud, missed the spittoon, and turned his face to the speaker.

"You're right, Hank. And here's one that didn't vote for him. If we'd elected a smart feller like Douglas instead of that long-legged monkey from Illinois, the Southerners would've been satisfied and we wouldn't had no war."

John Barrett, one of the younger farmers from below the village, nodded his head.

"That's right," he agreed. "And now how can we go to war and support our families?"

"Maybe it's more than a question of support," said George Wilson, quietly. "Maybe it's defending our families and our children from the loss of liberties in this country." Then he added: "Seems like you Democrats are thinking more about politics than you are about the Nation. It's got beyond politics now."

During this talk John Crawford had stood quietly by, holding the paper in his hand and looking from one old friend to another as they spoke. But after Wilson had spoken, John said:

"George is right. We can argue all we want to over politics in an ordinary campaign—it's healthy—but now we've got beyond words and talk in this country. It's time for action. We can't settle this argument around the cracker barrel; we've gotta fight, and we might as well make up our minds. And we aren't fighting for the Republicans or for Abe Lincoln or even for the slaves. It's just as George Wilson says, we're fighting for this country. That means that we're fighting for our families."

Henry Bain snorted with disgust. "Nice way to treat families. I'd say. Go

Swift action by Dairymen's League Cooperative

Returns \$3,267,000 to Dairy Farmers in N. Y. Milkshed

Dairymen throughout the New York milkshed are \$3,267,000.00 better off today than they would have been, had not swift cooperative action by the Dairymen's League interposed a price floor under the New York City marketing formula adopted last February.

The Dairymen's League was quick to point out when the formula was submitted for consideration that the price provisions for the first few months were not adequate to meet producers' costs. Other producers agreed with the League's position but made no concerted effort to remedy the situation. With its usual resoluteness and drive the League went direct to Washington.

Only Producer Organization in the Milkshed

Which Talked Directly with Government Officials

Experienced in the ways of government agencies, the Dairymen's League commissioned its President, Leon A. Chapin, to explain the dairy farmer's plight direct to the Department of Agriculture in Washington. As was reported in the Dairymen's League News at the time, Mr. Chapin found officials in the Department not only open minded and fair in their attitude, but willing and anxious to get at the true facts of the situation.

Swift Action Resulted

A few days after Mr. Chapin's visit, the Agriculture Department announced a price floor under the formula which would lift the Class I-A return for the months of March, April, May, June and July. The League predicted that the increase would amount to \$3,225,000 distributed among all dairy farmers in the milkshed, and would be followed by rising prices when the regular formula went into effect August 1.

Today's figures show that this prediction was fully justified. The actual increase produced by the price floor amounted to \$3,267,000.

Once again, cooperative action, and only cooperative action, paved the way to a brighter farm future.

Yeast Rolls...

PLAIN and FANCY

By GRACE WATKINS HUCKETT

WHEN one remembers that yeast is a tiny plant which needs food, moisture and warmth to grow, making yeast rolls need frighten no one! Sugar and flour provide the food; water or milk the moisture, and warmth can be managed, even if the bowl of dough must be set in a larger container of warm water—anything to get a temperature of 80 degrees F.

Roll dough is softer and richer than bread dough, although satisfactory rolls — if eaten fresh — can be made from regular bread dough. Slightly more liquid is used for rolls, and richness comes from more fat and sugar; eggs also go into the fancier doughs.

As the yeast plants grow, they give off carbon dioxide gas which stretches the gluten in the flour and makes the dough light. Baking expands the gas still more, thus giving a final lift to the rolls, at the same time driving out the gas and killing the yeast. When one wants the dough to rise quickly, more yeast is added in the mixture without any noticeable change in the final product. It is important to keep in mind that the yeast plant thrives at approximately 80 degrees F.; too much heat kills it. Its action may be delayed by cold, as in the case of refrigerator rolls.

Here are the basic recipes: make a start with them and go on from there to the fancy ones:

BASIC ROLL DOUGH

$\frac{3}{4}$ cup milk
 $\frac{1}{4}$ cup sugar
 $2\frac{1}{4}$ teaspoons salt
 $4\frac{1}{2}$ tablespoons shortening
 $\frac{3}{4}$ cup lukewarm water

1 package or cake of yeast, dry or compressed
 $4\frac{1}{2}$ cups sifted all-purpose flour

Scald milk, add sugar, salt and shortening and stir until dissolved. Cool to lukewarm. Put lukewarm water into a bowl and sprinkle in dry yeast or crumble in compressed yeast. Let stand until dissolved, about 5 to 10 minutes. Add lukewarm milk mixture. Stir in $2\frac{1}{4}$ cups flour and beat until smooth. Add remaining $2\frac{1}{4}$ cups flour and mix until thoroughly combined. Turn dough out on lightly floured board and knead until dough is tightly stretched and shiny, feels springy and elastic and does not stick to the board. Place in greased bowl and brush top lightly with melted shortening. Cover with clean towel, let rise in a warm place, free from draft, until double in bulk, about 1 hour and 25 minutes. Form into rolls of desired shapes and arrange in pans. Cover with a clean towel and let rise in warm place, free from draft, until double in bulk. Bake in hot oven, 425 degrees F., until brown, about 15 to 20 minutes, depending upon shape selected.

ACTION-QUICK-DOUGH: Follow directions for Basic Roll Dough EXCEPT: Use 2 packages or cakes of yeast instead of one. This reduces time needed for dough to rise; allow 50 minutes instead of the 1 hour and 25 minutes specified above.

BASIC SWEET DOUGH (Straight-Dough Method)

$\frac{2}{3}$ cup milk
 $\frac{1}{2}$ cup sugar
 $1\frac{1}{4}$ teaspoons salt
6 tablespoons shortening
 $\frac{3}{4}$ cup lukewarm water
2 tablespoons sugar

2 packages or cakes yeast, dry or compressed
3 eggs, beaten
6 cups sifted enriched all-purpose flour

Scald the milk; while hot stir in $\frac{1}{2}$ cup sugar, the salt and shortening. While it cools, measure the lukewarm water and 2 tablespoons of sugar into a small bowl; sprinkle or crumble in the yeast. Let stand until yeast is dis-

solved— 5 to 10 minutes for the dry yeast. Stir and pour in the lukewarm milk mixture. Stir in the beaten eggs and 3 cups flour. Beat until smooth. Stir in the remaining 3 cups flour or enough to make a soft dough. Turn out on a lightly floured board and knead. Place in a greased bowl and brush top lightly with liquid or melted shortening. Cover with a towel; let rise in a warm place, free from draft, until doubled in bulk, about $1\frac{1}{2}$ hours.

The dough is now ready to punch down and shape into cinnamon buns or any other desired shape and prepare for baking.

BASIC SWEET DOUGH—ACTION-QUICK METHOD: Use the Basic Sweet Dough—Straight Dough recipe as given above EXCEPT: Use 3 packages or cakes of yeast, dry or compressed, instead of the 2 mentioned in the recipe and allow 55 minutes for dough to rise instead of the $1\frac{1}{2}$ hours required by the Straight-Dough Method.

REFRIGERATOR DOUGH

$\frac{3}{4}$ cup milk
6 tablespoons sugar
1 tablespoon salt
5 tablespoons shortening
 $\frac{1}{2}$ cup lukewarm water

2 packages or cakes yeast, dry or compressed
1 egg, beaten
 $4\frac{1}{2}$ cups sifted all-purpose flour

Scald milk, add sugar, salt and shortening and stir until dissolved. Cool to lukewarm. Put lukewarm water into a bowl and sprinkle in dry yeast or crumble in compressed yeast. Let stand until dissolved, about 5 to 10 minutes. Add lukewarm milk mixture and egg. Stir in 2 cups of flour and beat until smooth. Stir in remaining $2\frac{1}{2}$ cups flour and mix until thoroughly combined. Place dough in greased bowl and brush top lightly with melted shortening. Cover and store in refrigerator at least 2 hours or until needed. To use, punch down dough and cut off as much as desired. Form into rolls of desired shapes and arrange in pans. Cover with a clean towel and let rise in warm place, free from draft, until double in bulk. Bake in a hot oven, 425 degrees F., until brown, about 15 to 20 minutes, depending upon shape selected.

ROUND OR HAMBURGER ROLLS

Prepare one recipe of Basic Roll Dough. When doubled in bulk, punch down and turn out on lightly floured board, divide in two parts and roll each part into a circle about $\frac{1}{2}$ inch thick. Cut into rounds with $2\frac{1}{2}$ -inch cookie cutter, brush lightly with melted butter. Place in greased baking sheet about 1 inch apart, cover with clean towel and let rise in a warm place, free from draft, until double in bulk. (About 1 hour for Straight-Dough, 30 minutes for Action-Quick-Dough, or 65 minutes for Refrigerator Dough.) Bake in a hot oven, 425 degrees F., about 20 minutes. Makes about 2 dozen.

CINNAMON BUNS

Prepare one recipe Basic Sweet Dough, using either the Straight-Dough or Action-Quick-Dough method, recipes given above. When dough is doubled in bulk, punch down and turn out on lightly floured board; divide into 3 equal parts. Roll out each piece into an oblong about $14 \times 8 \times \frac{1}{4}$ inches. Brush lightly with melted butter.

Mix 2 cups sugar, 1 tablespoon cinnamon, $\frac{1}{2}$ cup chopped nuts and $\frac{3}{4}$ cup raisins; sprinkle $\frac{1}{3}$ of mixture on each oblong of dough. Roll up each piece as for jelly roll; cut with sharp knife into slices about 1-inch thick. Place cut-side up in greased shallow baking pans. Cover with towel, let rise in warm

(Above left) This is how to "punch-down" the well-risen dough before turning it out on floured board and shaping it into whatever kind of roll you are making.

(Above right) Knead dough with "heel" of hand; press forward and with fingers draw front part of mass back to get under "heel;" keep doing this until dough is springy, elastic and does not stick to board.

—Photos by Demarest

place away from drafts, until doubled in bulk. The Straight-Dough method will require about 55 minutes, the Action-Quick method about 30 minutes. Bake in hot oven, 425 degrees F., about 20 minutes.

Prepare a plain icing to spread over the tops of the buns while still warm. Mix $\frac{1}{2}$ cup sifted confectioner's sugar, 2 teaspoons milk and $\frac{1}{8}$ teaspoon vanilla extract and beat until smooth. Makes 24 average-size buns.

FAN TANS

Prepare one recipe of Basic Roll Dough. When doubled in bulk, punch down and turn out on lightly floured board and divide in two parts. Roll out each part into an oblong about $17 \times 10 \times \frac{1}{2}$ inches and $\frac{1}{8}$ inch thick. Brush lightly with melted butter. Cut with sharp knife into crosswise strips $1\frac{1}{2}$ inches wide and pile 7 strips together. Cut piled strips crosswise into pieces $1\frac{1}{2}$ inches wide. Place cut-side up in greased muffin pans and cover with clean towel. Let rise in warm place, free from draft, until doubled in bulk. (About 1 hour for Straight-Dough, 30 minutes for Action-Quick-Dough or 65 minutes for Refrigerator Dough.)

Bake in a hot oven, 425 degrees F., about 20 minutes. Makes about 2 dozen.

CLOVER LEAF ROLLS

Prepare one recipe of Basic Roll Dough. When doubled in bulk, punch down and turn out on lightly floured board, divide in two parts and form each part into a roll about 9 inches long. Cut with a sharp knife into 9 equal pieces. Form each piece into 3 small balls. Brush ball with melted butter and place 3 in each section of greased muffin pans. Cover with clean towel and let rise in warm place, free from draft, until doubled in bulk. (About 1 hour for Straight-Dough, 30 minutes for Action-Quick-Dough, or 65 minutes for Refrigerator Dough.) Bake in a hot oven, 425 degrees F., about 15 minutes. $1\frac{1}{2}$ dozen rolls.

Divide $\frac{1}{3}$ of dough into long rolls of even size; cut these into small sections which in turn are divided into three small balls; these when put into muffin tins form the "clover leaves."

Here you see how to put together "fan-tans," those delicious rolls which lend an air to any meal.

Cinnamon buns have so many uses—with tea or coffee for simple refreshments, for a sweet touch at breakfast, for the school lunch; for good eating at any time!

TODAY IN

Aunt Janet's Garden

She Looks Things Over

TRULY this has been a good growing year, as proved by the way our shrubs and trees have grown. A young American elm has added yards to its height, and the older pin-oak has never looked so flourishing. At this writing, my schoolboy helper is doing what he can to curb the privet hedges, leaving the choicer shrubs to me.

It's getting too late for pruning, since that tends to make plants put out new growth that would be injured by early frosts. If fall is as late as spring was, the plants might not suffer—but one never knows! And we cannot wish the plants the ill luck of an unseasonably warm fall or winter. Our lilacs particularly suffered last winter, whole sections being killed to the ground.

The daylilies hang on later than usual—for which we are glad. Their yellow and orange trumpets against the green background of the forsythia hedge give life to the view across the back lawn. Already the buds for next spring's bloom show on the May-flowering viburnum, the rhododendrons and azaleas—another reason why late pruning may be disastrous!

This is the season when I give hearty

thanks for perennial phlox. Last fall I hardened my heart and pulled out two big white clumps, seedlings, I presume. The flowers had a hint of lavender on their backs, and the foliage turned yellow while that of other phlox plants nearby kept healthy. I had tried them out for two or three seasons and they always behaved the same, so out they went. Last spring I got some new Mary Louise plants to replace them and now I have the satisfaction of seeing clear white flowers and respectable foliage.

The other day I went out and got rid of another clump of phlox, planted for pink but which turned out to be more of a magenta color. There just are too many lovely clear colors available to be weak-kneed and put up with off-colors. This applies to gladioli and chrysanthemums as well as to phlox. In all cases one has to start with good stock. It does not have to be the newest and costliest varieties; there are many good proved varieties which are reasonably priced.

The same is true of the spring-flowering bulbs. Not since the war have we had such an abundance of them, lovely varieties too, some new, some old favorites—take your choice! The well-known seed catalogs list them.

Daffodils of all kinds need to be planted in September. Tulips can wait until late October. Peonies, roots rather than bulbs, are better if moved in Sep-

tember in order that they may become established before cold weather. And so it goes, next year's garden is in the making even while this year's is still with us.

HOME HAZARDS

Recently, the Greater New York Safety Council listed ten major causes of home accidents, in this order:

The old-fashioned can opener that leaves sharp jagged edges.

Objects piled carelessly on closet shelves.

Flowerboxes and other objects on window ledges.

Skidding small rugs.

Knives, scissors and other sharp instruments stored carelessly within reach of small children.

Smoking in bed.

Damaged wiring and other electrical equipment.

Unsafe substitutes for ladders.

Unprotected open windows.

Use of cleaning fluids that may be dangerously flammable.

GREAT AND SMALL

By Edith Horton

Do not dread
To go and see.
She bore great grief,
Silently;

Unless, perhaps,
This being smaller,
She will confide
In every caller.

House says so."

John Crawford pulled his steel spectacles further down on his nose and looked over them at Bain.

"No, I guess you're right, Henry," he said mildly. "There won't anybody ketch you doing anything except looking after your own selfish interests. But then," he added, "you ain't got any family yet to worry about." His eyes twinkled and he winked at Mark. "Guess by what I hear happened to you the other night when you tried to steal another feller's girl, you ain't likely to have a family for some time to come."

Bain jumped up and stormed out of the door. Some of the men started to laugh and then, noting the serious face of the storekeeper, they got up one by one and drifted out into the night.

3032

No. 3032. This sturdy coverall suit is a perfect choice for brother and sister's play times... in durable, warm corduroy. Sizes 1, 2, 3, 4, 6, 8 and 10. Size 4, for jacket and trousers, 3 yards 35-inch.

No. 2948. A washable treasure because of its trim tab yoke and twin pockets, and because it takes almost no time at all to make! Sizes 12-20, 36-48. Size 18, 4 yards 35-inch, and 1½ yards ric rac trim.

No. 2856. Soft and flattering basic dress... beautiful background for jewelry. Sizes 12-20, 36-46, Size 18, 3½ yards 39-inch, or 2½ yards 54-inch.

No. 2581. A stunning, easy-to-make school ensemble of flared, V-neck jumper and its own casual collar blouse. Sizes 2-8. Size 4, 1½ yards 54-inch for the jumper; 1¼ yards 35-inch for the blouse.

TO ORDER: Write name, address, pattern number and size clearly. Enclose twenty cents (in coins) for each pattern wanted. Add 20 cents for our new Fall-Winter Fashion Book which has over 100 practical, easy-to-make pattern designs for all ages, sizes, and occasions. Send to AMERICAN AGRICULTURIST PATTERN SERVICE, Box 42, Station O, New York 11, N. Y.

"I can always depend on Fleischmann's Yeast for fine results," says Mrs. G. W. Hinderer.

Reno Cook is State and County Fair Winner

Smiling proudly, Mr. G. W. Hinderer of Reno, Pennsylvania, pins a first-place ribbon on his favorite prize-winning cook. Mrs. Hinderer, a top winner at the Pennsylvania Farm Show and State Fair, has found time to carry off awards at County shows and to be a local leader for the 4-H Dinner Club. Says prize-winner Mrs. Hinderer: "It takes experience to be a good cook—but it also takes the best ingredients. When you bake at home, for example, you have to use a good yeast to get the very best results. I, myself, always use Fleischmann's Yeast because it's good and lively. It's one yeast I can depend on every time."

It's true! Prize-winning cooks prefer Fleischmann's Yeast to all others.

KERNELS, SCREENINGS and CHAFF

HERE AT HAYFIELDS

By Tom Milliman

I WAITED until 1949 to have a go at birdsfoot trefoil. It took me years to find out that some of our fields would not properly grow straight alfalfa. Then, although I'd known and studied birdsfoot trefoil since 1937, I persisted in the belief that modern pasture mixtures like brome-ladino-alfalfa would do better for us on our rougher fields. I was wrong here on two counts, the first being the belief that birdsfoot belongs only in areas in and near the

It is with some pride that we carry out our promise made in the last issue, with an article on this page by Tom Milliman. No other two men in the United States are better able, from experience, ability to write, and personal characteristics, to carry on "Kernels, Screenings & Chaff" than John Babcock, Ed's son, and Tom Milliman, both of whom will write regularly for this page.—E. R. Eastman.

Hudson Valley. In the second place I was off the beam in thinking that ladino could be kept going indefinitely on rough fields. Inevitably it was choked out for want of grazing or clipping the grasses at the right time.

In the dry spring of 1949 we plowed up a thin sod of old blue grass and little white clover at the foot of a slope too steep to plow. The plowed area is a patch of 2½ acres in a 20-acre pasture ranging from flat top to steep slope to a bottom shelf edging into swamp. The year of cultivated crop recommended to come ahead of birdsfoot was skipped, and after plowing, harrowing and fertilizing, oats were drilled with brome grass and inoculated New York State birdsfoot trefoil.

The drouth continued, and when the oats were only 6" high, cows were turned in to get at the grazing on other parts of the pasture, such as it was. But first they cleaned off the oats. When the cattle were returned periodically through the 1949 grazing season they went promptly to the oats-birdsfoot patch and grazed it to the ground. We thought money for high priced birdsfoot seed had been wasted.

A RASH OF YELLOW

In late July 1950 the patch broke out all over with a rash of little yellow flowers. We went into it and found an amazingly good stand of one year old birdsfoot trefoil despite the handicaps. It suits us as it is, and I shall have no fear of running out the birdsfoot when brome and other grass is not grazed or cut at the right time.

Meanwhile, in this same pasture the patch of brome-ladino-alfalfa we had established the year before is already reduced to almost straight grasses. The ladino couldn't stand the competition of the brome and volunteer grasses in the early lush growing period of 1950. Only closely controlled grazing or mowing would have saved the ladino but one can't do that all over. If about two good modern pastures are properly managed, it is as much as can be expected on any farm. Birdsfoot fits wonderfully on the rough land which

isn't going to get the concentrated attention required by modern combinations.

We shall fertilize our birdsfoot patch with 400 to the acre of 0-19-19 with borax in September. We shall also plow up the other patch and get that seeded to birdsfoot next spring. We will do the same on a third patch and thus bring into profitable production more of a 20-acre pasture which has for a quarter century been principally an exercise lot. On smoother fields I intend to stay with straight alfalfa, where suited, and with brome-ladino-alfalfa for grass silage hay and aftermath grazing on fields not adapted to straight alfalfa.

Fertilizing Alfalfa

Years ago we applied 400 pounds of superphosphate when seeding alfalfa with oats or canning factory peas and considered it sufficient for the life of the crop of from 5 to 8 years. Later we began to apply superphosphate as a top dressing the second year of cutting and then again two years later. Nowadays on straight alfalfa and also on alfalfa-ladino-brome where the legume is heavy, we fertilize each year with 400 to the acre of 0-19-19 with borax, beginning the year after the first cutting. This is about ½ the amount of fertilizer applied by the best alfalfa growers among our friends in central and southern New Jersey.

Are we justified in an expenditure of about \$10 per acre a year after the second year from seeding? I think so as judged by the very heavy yields of first and second cutting in the case of alfalfa and heavy first cutting, and aftermath grazing on the fields of alfalfa-ladino-brome. Also, it seems to me that the alfalfa is staying a little longer than it did 10 years ago. However, we have never been able to make alfalfa last as long as when we first grew it 25 years ago. Here again we are treating legumes in partial ignorance and probably wasting some of the fertilizer money, even though the fields thus treated are on the whole more profitable than with scantier treatment. We need more light on this subject from the soil scientist, the agronomist, the plant breeder and from those who deal with insects and diseases.

Farm Vacations

A week's vacation with pay is in the scheme of things for each of the three year 'round men at Hayfields. Generally, time off is taken during deer hunting season and an odd day now and then in winter. This year, the youngest man, George, got married during planting season and now occupies the third house on the farm. Although weather and illness had set us back at the time of George's wedding, we were optimistic enough to tell him that if he would take only a weekend for the wedding journey he could have two weekends and the intervening week off in August.

Naturally enough, George made a firm commitment with another couple (city worker) on a Canadian cottage for a week in early August. When it arrived we found that we had been reckless optimists in agreeing to time off so early. Showers had plagued haying and wheat harvest, and Jim, the top man, was ill again. Neighbors were kind enough to help out with a few hours now and then.

As of August 17 we are at last fairly

Tom Milliman, whose farm "Hayfields" lies in that limestone area 15 miles southwest of Rochester, Monroe County, in western New York, is shown at right standing in a field of Atlantic alfalfa, just about ready for second cutting. Tom has put up grass silage for more than 15 years, has a good stand of birdsfoot established and is always ready to try something new. The picture above shows his method of handling straw. It's field chopped, hauled to the barn in the dump truck, and blown to the mow. Tom, his men, and the dairy cows all like it better than long straw.

caught up with all small grain combined, second cutting haying under way and the straw removed from two wheat fields. I remain firm in the belief that a man working on a farm is entitled to a little time off with pay. However, on a diversified farm I am not smart enough to pick in advance the right week for the man who wants his vacation during the growing season. Considerable flexibility on the time of vacation is desirable. Fixed commitments far in advance may fit a factory, but certainly not a farm. Our excuse on George is that a man will probably get married only once and ought to be entitled to a few days of delayed honeymoon.

"Goldy"

Gold Sovereign is his name. Everybody on the place calls him "Goldy." He is a South Devon from England under 5 years of age, and is variously estimated to weigh between 2,300 and 2,700 pounds. He's quite a hunk of bull. South Devon cows are on the average the largest size females of any dairy breed and are of yellowish-red color.

This fellow with his shiny coat of reddish gold is the most docile bull any of us have ever seen. Men feed liberally any animal they like. We all like "Goldy." On a neighbor's farm he became so fat as to be unserviceable. On the advice of Dr. Fincher of the Veterinary College at Cornell we turned him out to graze, at first with three bred heifers and now with two dry cows as well. He could go through any fence surrounding him, but he's quite content with his little family, and when

anyone enters the pasture he stands guard, head in air but without pawing, roaring or making menacing gestures. None of us forgets, however, that the remarkably gentle bull is apt to be the one to do the killing.

Surveyors working for New York State have been tramping through that part of Hayfields all spring and summer without so much as "by your leave." They are surveying for the New York State "Thruway." One day a surveyor came running breathlessly to Jim and demanded that the bull be shut up at once. Jim replied that since the surveyor hadn't asked permission to come on the property, if he wanted the bull shut up he could do it himself. Nothing more has been heard.

Ladino, the Killer

Ladino is a marvelous legume but it has two bad faults, one mentioned above. The other is that it is the prime cause of cattle bloat. Our toll has been at least one head per year. This year we've lost two. Last year we had several desperate cases among the milking cows, which were saved in the nick of time. Bloat seems to come on hot clear sunny days, always in the afternoon. An animal swells up and dies in a hurry. One veterinarian told us that bloat is caused by the high sugar content in the ladino on hot days. We provide some dry hay or clippings but sometimes this stuff is too far away for bloated cattle to reach.

The New York State Veterinary College at Cornell is undertaking research to get at the causes of bloat.

Service Bureau

By H. L. COSLINE

TRICKY SALESMEN

A salesman called on my husband at the barn. He ordered him to leave. Instead, he came to the house and told me that my husband said that I should order two magazines.

A salesman came to the door and wanted to sell me some children's books. I told him that I didn't know whether my husband would approve, but he said the order could be cancelled if he didn't. The next day I sent a cancellation to the salesman at the address he gave, but it came back unclaimed.

We are getting in touch with both concerns mentioned above and expect to get a reasonable settlement. No reputable company would stand back of an agent who told a deliberate falsehood as reported in the first case. The second case is not so clear-cut, because most agreements which customers sign have a statement that verbal promises of agents will not be honored. For that reason it is wise to read and understand the agreement before you sign it.

INTEREST

We bought a refrigerator and we were told we could pay for it by putting a quarter a day in a meter. Later we were informed we could make monthly payments to a finance company. On checking up we find that the total payments to the finance company will be considerably more than the price quoted us by the salesman.

It is common practice for salesmen to quote a cash price and to say little or nothing about interest charges if it is to be paid for by instalments. This is a practice which the Service Bureau does not approve. However, any purchaser should realize that there are in-

terest charges on time payments. Obviously, if the subscriber was told that he could pay for it by putting a quarter a day in a meter, the contract should not have been sold to a finance company without the customer's permission. We are taking steps to straighten out this matter for our subscriber.

— A. A. —

BOTH SIDES

I received a letter asking me to copy a picture and return it. I did this and received an application from an art school indicating that I can become a commercial artist and earn money at home.

Although this school is recognized as legitimate, we would like to mention several precautions. First, any student should be sure he has the time, ability, and perseverance to complete the course and the money to pay for it. When you sign an agreement, you state that you will complete the course and pay for it even though it may not be completed. Second, in the case of art schools we have grave doubts as to the chances of getting profitable work to be done at home.

— A. A. —

WHO IS RESPONSIBLE?

We made a purchase from a local store. One piece was defective. It was returned by the store manager to the manufacturer, but the manager has been unable to get any response from the manufacturer.

Inasmuch as the Post Office was unable to deliver a letter sent by this store manager, we are doubtful that we will be able to locate the manufacturer. In spite of the fact that the store manager has done what he could to get an adjustment, we feel that the purchase was made from the store and, therefore, the store is responsible and should make an adjustment.

Sold on

By HUGH COSLINE

BIRDSFOOT TREFOIL

DAIRYMEN in Cattaraugus County, New York, are sold on the merits of birdsfoot trefoil. Last fall some postcards sent out from the Farm Bureau office brought 114 replies showing 1,480 acres in birdsfoot. Obviously some farms were missed, but out of those who replied, only one said he didn't want to grow any more.

The big reason for its acceptance is the enthusiasm of County Agent Wally Washbon. With him as guide, chaperon, and counselor, I spent a full day visiting farms in the county. Because his experience is rather typical, let's see how birdsfoot is doing on the farm of Andrew Bryant of Little Valley, New York.

We went to a field partly cut and which will go about 2 tons of hay per acre. In 1948 it was sowed with 6 pounds of birdsfoot and 5 pounds of timothy to the acre. It was put in in May with a bushel of oats as a nurse crop, and the grass seed was put on top of the ground behind the drill disks. The field had grown corn the year before and 700 pounds of superphosphate per acre was put on when it was seeded.

So far, Andrew has not put up grass silage, but he says that birdsfoot is going to push him into it. Because of his increased production of hay and pasture per acre he may grow some corn for silage, but his aim is toward plowing a minimum amount of ground per year.

All told, Andrew has 28 acres of birdsfoot and has seeded 6 acres this year. For pasture he has 4 fields varying from 3 to 5 acres. All are fenced and cows graze each field from 3 to 5 days, after which they are shut out and turned into another field. The farm also has a considerable area of native pasture, but the 34 cows in the herd, 26 of which are producing, will get two-thirds of their pasture from improved areas this year. The seed mixture used on the pasture is the same as that for hay.

At the farm of Robert Edgar, Jr., near Napoli, some pasture mixture demonstrations were seeded in 1945. While there has been one or two field days where dairymen saw the results, Wally Washbon remarked that one of the big benefits was to prove to him what mixtures were best so that he could be sure that he was giving the right information to dairymen. One result is to indicate that orchard grass in a mixture,

when properly managed, is an excellent grass for pasture. Wally has concluded that tests made at a distance are no good. He wants to know what a seed mixture or a fertilizer will do right in his own county. On a nearby pasture we saw 3 acres where birdsfoot had been seeded and 3 where the legume was ladino. The ladino was excellent the first year or two, but it is now gone entirely. This and other fields which we saw later indicate that birdsfoot is the right plant for hill pastures. In its logical place on fertile, flat fields that

Charlie Zefers of West Valley, New York, in a field of sudan which has been seeded to birdsfoot. Charlie was winner of the 1949 Green Pastures Contest conducted by Springville, New York, bank.

(Upper photo) "This field of birdsfoot on Andrew Bryant's farm will go about 2 tons to the acre," says County Agent "Wally" Washbon at the right. The young man in the center who seems more interested in the camera than he does in birdsfoot is young Mr. Washbon.

are in a regular rotation, ladino is a wonderful legume. It isn't suited to hill pastures where the owner hopes he will never have to plow the land again.

A number of farmers in the county have had good results from seeding birdsfoot in oats and then grazing off the oats. There is some evidence that a better stand results where the cows pack the soil as they graze. This practice has been (Continued on Page 14)

The birdsfoot on Lee Bailey's hill pasture has been grazed rather heavily. The lower picture, taken on a spot where droppings discouraged grazing, gives an idea of the amount of forage provided. Mr. Bailey was faced with the choice of buying more land or clearing an area for pasture. By using birdsfoot, he hopes it will be unnecessary to seed this area again. The upper picture shows part of a 30-acre field on the Bailey farm which, though quite steep, was cleared with a bulldozer, plowed, fitted and seeded to birdsfoot. The dark areas are the brush which the bulldozer pushed into the gullies and which has not yet been burned.

Hearty Fare For Willing Workers

G.L.F. Laying Mash

THERE'S nothing like a good day's work to give a man or a chicken a healthy appetite. Pullets that are laying and growing want and need a hearty supper and this is it. G.L.F. Laying Mash is the chicken's equivalent of meat and potatoes and fresh garden vegetables. Its got the same things in it—high quality protein—plenty of energy—lots of vitamins and the necessary minerals.

Protein—Necessary for body building and maintenance and egg production.

G.L.F. Laying Mash has balance and variety in protein—animal proteins such as meat scraps, fish meal, liqua-fish and milk products; vegetable proteins from soybean meal, alfalfa meal and the grains.

Energy—Chickens use up energy in every thing they do. A high-energy feed produces greater feed efficiency.

Energy is mostly supplied by the carbohydrates (starches and sugars) and the

fats in the ration. The grain products supply most of it.

Vitamins—Needed for health, growth, egg production and hatchability.

Of special importance are the vitamins A, D, and two of the B vitamins furnished through alfalfa meal, fish meal oils, yellow corn, riboflavin supplements, distillers' solubles, reinforced whey and meat scraps.

Minerals—Needed for normal health, good strong bones, and production of good shells.

Phosphorus, manganese, calcium and iodized salt are all added for this purpose.

The combined purchasing power of more than a hundred thousand farmers plus modern mills and quality control checks keep G.L.F. Laying Mash high in quality and low in cost. It is *the* practical Laying Mash for farmers who make their living from chickens.

EXCHANGE, INC.

Let's Sell Milk!

— By Dr. E. V. Moore —

The personal views of the Assistant Commissioner of New York State Dept. of Agriculture and Markets.

THE dairy industry in New York State, through its milk and milk products only, furnishes more than 40 per cent of the total farm income. Dairying has been the backbone of New York agriculture. Our dairy cows have paid off the mortgages on our farms and at the same time increased the fertility of our soil. The dairy cow is a great organic machine. She converts the vegetable protein of our roughages and cereals, which are of low protein value, into animal protein which has been proved to be of the highest value to human beings. Milk, without question, is one of the very best sources of animal protein for the American family.

Our average production per cow has been increased from 5,480 pounds of milk in 1930 to 6,450 pounds in 1949. This marvelous production record has been accomplished through dairy herd management, livestock public health, breeding programs, nutritional research and the efforts of agricultural organizations and other agencies. Apparently we have built up the production of milk faster than we have built up the market for it because we have failed to develop an increased desire for milk in the minds of the public. Our great marketing difficulty at the present time is that too small a percentage of our total milk is going into the fluid market.

Make Them Want It

It has been established beyond a question of a doubt that milk is the greatest food that the American people have, but we have failed to make the people want milk. With a pack of cigarettes selling at about the same price as a quart of milk, the public spends more money today for cigarettes than for milk. Seventy-two million packs of cigarettes are sold every day, but only sixty-six million quarts of milk are sold daily. Apparently the public hasn't found reason to complain about the high price of cigarettes — but always the price of milk is too high.

The application of the principles of salesmanship is one of the greatest things in achieving public understanding. It isn't a question of justifying the price of milk; that isn't our marketing problem. It is a question of believing in our product and of seizing every opportunity for selling our product.

Long ago Coca Cola made its public relations program one of salesmanship. There was no apparent need for the product. The doctors scorned it, the teachers talked against it, the women condemned it, and the government found fault. But by creating a desire, making the people want "that pause for refreshment," Coca Cola won one of the greatest victories ever achieved over an unpopular public attitude. Salesmanship of the product did the job. One of these days we are going to turn the need for milk into desire for milk. People are going to be less concerned about the price of milk when they really want the product.

Just let us analyze our situation. Let us look behind this quart bottle of milk.

(Continued on Page 19)

YOU'RE THE MAN WHO KNOWS— Which Tractor Tire Pulls Best In Your Soil...

SO YOU MAKE THE CHOICE

Only
Firestone Has Both...
New and Advanced **CURVED BAR OPEN CENTER**
The Famous Patented **TRACTION CENTER**

YOU'RE THE MAN who knows the soil conditions on your own farm best. For that reason, you're the man best qualified to judge which tractor tire will do the best job for you.

If it's the open center tractor tire you need . . . get the *new*, the *advanced open center* . . . the *Firestone Curved Bar Open Center*. It's the only open center tire with *Power Arc Traction Bars* . . . curved and tapered for extra drawbar pull and sure, positive cleaning; the only open center tire with *Double Shock Protectors* for longer body life.

If it's the traction center tire you need, there's only one — the famous patented *Firestone Traction Center*. It's the tire preferred by thousands of farmers the nation over. There are more than two million in use today, because thousands of farmers will have no other tire.

Again we say . . . you make the choice, but be sure you get a *Champion* tractor tire . . . either the *Firestone Curved Bar Open Center Champion* or the *Firestone Traction Center Champion*. You don't need to shop around . . . *Firestone Stores* and *Firestone Dealers* have both tires.

Listen to the Voice of Firestone on both radio and television every Monday evening over NBC

Firestone

**PASSENGER AND TRUCK TIRES
ARE MONEY SAVERS ON THE FARM**

Passenger cars and trucks on the farm are rolling up more mileage every year and tire cost is an important item. You can depend upon Firestone tires to give you extra, trouble-free mileage at lower cost. And remember, Firestone builds a time-and-money-saving tire for every wheel that rolls on the farm.

LICKED EVEN IF WE WIN?

SOME OF my friends have suggested to me lately that now that we are in a war, perhaps we ought to soft pedal our fight to maintain the basic liberties which have made this country great.

I fully agree that once in a war, every citizen is committed to go all-out to win it. However, I see no point in fighting the war at all if at the same time it is necessary to give up the very principles for which we are fighting, that is, our liberties and freedom of action. My friend John Pickett, writing in that excellent publication "The California Farmer," says:

"The need for the economies and the streamlining of the Executive Department of government is ten times as great as it was before the Communists marched into South Korea. The Hoover Commission is pushing hard for the reorganization of Budget and Accounting, Post Office Department, Medical Administration, and Personnel. One Congressman says: 'Various agencies of government are inventing reasons why their appropriations should be increased, and various pushers for central government are planning to ask for the re-establishment of controls for increased power; in effect, for the creation of a modified dictatorship. At this moment in American history, nothing could be more important, nor more serious.'"

Almost every man with whom I have talked expresses his dismay and fear that our own elected representatives in Congress have rushed pell mell into enacting legislation that would give the President and the Executive branch of the government dictatorial powers. Some of them may be necessary, but why the hurry? If we are to come out of this war with what amounts to a dictatorship, why all the blood, the tears, and the sacrifice to fight the war?

DIVERSIFICATION IN AROOSTOOK COUNTY

FOR years the Farm Credit Board of District No. 1 at Springfield, Massachusetts, Extension workers, and others have been urging Maine's Aroostook County potato growers to diversify at least a little so as not to carry all of their eggs—or rather their potatoes—in one barrel. But the Aroostook farmers had some point to their argument when they replied that they were a long distance from markets, potatoes did better than almost any other crop in Aroostook County, and that therefore it was difficult to make changes.

However, owing to the unfavorable publicity which potatoes have received, or from some other cause, Maine potato growers now are diversifying. Green pea production is greatly increased, dairying has been quite rapidly built up, and there are many good beef herds.

That is good, but I think the Aroostook County farmers are right that potatoes are a "natural" for their soil and climate. I never can forget the impressive sight when standing on some of the splendid rolling farms of the county and seeing almost nothing but potato vines—and at another time the potatoes, after they had been dug, stretching away almost as far as the eye could see.

THE GOING-AWAY TIME

AS LONG AS I LIVE I will never forget bringing my son George from our home in Yonkers to Ithaca to enter Cornell University. I had been up to George's room, and then he walked with me back to the station. A couple of minutes after he had left me at the sleeper, I hastily put my coat back on and overtook him to walk back up toward his room again. No doubt we would still be going back and forth if I hadn't taken myself sternly in hand.

Nor can I ever forget the memory of my wife standing in the doorway watching our oldest son, then a five-year-old boy, gayly padding down the street with never a backward glance, on his way to his first day in school. Life is surely like a book, with many chapters and changes.

By E. R. Eastman

I know that with many of you, as with me, it is difficult to keep cheerful at this time of year when summer is fading into autumn and when there are so many changes in family life. It is now that the boys and girls start school, or go away from home to college, or perhaps to a new job. In any case, it is a new chapter in life, for we know that these young people are likely never to be a regular and permanent part of our family again.

Nevertheless, it is right that they should leave home, for the worst thing we can do to our children is to interfere with their lives by selfishly holding on to them. Instead, we must bid our young people godspeed, do all we can to help them in their new life, and at the same time readjust ourselves to new responsibilities and to new interests that will keep us contented and happy.

CORN IS KING

OVER the Labor Day weekend I rode down through the farm valley where I was born and raised. I never make that trip at this time of year without realizing that there are few other places in America where I have been which grow better silage corn than the valley land in northern Tioga County, New York.

With the almost universal use of the new hybrids, silage corn is now better than ever, because it ears well and the ears mature. Soybeans are used in the corn on many farms, and these provide the protein which with the well matured corn furnishes in my opinion more actual feed per acre than any other combination.

Last but not least, what is more beautiful than a field of well tasseled, well eared corn, with the long rows contrasting with the green meadow alongside? Corn is indeed king!

IT FINALLY CAME UP

WHEN I was a teacher of agriculture many years ago, I helped one of my students treat the seed wheat on his father's farm for stinking smut. Acting on the principle that if a little remedy is a good thing, a lot more is a sure cure, I doubled the prescribed dose of formaldehyde and, with the help of the young man, shoveled over the big pile of grain and covered it with a blanket. Later the father sowed it, and it was a long time coming up. Greatly worried, I rode a bicycle many times back and forth to the wheat field at the back end of the farm to see if the wheat had sprouted. Agricultural teaching was young then, and I had visions of being the laughing-stock of the neighborhood, and of being laughed out of the school.

But finally, glory be, the wheat came up. When harvested it was completely free of smut, and the farmer sold it for seed at a premium price to his neighbors.

It is strange that after all these years and the scientific knowledge that farmers have, over half of the wheat fields still contain enough infestation of stinking smut to cut down the yield materially.

TO PREVENT TRAGEDY

OCTOBER 8-14 has been set aside as Fire Prevention Week. Every week ought to be fire prevention week, for there's no use in saving lives and property one week and losing them another. Too much emphasis cannot be put on the prevention of fires. Nothing short of death is more tragic, and death frequently occurs from fires, as evidenced by the fact that fires kill ten farm residents in the United States every day.

Now when colder weather is coming is the time to make a careful check of all the fire hazards on your place. Are your lightning rods well grounded? Are

stove pipes and chimneys free from holes and clean? Do they touch wood where they are likely to start fires if they get overheated? Never permit a smoker to carry a pipe or cigarette into a barn.

What about your water supply? Could the firemen help you even if they came before the fire got well started?

DOES THIS MEAN YOU?

"I noticed in the September 2nd issue of A. A. that you mentioned over-exertion and heavy lifting as one of the chief causes of heart disease. You would like to see fertilizer and feed sold in smaller-size bags to avoid over-exertion. Of course, the handling of these bags is only momentary.

"I wonder how many people, men and women, realize that they carry the equivalent of a fifty or seventy-five pound bag of fertilizer around with them every hour of the day every day. I mean those overweight people who carry around pounds and pounds of extra fat. It causes strain on their hearts, they have trouble finding clothes to fit, and they get tired quickly. I know a doctor who tells his overweight patients that 'there is only one animal which eats himself into the market!'"—Kathleen Berresford, Nutritionist.

THE ABOVE letter expresses concretely what it means to walk constantly uphill, upstairs, and take all the steps that we have to take every day with an extra and unnecessary weight of from 25 to 50 or more pounds hitched to us all of the time. No one thing that an overweight person can do would prolong his life and improve his health more than reducing his weight. This should, of course, be done with the help of a good nutritionist or doctor, and in addition you'll need the willpower to "shove back from the table."

YOU MIGHT GET HELP

ARTHRITIS is America's No. 1crippler. Many arthritics can be materially helped. If you suffer from this painful disease, maybe you will wish to write to The Arthritis and Rheumatism Foundation, 537 Fifth Avenue, New York, and ask for their free booklet, which will give you accurate information on arthritis.

YOU GET THE CHECK

DON'T fall into the prevalent habit of leaning back and letting the Big Planners in Washington make plans for you. They promise to employ you and clothe you and feed you. But when you sit down at their table, the seating arrangement is always the same. They sit at the top of the table and are first served. You sit at the foot, near the cashier. You get the check to pay."—Bruce Barton

EASTMAN'S CHESTNUT

SOME years ago my brother (many of you will remember him by his pen name, George Duff) lived close to a railroad water tank. One day a passenger train broke down, and both the engineer and fireman crawled under it to try to locate the trouble. My brother crossed the road, leaned down and yelled at the engineer:

"Come out! Maybe I've got something that'll help."

When the engineer crawled out, red of face and sweaty, my brother handed him a piece of store string and said:

"Maybe this'll do the trick!"

The engineer glowered for a moment, and then burst out laughing.

I was reminded of that incident by the story of the old engineer who was breaking in a green young fireman. He told the fireman just how to climb on to the tender and bring the spout of the water tank down and release the water, but some way or other the fireman got his foot fastened in the chain and fell into the tank. The engineer stood looking at him for a moment with a jaundiced eye and then drawled:

"Just fill the tank with water, Sonny. No need to tramp it down!"

AA's Farmers' Dollar Guide

MILK: At recent delegate meeting of Metropolitan Producers Bargaining Agency at Syracuse, estimates were given of prices for coming months as compared to last year. Figured by Harry Young, economist for the Bargaining Agency, and Guy Wightman, statistician for the Dairymen's League, they were characterized as conservative. Here they are:

Class I—1950	Class I—1949	Uniform Price—1950	Uniform price—1949
Oct., \$5.61	\$5.24	\$4.77	\$4.18
Nov., \$5.79	\$5.24	\$4.68	\$4.30
Dec., \$5.78	\$5.24	\$4.62	\$4.26

Estimates for the Class I price for the first 6 months of 1951 which, of course, may be upset by war developments are as follows: January, \$5.56; February, \$5.50; March, \$5.34; April, \$5.24; May, \$4.74; June, \$4.78.

New Class I formula for New York City will do a better job than the old formula, but two things must be watched. If government price ceilings are established without establishing wage ceilings, dairymen could easily be penalized in price relationships. Also, if price ceilings are established, the index of U. S. wholesale prices (one of the factors in the Class I formula) will be inaccurate and too low to reflect actual conditions.

CONTROLS AND PRICES: Right now it appears that price ceilings will not affect food, either at the farm or in a store, in the near future. They will not be established at a figure below parity, and the only products now selling above parity are cotton, cotton seed, tobacco, and wool.

In the near future, prices farmers pay will increase more than prices farmers get. If long-time war develops, this will be reversed.

In general, acreage controls will be loosened on the theory that we must plan enough food even though we may get too much.

SOCIAL SECURITY: Effective January 1, 1951, farm hired men (not owners, share croppers, tenants, migratory workers or members of the farm family under 21) will be covered by social security. Here are highlights:

1. Workers will establish eligibility by working full time for one employer for 3 months. (This can be done in October, November, and December, 1950.)

2. Beginning January 1, hired man must work at least 60 days and receive at least \$50 in cash in each calendar quarter to remain eligible. If he doesn't do this, he must again work full time for a calendar quarter to re-establish eligibility.

3. Social security taxes of 3% will be put on all cash wages, to be paid equally by employer and employee. This will require bookkeeping by farmers who hire help.

4. Farm worker becomes eligible for benefit payments at 65 if he has received at least \$50 in cash wages in as many as half of the calendar quarters since Jan. 1, 1951.

5. Benefits will be same regardless of time worked, once the worker has met minimum requirements. Average wage of \$100 a month will give benefit payment of \$50; \$150 will give \$58; \$200—\$65.

PLANS: It is always good business to put farm equipment in shape during winter months. This year it is essential. Topping the list of probable controls is allocation of steel for military needs, which will cut amount available for farm equipment. Check your machinery for repair parts; get them and get them installed.

Figure fertilizer needs and see that it is stored on the farm well ahead of planting season.

If you buy additional land, be sure it is highly productive. Taxes will take more and more of the net proceeds of poor land.

In planning, remember that you may lose young hired men to the armed services.—Hugh Cosline

The Song of the Lazy Farmer

MY DEAR old father used to say that we would live to see the day when nations which got mad and sore would settle things without a war. In school, our teachers said the same, we learned the world at last was tame, that guns and warships were things we would prob'ly never even see. Since then I've lived for fifty years, and still one of our greatest fears is that we'll have to fight again; tho ev'rybody has a yen for peace, I am afraid that we may soon be fighting World War Three. I'm glad my pop's not still around to see how mankind's losing ground, and it is good those teachers ain't here watchin' while their hopes grow faint.

I guess the thing they all forgot is that the human race is not as smart as it has claimed to be, nor civilized much yet, by gee. About the only

thing we've done is learn to make a bigger gun; we like to brag about the brains that dream up better ships and planes, or bombs a hundred times as bad as any we have ever had. Of course, I'm glad we've got that stuff, cuz hating war is not enough; to stop a fight, 'tis sad but true, the other guy must want peace too. And if another war begins, of course I hope that our side wins; but all of us will hope and pray that we solve things some other way.

Can you afford this?

If your daily milk yield is UP one day and DOWN the next, you're losing money.

When you can get this!

THOUSANDS of dairymen get high, even daily milk yields with the De Laval Magnetic.

No "Up-and-Down" Milking Losses

When You Milk Your Cows With The

DE LAVAL MAGNETIC SPEEDWAY MILKER

HERE'S WHY the De Laval Magnetic Speedway Milker is the only milker in the world that can offer dairymen everywhere high, even milk production day after day, year after year:

1. As you know, cows are creatures of habit.

2. They produce best when milking speed and action are the same day after day after day.

3. If they are not milked at exactly the same speed and with exactly the same action every day they do not "let down" all of the milk. This causes "up-and-down" milk production.

4. Ordinary milkers with complicated pneumatic pulsators may vary in milking speed and action from milking to milking. Most pneumatic pulsators are affected by weather, foreign matter, dust. They can be tampered with and adjusted according to the whims of the operator. All of these things cause a definite change in milking speed and action. The result is "up-and-down" milk production losses.

5. The De Laval Magnetic Speedway Milker is the only milker in the world whose milking speed CANNOT vary from milking to milking.

6. This is because the pulsation rate of the De Laval Magnetic Speedway Milker is automatically controlled, all the time, at the ideal 48 pulsations-per-minute rate by the De Laval Magnetic Pulsation Control, the factory-set, non-adjustable "heart" of the De Laval Magnetic Speedway Milker. No other milker has this feature!

7. This means high, constantly even milk production every day. Can you afford to milk your cows with any other milker?

73 YEARS OF LEADERSHIP IN MAKING BETTER PRODUCTS FOR BETTER FARM INCOMES AND BETTER FARM LIVING

THE DE LAVAL SEPARATOR COMPANY

165 Broadway, New York 6 • 427 Randolph St., Chicago 6, Ill. • 61 Beale St., San Francisco 5, Cal.

DE LAVAL SPEEDWAY WATER HEATER

Provides 12 Full Gallons of 185° Water

To thoroughly sanitize your equipment you need hot water of not less than 180°. The De Laval Speedway Water Heater produces not just 8 or 10 but 12 full gallons of 185° water.

For purposes other than sterilization, dilute a portion of this water with cold water and obtain as much as 10 gallons of 140° water and still have 7 gallons of 185° water for sanitizing your equipment.

Many other features...exclusive with the De Laval Speedway Water Heater assure you of most economical operation and safeguard against frequent replacement costs. Why not see your local De Laval Dealer today?

AUREOMYCIN

Crystalline OINTMENT

For MASTITIS

Lederle

Quickly Restores Production of Salable Milk

NOW AN IMPROVED PRODUCT • A PURER FORM OF THE GOLDEN
DRUG • TWICE AS MUCH AUREOMYCIN IN EACH TUBE • ACTIVE
FOR MORE THAN 48 HOURS • NO INCREASE IN COST

Greater effectiveness in medication against bacteria commonly found in mastitis is now obtained by the one tube treatment with AUREOMYCIN Crystalline OINTMENT.

AUREOMYCIN Crystalline OINTMENT is

- MORE EFFECTIVE THAN PENICILLIN
- FREE-FLOWING AND SPREADS RAPIDLY THROUGHOUT THE UDDER
- REQUIRES NO SYRINGE OR MILK TUBE

In cases of acute septic mastitis, in addition to udder infusion, the injectable form of SULMET* Sulfamethazine *Lederle* should be used, by or on the advice of a veterinarian. Subsequent treatment may be conducted with SULMET OBLETS*.

VETERINARY AUREOMYCIN OINTMENT may also be used for the prevention of superficial udder and other mastitic infections. When injuries to the udder or teat occur, it is advisable to apply this ointment locally to the wound and at the same time infuse the quarter adjacent to the wound with one full tube of AUREOMYCIN OINTMENT as a preventive measure.

For maximum efficiency in the use of AUREOMYCIN OINTMENT For Udder Infusion and best management practices and disease-control procedures for avoidance of reinfection, consult your veterinarian.

What Do YOU Think?

By JIM HALL

More On Soy Beans

ABOUT TWO months ago I referred to the great job John Whitman of Jordan, Cayuga County, N. Y. is doing to produce his own feed for his dairy herd. Last year John's purchased feed costs were only 7c for every 100 pounds of milk produced—and his herd produced an average of better than 10,000 pounds.

The fact that John grew his own soy beans for grinding, with his grains for a complete dairy ration brought forth a lot of questions from readers. Most of them are summed up in this letter from S. F. Burton of the Burton Poultry Farm at Clarence, N. Y. Mr. Burton said:

"We have been growing oats, wheat and corn for our poultry feeds. At present we are buying only a mix mash, using 800 lbs. to 1,200 lbs. of our own grains. We sold over 700 bushels of wheat in June, as we had 45 acres almost ready for harvest. Feeding our own grains has enabled us to feed our poultry with only 20 per cent of purchased mash.

"I am interested in John Whitman's growing of soy beans. What variety does he plant?

"Rate of seeding per acre?

"Does he plant in rows and cultivate or does he drill with all the teeth?

"What is his average yield per acre?

"Does he use a weeder? If so, at what stages of growth and how many times?

"If he cultivates, how many times and at what stages of growth?

"I believe quite a number of your readers would be interested in the answers to the above questions. Several years ago I drilled soy beans solid, but the yield was not up to expectations and I never repeated."

I didn't know all the answers, so I had to call on Mr. Whitman for help. His letter to Mr. Burton follows:

"Jim Hall has forwarded your letter in regard to the raising of soybeans.

"We are raising the Cayuga soybeans at the present time and are well satisfied with them. We have also grown Senecas, but as they require about two weeks longer growing season we discontinued the use of that variety. However, they do pod a little higher on the stalk and so assure fewer beans left with the stubble at harvest time.

Plow Early—Plant Late

"We seem to get fairly good weed control by plowing as early as we can and then going over the field at frequent intervals with a spring tooth harrow. By raising Cayugas we can sow them as late as the last week in June, which gives us plenty of time to take care of most of the weeds before planting time. By the end of June we can expect warm weather to keep the beans growing fast so that any remaining weeds are apt to be outgrown. In regard to planting the last week in June, I might add that we are situated in Central New York at an elevation of about 500 feet.

"We drill our beans using all the teeth and put on two bushels of seed per acre, planting just as shallow as we possibly can and still have the seed covered. The seed is inoculated and put into the drill while still damp. In order to do this we inoculate three or four bushels at a time, one man doing this

while the other drills. As we understand it, fertilizer in excess of 150 pounds per acre is apt to be injurious to the inoculant, so we apply 300 pounds of superphosphate a few days before planting time.

"After drilling we do not roll or cultipack the ground. It is our opinion that this covers the seed too deep for a quick come-up, even though it would be a decided advantage at harvest time.

"We haven't found it necessary to use a weeder.

"Our yield averages 25 bushels per acre, having been as high as 36 bushels. Harvesting is done with a combine, although we have cut with a grain binder and then put them through a grain thresher, which is very satisfactory."

Observant Readers

It is getting so a fellow just doesn't make a mistake in *American Agriculturist* any more! Readers spot them every time.

In an article I wrote on irrigation in the August 19 issue, a fire chief was the first to catch my statement that the pump "sucks" water from a pond. He pointed out very gently that pumps just don't suck water; that they merely draw the air out of the line, and that the normal air pressure on the pond or creek surface then forces the water up into the line and the pump takes it from there to build up pressure. Many thanks to the chief for his correction. But you got to admit it is a lot easier just to say the pump "sucks" the water up.

Readers not only spot my errors but even question occasional errors in the ads. Rollin Nickerson of Brandon, Vermont, pointed out to editor Ed Eastman, in a letter of August 21, that the artist made a mistake in the Gulf Refining Company's August 19 Farm Bulletin on page 5. "The tractor tire tread," said Mr. Nickerson, "is okay, but the artist drew the print of the tire on the ground just backwards from what it should be. It isn't often that a reader can find an error in your paper, but if you will look closely you will notice this very obvious mistake."

It is kind of fun to find mistakes in papers and magazines. But it's fun to be on the other end, too, writing and proofreading to try to make every issue letter-perfect. We want to know when we pull boners, so when you catch one, don't keep it a secret!

"Can ya imagine anybody SINGING in any of those?"

6-cylinder Ford Model F-2 shown has an 8-ft. Express Body mounted on a 122-inch wheelbase.

Says Vic Walz of Neligh, Nebraska

"After 100,000 miles I finally traded my old Ford for a new 6-cylinder Model F-2 Express. The new job performs even better than the old one. There's plenty of power when needed to get over icy and muddy roads. And its economy is saving me real money. You can bet my next truck will be another Ford."

"17 miles per gallon means I'm saving money with my new Ford!"

"I get a king-size load into my 8-ft. Express. And there's plenty of carrying-heft in the chassis." Payload capacity of the 96-in. long, 54-in. wide F-2 Express is over 1,900 lbs. on 7.50-16 tires.

"Power is never lacking for the biggest and toughest kind of a haul," Walz tells Ford Dealer Contois. Only Ford gives you a choice of V-8 or Six, four engines for over 175 models, 95-h.p. to 145-h.p.

"'Sunday-go-to-meeting' kind of a cab, too. Real riding comfort and style." Ford-welded, all-steel cab has Air Wing ventilators in door glass. Level Action cab suspension, lounge-type seats.

"I saved money on the low Ford price, and it's a cinch I'll save a lot more on gas, oil and repairs." Switch to Ford! Farmers everywhere find that Ford Trucks do more per dollar.

Ford Trucking Costs Less Because— FORD TRUCKS LAST LONGER

Using latest registration data on 6,592,000 trucks, life insurance experts prove Ford Trucks last longer!

FARMERS STEP UP PROFITS WITH "ON THE FARM" STORAGE

Sturdy, strong, fire-safe Quonsets enable farmers to take advantage of Government Price Support Program

Want to store—and condition—ear corn? Want to store shelled corn, wheat, oats, soy beans, cottonseed—or any crop—in one building, and still have room for truck or implements? It can be done in the versatile Quonset. Study the illustration above—simple partitioning of a Quonset makes it *right* for storage of a variety of crops. Quonsets permit you to hold crops safely for peak prices. Quonsets meet all CCC requirements for crop storage at a low cost per bushel. Get all the facts on this great farm building today!

Long Island Potato Men Say "No" to Government Controls

By Jared Van Wagenen, Jr.

OF ALL the misbegotten and ill-fated efforts of the Federal Government to control and stabilize the price of agricultural commodities, there is no other where the failure has been so dismal, and public criticism so vocal, as in the case of the Production Marketing Administration's potato program.

My first acquaintance with Long Island was some 40-odd years ago when I went there in Farmers Institute work, and I have been fortunate enough to go back again on a good many occasions. In early August, *American Agriculturist* asked me to go again to visit and talk with a considerable number of the best growers and find out just what was their reaction to government support prices and acreage controls. I confess that it is not easy to confine oneself to this particular topic. The Island has such a unique and varied agriculture, it is easy to be led off into writing about, say, ducklings or cauliflower or lima beans or irrigation.

In this project I was particularly fortunate in that for a guide and mentor I had Henry Talmage. I suppose he is the best possible man to have helped me. He was born on the Island 78 years ago, and for all but ten of those years he has lived on Friar's Head Farm four miles northwest of Riverhead. His memory goes back to the days when Long Island farmers typically grew three or five acres of potatoes which were dropped by hand, cultivated with a one-horse, wooden-beam cultivator and dug with a fork. All his life he has lived with this particular crop. He knows potatoes, as the saying goes, "up and down and back again."

Island Tries Scheme

Long Island has made trial of the scheme of controls and guaranteed prices whereby the gamble and the loss were to be taken out of the potato business and every man was to be assured of prosperity. Recently the growers in an official referendum voted as to whether this benevolent paternalism should be continued, and the plan was thrown out by a very decisive majority. Approximately 70% of the vote was in the negative. Apparently those who voted in favor were mostly small growers and newcomers. I went around looking for a grower who would emphatically assure me, "Yes, Sir: Acreage controls and price guarantees constitute a great forward step. All we need is a more complete and thorough adoption of the idea." Of course there must be some growers who think that way, because some 30 per cent of them said so at the referendum, but I did not meet up with one of these satisfied gentlemen.

I interviewed a considerable number of men on both the north and south shores, and their reaction without reservation was to the effect that they were sick and tired of the whole business and asked only to be left alone. Perhaps it should be said that the men I talked with were almost without exception long-time, extensive growers—men who had been pioneers and trail-breakers in the industry.

What is it that forms the basis of their opposition? I believe—and certainly hope—that it is the instinctive desire to return to the practice of free enterprise and to have done with any official telling you how to conduct your business—a thing that is naturally abhorrent to anyone reared in the American tradition.

It should be said, however, that two or three men—especially perhaps "Nat"

Since Mr. Van Wagenen wrote the accompanying article, in which he probes into the reasons for Long Island potato growers turning thumbs down on government support prices, potato growers in upstate New York and in Pennsylvania have voted against government control of their business by substantial majorities.

In the upstate referendum, growers voted against controls 1,181 to 441. In Pennsylvania they were opposed, 1,091 to 293. Percentagewise, New Yorkers were 72.8% opposed; Pennsylvanians, 78.8%.

It takes courage to turn down guaranteed prices and the so-called "security" offered in such programs. These potato growers are on the paths of freedom and independence trod by their forefathers in founding America. Their backs are to the Welfare State and its ugly brothers, socialism and communism. We are proud of their courage and leadership.

Talmage, son of Henry,—voiced the thoughtful conclusion that not all the ills of Long Island potato growing could be laid at the door of governmental interference. There are other troubles apart from controls. One is the unfortunate fact that there is a long-time and unmistakable decrease in the per capita consumption of potatoes. This simply reflects the changing food habits of our people. The city housewife is exhorted to save labor and, often as not, she is a pretty sketchy cook. More and more she is learning to order a package of frozen vegetable or a tin can of something-or-other rather than to bother to prepare potatoes for dinner. At any rate, in 1909 the annual per capita consumption of potatoes was 195 pounds. In 1949 it had fallen to 110 pounds. We dairymen may surely congratulate ourselves on having a product the per capita use of which steadily increases as the years pass.

Small Acreage

The largest acreage ever recorded in this country was the 3.59 million acres planted in 1934. This year the acreage is 1.9 million—the smallest since 1876. I believe there is no other major crop which has been called upon to make any such radical readjustment.

Long Island reached its maximum acreage (76,000) in the second World War. It is now between 52 and 53 thousand.

However, the fact that potato consumption is declining, that yields per acre are going up in almost unbelievable fashion, and that some years the

**For Power . . . Stamina . . . Economy—
Choose America's Top Truck Favorite!**

ADVANCE-DESIGN TRUCKS

Here's the "worker" you've wanted . . . the Advance-Design Chevrolet truck! It's the most powerful Chevrolet truck ever built . . . handles every job easier, faster, with utmost economy.

If you want a life-size picture of the ideal farm truck, watch these new Chevrolet trucks in action! To put it plainly, they're unbeatable. Chevrolet has never built a truck with so much power . . . with so much real get-up-and-go. They're sturdy, dependable, easy to handle . . . and they're *economical*. You save money every mile and every load with Chevrolet's low cost of operation and upkeep. And you save on purchase price too—get more for your dollars. Your good judgment will tell you that Chevrolet is the truck that belongs on your farm. See your Chevrolet dealer.

CHEVROLET MOTOR DIVISION, General Motors Corporation, DETROIT 2, MICHIGAN

PAYLOAD LEADERS

For low cost per ton mile, Chevrolet trucks are the choice of thrifty farm owners. Chevrolet's rugged construction and all-around economy cut running and upkeep costs—let you haul your loads with real reductions in operating expense.

PERFORMANCE LEADERS

On the hills or on the straightaway, the super efficient new Chevrolet trucks are miles ahead in performance. They give you high pulling power over a wide range of usable road speeds—and high acceleration to cut down total trip time.

POPULARITY LEADERS

Chevrolet trucks have led in demand and sales for the last eight consecutive truck production years . . . are far ahead again this year according to current registration figures. Here's convincing proof of greater owner satisfaction.

PRICE LEADERS

From low purchase price to high resale value, you're money ahead with Chevrolet trucks. Chevrolet's rock-bottom initial cost—outstandingly low cost of operation and upkeep—and high trade-in value, all add up to the lowest price for you.

Plus all these Advance-Design features: TWO GREAT VALVE-IN-HEAD ENGINES: the new 105-h.p. Loadmaster and the improved 92-h.p. Thriftmaster—to give you greater power per gallon, lower cost per load • THE NEW POWER-JET CARBURETOR: smoother, quicker acceleration response • DIAPHRAGM SPRING CLUTCH for easy action engagement • SYNCHRO-MESH TRANSMISSIONS for fast, smooth shifting • HYPOID REAR AXLES—5 times more durable than spiral bevel type • DOUBLE-ARTICULATED BRAKES—for complete driver control • WIDE-BASE WHEELS for increased tire mileage • ADVANCE-DESIGN STYLING with the "Cab that Breathes" • BALL-TYPE STEERING for easier handling • UNIT-DESIGN BODIES—precision built.

quick and lasting rust protection for your big investment

Farm machinery is important—it represents a large investment that will give you years of extra wear if you give it proper care. **THIS FALL** is the time to protect your valuable farm machinery from becoming winter feed for rust!

ESSO RUST-BAN 347—is easily and quickly applied using a rag, swab, or old brush to plows, cultivators, discs, and other implements... It forms a protective coating that helps prevent rust... provides money-saving, all-winter protection. Use **Esso Rust-Ban 347 NOW** and add years of usefulness to your farm machinery!

ESSO RUST-BAN 603—to help prevent rust attack on the insides of idle engines. Just the thing for that *all-important* tractor engine... forms a protective film on inside surfaces, gives a lasting coating to inner precision parts, provides dependable "lay-up" protection! Obtain directions before using.

Constant research by Esso helps develop better products for better farming—

ESSO EXTRA MOTOR OIL—for *Extra* engine protection... *Extra* oil economy in your car, truck or tractor.

ESSOLUBE HD MOTOR OIL—just right for heavy-duty diesel or gasoline tractor and truck engines. Dependable *all-weather* service for rough going.

ESSO EXTRA GASOLINE—Stepped-up with *Extra* power, for long mileage, high anti-knock performance under load!

ESSO TRACTOR FUEL—for "distillate" burning tractors. High power, efficient operation... low flash-point for faster starting.

ESSO STANDARD OIL COMPANY

A Visit With the Editor

By E. R. EASTMAN

FEW OF us really appreciate the debt that farmers and other citizens owe to research workers. Because few farmers have the time or the money to do very much experimenting themselves, they have to depend on trained scientists, both in public and private employ. Here is a review of some of the newest facts from studies and research reported by the U. S. Department of Agriculture:

High Production

In the last twenty years corn production is up 26%; cotton 58%; potatoes 68%; soybeans 59%; and oats 17%. That great increase in a comparatively short time could create a dangerous surplus situation, but is a safeguard in time of war.

Women Take Notice

In consumption we are shifting from high caloric foods, that is, the carbohydrates, and are eating more protective foods such as meat, fruits, vegetables, eggs and milk.

Of special interest to women is a successful U.S.D.A. experiment in canning vegetables by adding an antibiotic chemical called subtilin. This kills all organisms, retains germ-killing power in the presence of heat, and is not poisonous when taken into the system. This research work is still in the early stages and much remains to be done before it is ready to be used by the public.

Available now are tablets containing calcium chloride and salt which research workers at the New York State Experiment Station at Geneva have found to be very effective in home canning of whole tomatoes. This new practice gives a firmer canned tomato that can be sliced for salads, broiled, or scooped out and the center stuffed, especially welcome when winter's snow comes and anything that tastes like a fresh vegetable is all to the good. Enough of these tablets to put up 24 quarts of tomatoes can be obtained by sending 25 cents to the Mailing Room, Geneva Experiment Station, Geneva, New York.

Lower Milk Costs

In the Northeast, more and more farmers are using their good lands for pasture rather than trying to build up poor hillsides where cattle have to grow legs shorter on one side than on the other, and where they have to nose the stones around in order to get a bite of grass! The use of grass and legume mixtures is rapidly increasing and is

all to the good. Many scientists believe that improved legumes already available can boost forage crop production as much or more than the increase in grain production through hybrid corn. Intensive work is constantly going on to improve farm grasses, legumes, and field crops.

Insects on the Rampage

There are over 600 species of destructive insects, and this is one of the worst years for insect damage. Without insecticides, farmers could not stay in business. Without the scientists in commercial firms, colleges, and experiment stations, we would not have new and better insecticides.

Equipment Progress

No other branch of farming has seen faster improvement than has taken place in farm machinery. Manufacturers are giving special attention to equipment that fits our eastern conditions. Machinery attachments are now being developed that cultivate, apply fertilizer, and spray for weeds or insects, all in one operation.

Cattle Breeding

In 1950 three million cows will be bred artificially, which is almost 100 per cent gain in 10 years and represents 10 per cent of our present cow population. Researchers are working on the job to prove more bulls and do it more rapidly and accurately.

Milk as a Food

The most recent discovery about milk is that it is a rich source of vitamin B-12. Scientists are trying to find out how the cow obtains this vitamin.

Milk at 20 cents a quart is only 10 cents a pound. What other basic food could you buy for this price? To dairymen the price is only 5 cents a pound.

For Poultrymen

Preliminary results of feeding antibiotic aureomycin with yellow corn, soybean meal and vitamin B-12 produced 10 to 15 per cent gain in chicks, with the possibility of producing 3-lb. broilers in 10 weeks on 10 pounds of feed. That's two pounds less feed, and two weeks less time!

Are you an arthritic? Researchers have found that cortisone is helpful in controlling arthritis. The trouble is that the slow and costly process necessary to derive the chemical from animals makes cortisone too expensive. Intensive research is being done to try to get cortisone from certain plants.

A RUG FOR THE DOCTOR

By AGNES A. WARD

When Dr. Charles Stinard of Franklin, N. Y., asked his good friend and patient, Mrs. Laverne Whitbeck, to make a braided rug for his new home, he didn't know that henceforth he would be walking on many of his patients' wool pants, coats, dresses, scarves, etc. As soon as her neighbors learned of her rug project, they brought all kinds of discarded woolen clothes to Mrs. Whitbeck, who is shown above with the colorful and handsome circular, all wool, braided rug she designed and completed.

Although nearly 80 years of age and partially blind in one eye, Mrs. Whitbeck prepared all of the material for the rug—a colossal amount of work when you know that the rug is 8 feet in diameter! Mrs. Whitbeck has crocheted smaller rugs, but this was her first braided rug.

TWO WAYS TO SELL PEACHES...

Which pays farmers better?

This European peasant farmer grows some peaches—along with various other crops, all in small volume. He picks his peaches...carries them by basket to his town market place...sells them himself, direct to customers. Thus he receives *all the money* his customers spend for peaches. Yes, 100% of the customer's peach dollar belongs to him. But from this "one-man" marketing he can't begin to receive enough *money* for his peaches to afford improvement in crop quality, or to grow more peaches. Nor can he afford to *specialize* in peaches...because he has too many other jobs to do.

This American farmer grows more peaches per man-hour than a European peasant ever dreamed of. He grows peaches of fine quality, too, because he's located where peaches do fine, and he specializes in peach-growing. Railroads and truckers haul his peaches. Processors can or freeze some of them. Modern stores sell the peaches fresh, canned, frozen. The people who provide such marketing facilities are paid *with the grower* from the dollar customers spend for peaches. Yet the American farmer comes out way ahead of the European peasant in *actual money income*.

COMPARED to the market-it-yourself system, the American way sells many times more dollars' worth of peaches. American farmers can produce more efficiently—and they can specialize by crop or area—because modern marketing facilities are available to move their bigger, better production to customers.

True, growers here in America get less than 100% of the customer's food dollar. But...because there is mass consumption...they are able to farm on a mass production basis. Thus American growers receive *more money*.

The U.S. farmer's share of the food dollar spent for fresh fruits and vegetables today is around 40¢. This share drops to about 25¢ for canned fruits and vegetables. It hits around 28¢ for rolled oats, expensive to process...70¢ to 75¢ for good grade beef, butter and eggs.

The grower's percent of the food dollar varies from crop to crop because one crop requires more processing, cleaning,

grading or packaging charges than another. Or entails more service charges for storage, wholesaling or freight.

Bigger share of Safeway dollar goes to growers

Safeway's business is the *retailing* of food.

This function, you know, is sometimes lumped with other charges under the blanket term, "costs of distribution." But Safeway has nothing to do with farm-to-warehouse hauling costs. And in most of the processed foods, others—not Safeway—do the processing and packaging.

For all our retailing services — averaged over all farm crops — Safeway requires less than 14¢ out of the dollar customers pay for food at our stores.

This 14¢ covers all our costs of doing a retail business (such costs as wages, rents, taxes, advertising, etc.) plus a profit. In 1949 our profit was 1½¢ per dollar of food sales at Safeway stores.

Safeway costs are lower than average for such retailing services. In fact, our costs today represent a smaller part of the food dollar than Safeway required 10 years ago.

Of course, the dollar volume of our sales has increased, due in part to higher food prices. But our labor and other costs are up even more sharply. Chiefly because we've learned year by year to operate more efficiently can we return to farmers today *a larger share of each dollar of Safeway sales*.

The Safeway idea of selling more food per store and per employee isn't ours alone. We are in free competition with many stores working toward the same end.

It seems to us that is good for everybody—for farmer, customer and store man alike. We invite you to test our ideas of how a store should be run by doing your food shopping at Safeway, where almost one-fifth of all customers are farm families.

SAFEWAY STORES

ANOTHER \$500,000,000 WORTH!

A far-reaching program for rail transportation—designed to meet the rising needs of commerce and the demands of national defense—was adopted by the member lines of the Association of American Railroads at a recent meeting in Chicago.

As part of that program, the railroads have placed, or are in the process of placing, orders for more than \$500,000,000 worth of new freight cars. This brings the total spent on improvements in railroad plant and equipment since World War II to more than 5 billion dollars.

In the past ten years, the railroads have built and bought 600,000 new, bigger and better freight cars, 11,000 new Diesel units, and 1,700 new and improved steam locomotives, besides making great improvements in tracks, terminals, signals, shops, and every part of the railroad plant.

In addition, railroads are speeding up the return to service of freight cars awaiting repair, and are taking steps—with the cooperation of shippers and government agencies—to secure the maximum utilization of all available cars.

The program of the railroads is an essential part of any increase in national production—for neither in commerce nor in defense can America produce and use more of anything than can be hauled. There is no way in which the nation's effective hauling capacity can be expanded so quickly and with such small demands upon man power and materials, as by adding to the serviceable freight car fleet of the railroads.

In meeting transportation demands in World War II, the railroads enjoyed splendid cooperation from users of transportation, much of it organized and carried out through the Shippers Advisory Boards and their local Car Efficiency Committees; and the helpful assistance of an outstanding government agency, the Office of Defense Transportation. With this same sort of cooperation and with an opportunity to secure necessary man power and materials, the railroads will reach the goal to which they are pledged—adequate transportation for all America, in peace and in war.

When You Sell Apples “Don’t Fool the Public”

By Louis R. Savadge, R. D. 1, Morristown, N. J.

R EAD “Do You Know Your Apples?” (*American Agriculturist* Jan. 21 '50) with much interest because I was born and raised on an apple farm that had 32 varieties including Red Astrachan, Transparent, Duchess, Maiden Blush, Delicious, Wagener, Yorks, Baldwins, Rhode Island Greenings, Northwestern Greenings, Ben Davis, and Wealthy.

It was my lot from the time I was 12 to take a wagon and later on a truck and peddle these apples from house to house and to a few stores. I believe I received an education from pushing doorbells. I learned how narrow some people lived, and how free others were. I dealt with people worth millions and sold to others who didn't have fifty cents. I found in this mixture of young, old, wealthy, and poor a wide variety of tastes.

If I were selling apples to a housewife 60 or 70 years old, my first suggestion would be Baldwin, Spy, Wagner, or King. If I were suggesting a variety to a housewife 25 to 30 my first suggestion would be McIntosh, Delicious or some other mild variety. Our younger generation shuns the older varieties of Baldwin, Northern Spy, Greenings. There is a definite trend toward the new varieties. My mother was very fond of Grimes. We still have one tree. Likewise we have one tree of Newtown. But it is worth your life to try to sell these varieties because of their color. If they were red they would sell readily. The public wants red apples and not too deep red. The late Professor Blake at Rutgers told us in class one afternoon that “People eat with their eyes.” I believe he was right.

I have yet to know what an eating apple is. If a customer stops at my stand and asks for an eating apple, I ask such questions as: “Do you like mild, crisp or mellow apples?” I have the advantage over some growers in that I can fill the order for many varieties. My first customer of the day may ask for an eating apple and select Northern Spy. The next customer

would be utterly disgusted with my suggestion of Northern Spy as an eating apple and select McIntosh or Delicious. This has happened so many times I never brand any apple as an eating apple.

My father planted some Tolman trees that were sold to him for Baldwins. The crop from these trees was sold in Elizabeth market to a class of trade who considered them tops for eating. I have never found another market for Tolman.

When we talk of cooking apples we run into something a little different. Some families want apples that cook soft and creamy white while others buy apples that do not break down when baked. Only last summer I sold a customer a bushel of not quite ripe Fall Pippins. She liked them so well she came back for another bushel. She came to me with bad news about the second bushel, complaining that they cooked down too much when they were riper. As a contrast my sister won first prize for apple pie made from ripe Fall Pippins five years straight at the Morris County Fair.

Recently I read “The Commercial Apple Industry of North America” by Folger and Thompson in which they listed “For decline in Commercial Orchards:” Ben Davis, Northern Spy, Spitzenberg, King, Roxbury Russet, Hubbardson, Tolman, Belleflower, Stark, Fall Pippin, Wolfe River and several others. Those listed for increase in Commercial orchards were: Jonathan, Stayman, Winesap, Rome, York, Oldenberg, Grimes, Wealthy, McIntosh, Yellow Transparent, Arkansas, and Banana. It mentions that Delicious, McIntosh, Grimes and Winter Banana are in demand by fancy trade on account of their excellent dessert quality. The author goes on to say that Tolman deserves more consideration. I don't think he has tried to sell many yellow, sweet apples. I don't see why the build-up for Yellow Transparent. It is such a poor shipper. Yorks scald in ordinary

CHEMICAL WARFARE IN CAYUGA COUNTY, N. Y.

—A.A. Staff Photo

FLYING, so spectacular that it would have attracted thousands to one of the “air shows” of a few years ago, has been going on this summer over hundreds of Northeast farms—and it is so commonplace that there are no crowds. In fact, the farmer whose fields are being dusted or sprayed hardly glances up from his cultivating or haying as the steady-nerved pilot zips across a field at 90 or 100 miles an hour or climbs dizzily at the end of a field to miss trees, barns or power lines.

The airplane and helicopter have provided farmers with a method of controlling insects and disease after crops have grown too big for normal ground-operated machines. Aircraft also make it possible to plant row crops closer

together to increase yield per acre.

The above photo was taken on the Cayuga County, New York, farm of Wallace Terpening of Jordan as a plane dusted across a 14-acre field of peas to protect them from pea weevil. In addition to peas, Mr. Terpening raises yellow wax, green, and dry beans for the Comstock Canning Company. For several years the canning company has made use of planes to dust beans for Mexican bean beetle, but 1950 was the first year peas were dusted by plane in the area. The canning company checks fields they have under contract and, whenever necessary, arranges for the plane dusting. Mr. Terpening said that he pays half the cost of the first dusting but that if a second is necessary, it is paid for by the canner.

Small boys love to watch the mares and colts at pasture and to feed grass through the fence to the friendly colts on the Morgan Horse Farm at Weybridge, Vt. The insert shows a bronze statue of the original JUSTIN MORGAN, who died in 1821.

Shades of Justin Morgan

By VIOLET W. CHATFIELD

THE Morgan horse may yet disappear from the state which it helped to make famous and where it has been bred since 1789 unless state or private interests take over the operation of the U. S. Morgan Horse Farm which was granted funds for only one more year's work.

The farm located in Weybridge, Vermont, was a gift to the U. S. government by Joseph Battell, Addison County philanthropist. It is a mecca for equine-minded tourists, and any fine summer day finds its fences lined with small boys feeding grass to the sleek brown descendants of Justin Morgan, the original Morgan horse whose life-sized bronze statue graces the lawn of the farm.

Of two colts taken for a bad debt by an itinerant singing master of Randolph, Vermont, one grew up to a horse of amazing strength and endurance. He

early defeated many larger animals in neighborhood pulling contests and won great honor as the mount of President James Monroe at a parade in Burlington, Vermont, in 1816.

Named for his owner who died in 1798, Justin Morgan lived to a ripe old age and founded a line that made itself famous as the favorite of the U. S. Cavalry.

The Morgan Horse Farm was the center of a recent minor congressional storm when charges were made that the true Morgan strain was being corrupted and a demand was made for its closing. But after an investigation and through the good offices of Senators Aiken and Flanders, the one-year appropriation was made.

The present Morgan breed has its early speed and endurance, with added grace and polish, and is widely sought as a saddle mount.

Salting Pork on the Hoof

By E. E. TUSTIN, JR., Morton Salt Company

PIG feeding traditions die hard and one of them has been the unfortunate practice of denying a proper salt ration to the animal in the belief that the salt would harm the pig. Michigan State College estimates that more than 40 million pigs will be below par this year. This indicates that poor nutritional practices are still being carried on by a large number of pig raisers.

Before the days of experiment station work and quick distribution of information, farm practices were handed down unchallenged from father to son and, with respect to salt, pigs were made the goat. Salt was even thought to be poisonous, and so pigs were skimmed on elements essential to their growth and well-being. This unthrifty practice still hangs on with many pork raisers, stemming from the old careless feeding custom of throwing everything to the hogs, including the waste brine from cured meats—brine literally poisoned with nitrates, molds and waste animal matter.

According to N. R. Ellis of the U.S.D.A., "such practices as mixing salt with the mixed feeds in the slop barrel, dumping into the feeding troughs vats of old brine left over from the curing of meats, or adding to the feed batches of salt contaminated with unknown substances, should be avoided in feeding swine. Salt is so inexpensive that there is little justification for the use of waste products that might in one way or another be the cause of such cases of so-called salt poisoning as

do occur."

In a test at Purdue University with pigs salt-starved for 88 days, one hog ate as much as 9 oz. of clean salt in 48 hours. No sickness was observed in any of the animals.

Pigs need salt just the same as do the milking cow, the sheep, the steer, or the horse. Yet many swine raisers believe that salt is poisonous to swine, and religiously these folks keep salt away from their hogs. This is a losing business.

With production costs rising, experiment stations have made intensive tests with salt and various other mineral supplements with a view toward lowering the cost of raising swine. Results from nutritional research now enable pig raisers to obtain more pork from grains and feedstuffs than has been possible heretofore. This is important information because nearly a ton of feed is required to produce a 225 lb. market hog on good alfalfa pasture. Feed requirements in drylot are about 20 per cent more.

During a period of three-year tests, C. M. Vestal of Purdue University examined the effect of salt in making feedstuffs more productive, and came up with some remarkable results. Pigs receiving salt gained 2½ times faster than those without salt. For each pound of salt eaten, there were 45 extra pounds of gain. Each pound of salt saved \$5.60 worth of feed.

"The average daily consumption of salt for a pig was slightly over one-

September Farm Bulletin

This Month:

1. Something important for Fall
2. About storing tractor fuels.
3. An easy way to loosen bolts.
4. Keeping cows quieter at milking time.

1. Something important for Fall.

These Fall months will be plenty rugged on that tractor of yours. For with all the heavy work you'll put it through, plowing, harvesting and all, your tractor engine will build up heavy bearing pressures for hours at a time.

That's why it's just plain good "horse sense" to fill up with Gulfube Motor Oil. For this oil is especially designed with ample film strength to take heavy bearing pressure. It's refined from the finest paraffin crude oils by Gulf's exclusive Multi-Sol Process. It's been proved many times in field tests.

Pretty neat, too—when you buy 5 gallons of Gulfube Motor Oil, you get a 5-gallon utility can. It's a strong, all-metal can, complete with handle, spout, caps. Ask any Gulf Dealer.

2. About storing tractor fuels.

When fuels are stored in tanks above ground they should be protected from the direct rays of the sun. With lighter fuels, such as gasoline, the heat from the direct rays of the sun may cause excessive evaporation. Any shelter used for gasoline should be such as to allow free air circulation to carry off and prevent dangerous accumulation of fumes.

3. An easy way to loosen bolts.

It's amazing how little things can hold you up when you're hurrying.

That's why we make these suggestions. If nuts and bolts on your plow and other machinery start sticking, don't fuss over them—just pour a few drops of Gulf Penetrating Oil on them. This oil contains electrolytic graphite of microscopic particles. Loosens bolts fast. Lubricates, too.

4. Keeping cows quieter at milking time.

This is the month when the weather starts to get a little bite in it.

And as always, the chilly weather sends those pesky flies scurrying into the barn. Bothering and pestering cattle. Making your cows switch and fuss.

That's why we suggest that every morning and every night (right at milking time) you spray your herd with quick-acting Gulf Livestock Spray.

For this spray kills the flies and insects enveloped in its mist. Keeps many others away with its repellent action.

Used as directed, Gulf Livestock Spray will not spoil milk. Has no strong odor or taste. Will not burn or blister healthy cattle. Usual price only \$1.69 a gallon.

Profitable Listening

Lee Hamrick's

YORK STATE FARMER

over Rural Radio Network

each noon at 12:30 Monday thru Friday

Thousands of York State farmers in from their fields for lunch have been profiting from Lee Hamrick's up-to-the-minute interviews with farmers, agricultural leaders and men who have proven ideas for making farming pay. It's an informal lively half hour. It's easy profitable listening . . .

Now better than ever . . .

Associated Railroads of New York State have joined hands with agriculture to make the Tuesday, Wednesday and Thursday York State Farmer program even better for you. Rural Radio Network is proud of this railroad sponsorship . . . for the railroads operating in our state have served agriculture for 120 years . . . have been good customers of our farmers, and have been large taxpayers in every rural community in the state.

★ In many counties in New York railroad property tax payments are more than half of all property taxes collected.

★ Nearly 200,000 rural New York school children are educated each year by railroad taxes paid directly to schools.

★ The railroads in New York buy more than a quarter of a million dollars worth of our farm products each month for their dining car services.

★ There are more miles of railroad track in our state than the entire state highway system . . . a transportation network serving farmers and built and maintained by the railroads at no cost to taxpayers.

We welcome the railroad industry's participation in making even better Lee Hamrick's profitable listening York State Farmer program.

Big Oat and Wheat Yields Bring Seeding Problems

By George Serviss

BEFORE the introduction and almost universal acceptance of rust resistant short-strawed oats, it was my observation that hay and pasture seedings made with wheat averaged better than those made with oats. The oats in use at that time grew much taller than those in use today, ripened later and lodged much more frequently.

The advent of the combine aggravated the seeding problem with both grains because it resulted in later harvesting. The use of short-strawed oats has in my opinion made oats a better crop to seed with than wheat.

Today wheat yields are running substantially higher than they did ten years ago, particularly on the better farms. More fertilizer, especially higher nitrogen fertilizer, is being used and the trend is towards still greater use. This is sound, since it has resulted in profitable increases in yields. However, this increased use of fertilizer has resulted in taller straw and more straws per plant. This unquestionably reduces the light available for the seeding and also makes it more difficult for the seedling plants to obtain sufficient moisture.

What Can Be Done?

It is doubtful if we can consistently obtain good legume seeding with present methods where wheat yields exceed 40 bushels to the acre. Where wheat yields are below 30 bushels, we have a different problem. In these instances,

lack of lime or mineral fertilizers is the main cause of poor seedings.

What can be done to insure better seedings without sacrificing wheat yields? One possible answer rests with our plant breeders, and they appear to be aware of the problem. Perhaps a shorter strawed wheat would be as helpful in obtaining better seedings as short strawed oats have proved to be.

Second, some farmers for years have been seeding alfalfa in August (New York) or early September (New Jersey) after the wheat is harvested rather than on the wheat in the spring. This works well with alfalfa and also usually with ladino clover except on farms where late summer germinating weeds are a problem, chickweed being the number one offender. It does not appear to work so well with red clover. The chief objection to it is that it involves the preparation of a seedbed, and farmers are reluctant to adopt practices that involve extra labor.

A third possible solution is one that has been worked on by the Ohio Agricultural Experiment Station and is being followed up by others, and that is drilling the legume and grass seeding in rows with a light application of fertilizer directly under the seed. Some modifications will have to be made in the method or existing equipment before widespread use, but the idea appears sound. The legume and grass seedlings get off to a much quicker start and are much better able to withstand competition.

Sold on Birdsfoot Trefoil

(Continued from Page 1)

followed on the farm of Russell Young of Randolph. Russell has had birdsfoot for 6 years and now has 22 acres seeded, some for pasture and some for hay.

When it comes to evidence to convince a skeptic that birdsfoot is a wonderful plant for hill pastures, there is nothing better than a visit to Lee Bailey's farm near Cattaraugus. On a side hill 30 acres have been cleared of brush with a bulldozer at a cost of from \$5 to \$15 an acre, and, although it was tough going, the area was plowed and seeded. This was done because rather careful tests in previous years indicate that sowing birdsfoot on the surface, even after it is harrowed with a disk, does not give first-class results. Although this pasture has been grazed rather heavily, spots where there were droppings and the cows refused to eat give a vivid picture of the amount of feed grown on this side hill which was once practically worthless.

The fact that birdsfoot will grow on relatively poor land if it is adequately fertilized is one reason for its popularity, but more important is the fact that once established, it will last a long time, perhaps indefinitely. What is believed to be the oldest stand in the county is on the farm of Carl Chamberlain at Ischua. It has been down 12 years and is still good.

Another farm where brush was cleared off for birdsfoot is that of Lester Klahn and Son of East Otto. Lester says that ladino won't stay over 3 years and that birdsfoot is about the only crop for land whose principal harvest has been thorn apples. He has used 2 tons of lime and 600 pounds of 20% "super" per acre. Wally added that birdsfoot should have 300 pounds of 0-20-20 every other year or 500 pounds every third year plus a ton of lime every 5 years. On this farm the

rate of seeding was 3 pounds of birdsfoot and 6 pounds of timothy, and the seeding was done in June.

As farmers gain experience with birdsfoot, its peculiarities are more apparent. Here are some of the points which H. A. McDonald of Cornell suggests farmers keep in mind:

Points to Remember

1. Prepare a good seedbed.
2. Lime and fertilizer as for red clover.
3. Use a complete fertilizer when seeding, following an old grass sod.
4. Inoculate with the special culture.
5. Seed following a grain or tilled crop, if possible.
6. Seed preferably in early spring.
7. Seed shallow in a firm seedbed and cover lightly.
8. Seed not less than five pounds to the acre for hay or pasture.
9. Avoid surface seedings on old pastures.
10. Use in simple mixtures, usually only one grass and one legume.
11. Omit a nurse crop or seed it at a low rate.
12. Do not graze young seedling plants.
13. The crop may establish slowly, so give it time. (Wally tells me that he always reminds farmers who are trying birdsfoot for the first time that they shouldn't expect anything the first year. However, he said a good share of them do find that they do get a crop the first year and they are a lot more pleased than if he hadn't warned them and if they had been among those who got nothing.)
14. Manage birdsfoot trefoil as you would alfalfa for hay or ladino clover for pasture.

It is my guess that every year more farmers in Cattaraugus, and in other counties in the Northeast, will be trying birdsfoot and liking it.

The Question Box

I have heard that grass silage made from birdsfoot trefoil has a less objectionable odor than that made from other crops. Is this true?

There are many factors which affect the odor. Where a grass mixture has a lot of legumes and where no preservative is used, the silage is likely to have a strong odor. However, silage made from birdsfoot trefoil is, on the average, less objectionable in its odor. Incidentally, there is good evidence to show that milk from cows fed on birdsfoot will keep longer than from cows fed on other roughage.

It was very obvious in the summer of 1949 that some fields withstood drought conditions much better than others. It might help in future dry years if we knew why this was so.

There are at least three factors. First, the type of crop. A deep-rooted crop such as alfalfa will stay green long after shallow-rooted crops are dried out. Second, if the soil is sandy or gravelly, it will suffer from drought much sooner than clay soil. The third factor is the amount of organic matter present in the soil. This organic matter holds water for a long time and the higher the humus content, the better the resistance to drought.

How much lime is now being used in New York State? Has there been an increase, and is the need for lime in our soils being adequately supplied at the present time?

It is estimated that 620,000 tons of lime were used in New York in 1949. This is a big increase from 1930, when the figure was 192,000 tons. However, it is estimated that 1½ million tons per year are needed in New York State for maintenance alone.

Can birdsfoot be grazed or mowed the first year it is seeded?

Except to remove the weeds, it is usually better not to pasture or mow it the first year.

We have just built a new house made of brick and stone but we are having difficulty in heating it. Moisture seems to form on the inside of the wall. We would appreciate your advice in remedying this situation.

It is probable that the outside walls are cold and appear to be damp because of the high rate of heat transmission through the brick and stone in the outside walls. This would make the plastered surface of the walls cold, and that would cause condensation of moisture on the inside of the wall.

The best solution which I can offer would be to nail 2" by 2" strips on the present wall studs from the floor to the ceiling and then line the inside of the outside wall with some type of insulation board, ½" or 7/16" in thick-

ness, thus leaving a space approximately 2 inches wide between the insulation board and the present outside wall. This insulation board should be then given two coats of aluminum paint and any decoration procedure which you wish could be applied. Such an arrangement would get away from the high heat transmission through the walls and would make the rooms much warmer.

If you could drill a number of holes at the top and the bottom of the air space between the new inner wall and the original wall to allow for air movement behind the insulation board, this arrangement would be added insurance against moisture.

If the basement is unduly wet, you may wish to make some arrangement for drying out the basement, such as foundation drains or making provision for a sump pump.—P. R. Hoff.

It's Handy

Prevent Ladder Slipping

When a person standing near the top of a ladder reaches out to either side, the ladder tends to slip. This safety precaution is suggested by American Builder magazine:

Drive finishing nails in the ladder

as shown in the sketch. Cut off the nails ½ inch from the face of the wood and file the ends to sharp points. When the ladder is placed against a wall, the nails will dig in enough to keep the ladder from slipping but not enough to mar the wall surface objectionably.

An Easy Method of Moving Hogs

When you are moving hogs, especially stubborn ones, get the hind quarters in the right direction. Place a bushel basket over the animal's head quickly with your hands on either side of it. Using this method a person can usually steer a pig backwards to any place desired. — Victor E. Kerr, Tannersville, N. Y.

Painting Bolt Holes

When building gates or other outdoor equipment, I find it pays to paint the bolt holes. The easiest way to do this is with an ordinary snap bottom oil can. Start the bolt in a hole, and then apply a small amount of paint from the can. — Benjamin Hall, Hudson, N. Y.

Greasing Nails

When driving a nail through a hard board, I first dip the nail in grease, then rub the nail all over with grease. I then start the nail in the board as carefully as I can. The grease on the nail keeps it from bending over. — Walter Seeley, Jr., Smith's Basin, New York.

Over 25,000 Cows in 12 Northeastern States are fitted on

BEACON 2 POINT FITTING PROGRAM

1 To build reserves for high milk production CONDITION WITH BEACON FITTING RATION

This proved Beacon Ration is extra rich in minerals and vitamins. It does more than merely fatten the cow during the dry period. It helps produce a strong, vigorous calf — and a good reserve of energy and minerals for sustained milk production — both on a minimum amount of feed.

2 For easy calving FRESHEN WITH BE-CO-LASS

A light, bulky, laxative feed during the two weeks prior to calving. Helps avoid udder congestion, promotes easier calving. Provides a high Vitamin A level from dehydrated alfalfa and protects reserves built by Beacon Fitting Ration. On sale at your Beacon dealer's.

THE POWER SCYTHE CO. WATKINS GLEN, NEW YORK

1,500 Attend Gannett Farms "Neighbors' Day" Program

By L. B. SKEFFINGTON

THE day was hot and dry, a continuation of about the same weather as the previous three weeks, but the crowd at the annual Neighbors' Day at Gannett Farms, West Henrietta, N. Y., saw pastures nicely green and cows grazing in alfalfa 15 inches high.

The cows were harvesting the fifth crop this season. In early June, 11 to 12 tons per acre of grass silage had been taken off these alfalfa-brome grass-ladino clover lots. On Neighbors' Day, the herd was completing the fourth round of grazing. The clover was short, due to dry weather, but otherwise the stands looked good.

Our success with these improved pastures was due to a good seeding, proper fertilization, clipping and rotating. Sam Aldrich, Cornell agronomist, said the results spoke for themselves. He led discussion on practices. Last winter we spread about eight tons per acre of well phosphated manure, and immediately after taking off the grass silage we applied 175 pounds of 0-20-20. In alternate years we have been using 0-19-19 with borax. Herb Johnson, Monroe County agricultural agent, said it was difficult to get farmers to clip pastures because at the time it should be done there were many other things to do. He said it paid off in renewed growth and weed control.

Grass Insurance

We at Gannett Farms aim at having enough improved pasture to carry the cows through the hot months. This means that we have too much grass in early June, so it goes into the silos. We plant plenty of corn, some that may be either ensiled or husked. How much goes into the silos depends partly upon how much grass silage we feed out.

We began feeding grass silage August 19, because pasture growth was slow, due to drouth. We will refill the silos with corn, and the balance will go into the crib. Grass silage with us is surplus pasture grass put away to feed out when grazing is short. We still lean heavily on corn.

Cow Clinic Draws

In previous years the program has been an evening event. This year we had a continuous program from 2:30 until 11 p.m.

The "cow clinic," afternoon and evening, was something new. Chairmanned by Dr. Irving Bircher, Monroe County veterinarian, his staff included Dr. Myron G. Fincher, head of the department of medicine at the State Veterinary College; Dr. Harry G. Hodges, supervising veterinarian of the state mastitis control program; Dr. F. E. Reed of the East Aurora laboratory; Dr. John S. Proper of Honeoye Falls, Gannett Farms practitioner; Dr. S. D. Johnson, college field veterinarian, and technicians.

For three years the farm has co-operated in the control program, and Dr. Johnson's charts showed that "flare-ups" have dropped to a small fraction of what was found at the beginning of the program. He explained and demonstrated the practices which have helped to bring this about. Many dairymen present had opportunity to ask for information on their own problems.

See Erosion Control

Gannett Farms has had about 135 acres in strip-cropping since 1946. These contours and their effects on soil and water management were explained. Erosion on the slopes has been controlled, there are only one or two minor

seasonal wet spots, and most of the water that formerly ran off is now retained in the soil.

On the slopes, in addition to pastures, are strips in short rotations of corn, wheat and oats. Ryegrass is sown on the corn for a cover crop and mammoth red clover is seeded with oats, to be turned under the following year for corn. Professor Aldrich commented that with this short rotation, cover crops and use of manure, soil fertility has been maintained. I explained that for several years we have been improving fertility and texture of the soil and now are starting rotations that will include alfalfa brome grass and timothy for two or three years.

"Post-Graduate" Course

After a picnic supper was served to 1,200 guests, Frank Gannett extended a welcome and spoke of his satisfaction in having had a part in the progress of agriculture.

Dr. E. V. Moore, assistant commissioner of agriculture and markets, told of the remarkable achievements in animal health and nutrition in the past 25 years and predicted greater things to come.

I had commented that "we are not running an experiment station or a research project, but demonstrating how some of the results of research may be applied." With some modesty, I quote from Dr. Moore's address:

"Mr. Skeffington says he is not running a research project or an agricultural experiment station. In reality he is operating a post graduate course in both . . . The agricultural research people have shown us the know-how and made outstanding contributions to American Agriculture. We all know there are things that work experimentally but run into difficulties when used on an ordinary farm. Gannett Farms has been alert to the latest developments and has applied them in a practical way at the farm level. Its grass farming and contour farming are perfect examples.

"Skeff has been very fair in writing about new farm machinery, stating both the advantages and disadvantages that were observed. This has been an outstanding contribution to agricultural people."

Attendance 1,500

Fred Snyder, president of the Monroe County Farm and Home Bureau and 4-H Club Association, acted as master of ceremonies. He estimated total attendance for the day at 1,500. In addition to the educational features, there was music, square dancing and movies.

— A. A. —

F.F.A. CONVENES AT AMERICAN ROYAL

SOME 10,000 Future Farmers of America and 4-H Club Members will converge on Kansas City in mid-October for the National Conference of the F.F.A. and the American Royal Livestock Show. There will be F.F.A. delegates from 48 states, Hawaii, and Puerto Rico.

The F.F.A. conference will be held in the Municipal Auditorium October 9 through October 12. The 4-H Club conference of boys and girls from five mid-South states will be held October 15, 16 and 17. The American Royal gets under way Saturday, October 14, and terminates the following Saturday. The National Royal Livestock and Meat Judging contests will be held in the Royal Building on Friday, October 13. Judging of the F.F.A. and livestock entries will take place Saturday, October 14.

Why I Married a Farmer

A Partnership

Marriage, at its best, is a partnership and a sharing of responsibilities. This requires understanding and unity of purpose. This unity of purpose, I believe, can be found to a fuller extent in life on a farm than in other occupations.

It is possible for a wife to be a partner in the business of operating a farm successfully, and also to be a competent wife and mother, providing a satisfying home life for her family.

With more time-saving and labor-saving farm machinery and household appliances being discovered all the time, the drudgery is rapidly being taken out of farming. It is now recognized as an honored and scientific way of making a living, not a hit or miss mode of life as it was in the past.

The social life of a farmer and his wife is rich and full, enjoyed together in the Grange, Church, Parent-Teachers Association, and other places where they meet people with mutual interests.

For a full and satisfying life, give me the life of a farmer's wife.

—Lillian Dianna Carlin, Holmes, N. Y.

I Love the Guy!

There are so many reasons why I married a farmer that I *could* spend all day just naming them.

I was born on a farm but the most of my years were spent in the village. The farm won my heart because in the village I saw how other families lived, the husband going to work in the morning and seeing his family for only a little while in the evening and on Sunday. Such a system did not appeal to me. I like to have my man near me all the time and never tire of his company.

The children have a full-time dad, and it makes me sing to watch the close companionship between father and children as they follow in his steps while helping with the chores. We all share in the work and pleasures that go to make life on a farm and we all rejoice in the harvest that follows.

The above reasons are all important I know, and are found over and over in farm papers and leaflets. But the biggest reason of all is, "I love the guy."—Mrs. W. R. O'Dell, Walton, N. Y.

Beauty, Peace and Adventure

I married a farmer because I fell in love with one. I found out later that I must fall in love with farming, too, and that is just what I did.

To be married to a farmer is an adventure every day. Your whole life is a gamble with weather, crops and milk prices. Sometimes when I was first married, I wondered if it was worth it. Other girls had meals on time, new clothes, and new things for their homes, but one day I realized that I was living a great adventure. Cows and crops became more important than new furniture and new clothes. I put on overalls and worked side by side with my farmer, and I know why a farmer's wife has the best life in the world. She has interests outside the home without going to town to find them. She sees melodrama in the dairy barn without being a slave to movies or television. She sees beauty in a field of hay or corn growing for those dear animals that are like members of the family, if you take time to cultivate their friendship.

Yes, a farmer's wife has almost everything—beauty, peace, adventure, family—and of course hard work, but let me tell you in my experience she never has any money. Some day I may be able to add that to my list of blessings, but after ten years that lack hasn't dampened my enthusiasm for the job of farmer's wife and I hope it never does.

To sum up, some women may marry farmers because they like the country or animals or for security, but for me it was purely a romantic reason, and romance has grown stronger through the years along with a great respect for any man who is smart enough to be a farmer. —Helen A. Richardson, Montgomery, N. Y.

All I Dreamed Of

I had been living in the city, although raised on a farm until 18. As a child and teen-ager, I disliked farming, so it seems odd that the man I married became a farmer.

He told me that he intended buying a farm on a G.I. loan. Would I try it out and see how happy we would be working it together? I decided that if we could raise our vegetables, potatoes, and have our own milk, besides our own home, it was worth a try. Besides I'd been finding out how stuffy a city could be, with no grass or lawns, just sidewalks and streets, and houses next door. I was truly suffocated after so many years of room to roam in. The prices were so high, too, that I could not save a cent, and the rent would make a month's payment on a little farm. So I said, "Yes."

We have all I dreamed of and more. Two lovely children, a girl starting school, and a boy aged 3. We have our vegetables, milk, potatoes, our own meat, apples (and have planted pear and peach trees) and strawberries and raspberries too. We do our own carpenter work and plumbing. So far we have built two tile-lined chimneys, put in a pipe furnace (burns wood 36" long), put in bath and hot water, sided the house, and now we are building our own silo.

I can and freeze everything we have in the garden. Sure I'm busy, but who can say we haven't had fun doing things together? We love every minute of it, and it's been only four years the 29th of August that we decided to become "future farmers."

Farming gives a closeness with each other and with nature that we would never exchange unless necessary. Raising the food we do, we can understand the hardships of others. Neighbors are friendly in farming communities, whereas in cities you seldom know your next door neighbor. Farming is clean, healthy living, and I've learned to love it almost as much as my hubby. —Mrs. Vernon Bussino, Montpelier, Vermont.

P. S.: American Agriculturist has given us many helpful ideas.

Great Living

We have a hundred acre farm on the sunny hills of southern New Hampshire, with sheep, poultry, horse, cow, pigs, cats and dog for livestock, and apple trees and gardens, fields and woodlands that claim their share of our attention.

We have the best place in the world for a real partnership between mates and an ideal location for child rearing.

(Continued on Page 19)

For Your Home...

Thermopane made of plate glass. Ground and polished for maximum freedom from distortion. It's the quality of glass you'll want for greater clarity through the windows of your home.

For Service Buildings...

Thermopane made of sheet glass. The same insulation as plate glass, but more economical to use where appearance is not of prime importance. Made of finest quality sheet glass.

MORE SUNLIGHT and WARMTH with SELF-insulating windows

Use the winter sun to make your home cheerful and more comfortable, and to make your service buildings warmer and drier. Open your buildings to sunshine with generous areas of glass. To keep more heat indoors, use windows of *Thermopane** insulating glass. *Thermopane* makes windows self-insulating because it is double-glass—two panes with dry air sealed between them. You leave it in all year. No storm sash to bother with.

For Your Home

Thermopane gives you greater comfort. It saves fuel. And because its room-side surface stays warmer, steam and frost are far less likely to form. Your windows stay clearer in cold weather except under abnormal humidity conditions indoors.

For Service Buildings

Thermopane is proving its worth in barns, milkhouses, poultry houses and farrowing pens. *Thermopane's* insulating qualities permit the use of larger windows for more sunlight. That means added warmth and dryness—essentials for health of livestock and poultry. Less animal energy goes into heating the building—leaving more energy to produce milk, eggs and meat.

Thermopane is made in more than 80 standard sizes, as well as special sizes, for use in all types of windows. It is sold by glass and building supply distributors and dealers. Before cold weather strikes, find out what *Thermopane* can do for you. Talk to your Libbey-Owens-Ford Distributor or Dealer, or write us.

Long Island Potato Men Say "No" to Government Controls

(Continued from Page 8)

price has been very unsatisfactory does not in itself explain just why Long Island growers have by an unmistakable majority declared their opposition to governmental controls. What I wanted to know was the basis of their decision against the idea.

There are a number of factors. The first is that while the Island grows an unusual variety of crops, its agriculture as a whole is to a most unusual degree based on potatoes. There are extensive fields which have been continuously in potatoes for 40 years. These farms are, by our upstate New York standards of value, almost fantastically high in price. Now and then, at least, a man will pay \$1,000 per acre for a field which he covets.

Barring these unusual sales, Long Island potato farms seem to be standardized somewhere around \$500 to \$600 per acre. Bear in mind that this is not a speculative price based on the hope of soaring prices for suburban development. It is because men soberly hold that it is worth that for the growing of spuds. Surely it takes a good deal more than the proverbial "shoe-string" to make a beginning in potato farming in Suffolk County.

Big Investment

Then there is the investment in machinery. I will not attempt a complete inventory, but it runs something like this: a couple of tractors and a couple of trucks; a two-row planter and a two-row digger; a big spray rig, and for good measure some less important tools, and most likely a potato storage. On a conservative basis, these essentials will run to \$10,000. I fix on this round sum as the offhand estimate of two or three men whom I questioned. If he wishes an irrigation system, a deep 12-inch well together with a big capacity deep-well pump and a Diesel engine and the necessary mains and piping, it will run around \$7,500 to \$10,000. By the way, I was told that the Island has some 24,000 acres under irrigation.

We upstate New York farmers are not much accustomed to talking casually in terms of 60 or 80 thousand dollars, but this is a rough approximation of the capital investment of the Long Island farmer who plans on 100 acres of potatoes. In capital outlay and in probable gross returns, such a grower may be comparable to a dairyman with 100 milking cows—a size of dairy business which is not at all usual.

Now if a man has investment and operation geared to 100 acres and along comes a representative of PMA with marketing agreement all ready for his signature and says, "Mister: If you are going to share in the benefits of a guaranteed price, the first thing you must do is to agree to cut down your usual acreage by about 40%. Next year you will grow only 60 acres of potatoes instead of your former 100"—well, the grower does not like that sort of talk.

Idle Land Headache

In the first place he is all set to handle 100 acres, and if he plants only 60, it is certain that this very expensive equipment will be inefficiently used. But worse than that, what is he to do with his unoccupied 40 acres? I believe this causes more worry than any other feature of the acreage-reduction program. It is easy to tell him to switch to cauliflower or lima beans or Brussels sprouts, but even a small part of the abandoned potato acreage would absolutely demoralize the market for these very special crops. What happens is that this year the Island has a very considerable amount of both wheat and rye, but it is evident that growing these

non-intensive crops on land costing \$600 per acre doesn't make sense. I repeat that the question of what to do with the land where he has agreed not to grow potatoes is a headache and the most potent factor, I believe, in deciding the Long Island farmer to have done with any Marketing Agreement.

Then there are other and less obvious reasons. A North Shore grower, Leslie Wells, puts it this way, "Somehow or other, a guaranteed minimum price tends to become the maximum price. The 'floor' becomes the 'ceiling' as well."

One of the very outstanding men of the Island is J. C. Corwith, commonly known as "Pete." Along with his other dignities, he is President of the Suffolk County Farm Bureau, a one-time Appraiser for the Federal Land Bank, Member of the Farm Credit Board of Springfield, and a Director of the G.L.F. He makes his point thus (I quote his exact phrase): "It put a lot of sections far from market into the potato business." Too many men got the impression that Government had agreed to make all potato growers prosperous, and they decided to get a piece of this easy money while it was being handed out.

Price History

Long Island potato farmers have experienced plenty of financial vicissitudes. From the long-time charted records of a firm of potato buyers at Riverhead I culled two figures which are the economic landmarks of price history. In the spring of that roaring year 1920, which was just at the culmination of the post-war boom, their firm paid \$4.25 per hundred pounds. The all-time low fell in August, 1932, when the price was 42 cents. Between 1920 and today, the charted curve of prices is a jagged and uncertain line save for the one established fact that always the lowest price of the year comes in the month of August.

Potato growing along with orcharding has wide price swings and elements of uncertainty such as the dairyman is never called upon to experience. Just now, Long Island potatoes are not bringing the cost of production. But the solid fact remains that over a long period of years, the net results have been satisfying. In the end the crop has blossomed into some very fine farm homes and a gracious and cultured farm civilization.

The Island gave PMA a fair trial. Some of the best men in the industry were drafted for its administration but there were not enough of that caliber to go around. I was told that some of the underlings lacked both intelligence and tact, but compliance with the regulations was described as "fair."

As for myself, I am cheered and happy because an industry represented by men of unusual intelligence and experience has deliberately abandoned the primrose path of "planned economy" and returned to the ancient way of free individual enterprise.

KOROK DOORS

Swing open the 2-foot square door on a Korok Silo — you'll agree it was built for your convenience. Safe, handy Steplock draws door tight, yet lifts easily to release lock.

THE ACID TEST

... shows Korok tile stave silos best. They're acid-proof — not just acid-resistant. Rust and rot proof. Triple-sealed insulation gives real protection against frost. Longest life, minimum upkeep — that's real economy.

FROM THE Editor's Mailbag

(Continued from Page 17)

We all work together, play together and plan together.

Who but a farmer's wife can arrange her housework at all seasons so that when her husband needs her, she can be out in the garden, field, orchard or chicken pen? Who but a farmer is always handy when his wife wants a heavy piece of furniture moved or some help on the crank of the ice cream freezer?

Long days of hard work in the sunshine and lovely evenings on the porch listening to crickets and whippoorwills can't be beaten for real living. Short, snappy days, pitting our wits against Old Man Winter for the comfort of the animals and the family, and living richly on the canned and frozen foods of our own preparing—that is great living, too.

Why did I marry a farmer? Because I love him and the life he lives.

—Marion S. Conner, Henniker, N. H.

Music, Pictures

First, because I loved him; second, because I loved the country and farm life; and third, because I wanted my children to have the same happy childhood which I had on a farm.

Nowhere else could we have reared four boys and three girls and given them plenty of fresh milk, cream, butter, fruits, vegetables and eggs. Where else could they have had broad fields in which to run and play in the fresh air and sunshine?

In no other business do a husband and wife work together so closely to make a success of their venture, thus insuring a better understanding of each other's problems.

Contrary to popular opinion, farm life is neither monotonous nor lonely. Each season brings not only a change of work, but a change of scenery. The pale colors of spring, the deep tones of summer, the brilliance of autumn, and the white blanket and emerald trees of winter are a never-ending source of delight.

For music we have the songs of the birds. For pictures, I have seen goldfinches in pink cosmos, Baltimore orioles in full blown cherry trees, pink night moths on the yellow evening primrose. For thrills and excitement, the antics of the animals and children furnish us plenty.

What greater satisfaction can a woman have than that of working shoulder to shoulder, a fulltime partner with her husband in the job of producing food for the world?—Mrs. Jesse J. Sweate, Contoocook, N. H.

—A. A.—

LET'S SELL MILK!

(Continued from Page 3)

Think of the work to get the milk from the cow—the feeding and care of the cow; the investment in the farm, the dairy herd and the equipment; the care of the milk until it goes into the milk plant; the work of putting it through the plant. Then, we don't say to the public, "Come and get it;" we provide that extra service of putting the milk on the doorstep.

Are we going to solve our problem by cutting the price of milk? Did you ever read an editorial in a newspaper or hear the housewives' league, or any other group, express a vote of thanks when the price of milk is cut a cent? Every time we cut the price of milk one cent, we hand over to the public \$660,000 a day (sixty-six million quarts of milk at one cent a quart). Suppose we took that \$660,000 a day and put it into a good public relations advertising program. Then we would be doing something that would change the need for milk into public want of milk. Cigarettes did it; Coca Cola did

it; the dairy industry could do it with milk. So you see what I mean when I say there is a need for new thinking, fresh thinking, in the milk industry. There is need for imagination, a need for the dairy industry to believe in itself and its products and tell the public about it.

In gaining public confidence, we must remember that the public is not interested in the problems of the producers or the distributors. You can prove the case as to the cost of production and delivery of milk, and yet the public will say the price should be 12 or 15 cents a quart. Let us change our appeal and make them want milk. Let's begin to glamorize our product.

The Magic Bottle

Let us not talk so much about vitamins, or minerals, or proteins, or cal-

ories. I think we should put emphasis on more life in living and vitality. Be a DiMaggio, look good, feel good, have that schoolgirl complexion, have the vigor of the middle-aged and the stamina of the advanced-aged all come out of a bottle of milk. These are the things we need to emphasize. Our product gives us more material than we can possibly use in a salesmanship campaign for the milk industry. If we will only glamorize and apply the principles of salesmanship to milk it will take a little money, but not the kind of money the dairy industry loses every day when the price of milk is cut one cent a quart.

If we create the desire for milk in the minds of the kids so that the boys will hanker for it because they believe milk will make them great athletes and the girls will yearn for it to give them

pep and that glamorous schoolgirl complexion, they will see to it that their mother buys the milk. Since their income, she's the one to be influenced to purchase more milk for the entire family — youth, the middle-aged and the elderly.

These are some of the things the milk industry must do if we are to change the need for milk into the desire for milk. If all the agencies that developed our dairy industry will join together to make the public want milk, I am sure the demand for milk can be greatly increased. The public always has and always will buy what it wants. Public want and desire can be created by good business management, good publicity, and a good over-all public relations program. Coca Cola did it; cigarettes did it; milk can do it.

"That's some digger"

THIS DIGGER—a sturdy, lightweight tool that sinks a telephone pole hole in two to five minutes—has helped us put in more than 1,500,000 new telephones in Bell rural areas in the last five years.

It's an example of the modern equipment used by the skilled men who are busy extending rural telephone service. They do a good job—and do it fast—because they work with the best of tools and materials.

These men are backed up by the Bell Labora-

tories and the Western Electric Company. The Laboratories develop improved methods of providing telephone service. Western makes top-quality equipment for the local Bell operating companies.

It's a good team—one that's been adding 1000 telephones every workday in the rural areas we serve, while making real improvements in service. As a result, the proportion of U. S. farmers with telephone service is the highest in the world.

BELL TELEPHONE SYSTEM

This fellow was a "put-it-off". He knew better. But he didn't get around to erecting a MARIETTA silo to store that carotene-rich grass silage for winter feeding.

This winter, he'll get by as best he can but if he's wise, this will be his LAST winter without a MARIETTA. Farm records show that a MARIETTA silo pays for itself in two short years.

A MARIETTA Can Be Erected on your Farm for as little as \$15.92 per month

50 Years of Poultry Progress

By L. E. Weaver

IT MUST have been just about 50 years ago that my father brought home an incubator that was fearfully and wonderfully made. He was going into the poultry business. I was a small boy, but old enough so that I still remember the glass dome in which a small paddle wheel, partially immersed in some sort of liquid, revolved at intervals to pull up a chain that opened a vent to let out heat and keep the temperature from going too high. I recall, too, the ever-present odor of kerosene fumes in the room.

I don't remember that this complicated contraption ever hatched any chicks, but I do wish now that I could locate that early model incubator. It would make a hit, I am sure, at this year's NEPPCO Exposition. The theme of this show is "Fifty years of poultry progress." Many exhibits will feature the evolution and progress of the industry in one way or another. Old-timers like myself will enjoy seeing once more the small lamp brooders and incubators of the early days, and the models that show the steps by which we reached our present mechanized industry. Younger poultrymen should find a lot of interest and probably a few chuckles in these crude forerunners that the NEPPCO management is assembling for the Harrisburg meeting.

I can't give details about any exhibits except the one that I have had a part in planning. It is being put on by the eastern section of the Council of

Official Poultry Tests. We plan to show just how a standard egg-laying test is run. Two small houses with open fronts will be occupied by two of the top-ranking pens in NEPPCO territory, and these will be fed and trap-nested just as they were at the test where they made their records. It is very fortunate that all laying tests are ended just a week before the NEPPCO show opens. Instead of being sent back home at once, these two high-record pens will first be on exhibit at Harrisburg.

Also in the exhibit will be a chart showing year by year the average egg production at the laying tests from the year that the first one opened at Storrs, Connecticut, down to 1950.

Last year at NEPPCO I saw more of New York State's poultry people than at any previous exposition. Each year the number increases. I feel sure that the same is true of all the other states in NEPPCO territory, but because I don't know so many outside of our state, I can't be certain. If we can only get the word around about the unusually interesting and instructive exhibits of this year, Harrisburg won't be able to hold the crowd.

By the way, James E. Rice will be the guest of honor at NEPPCO'S 1950 annual banquet Wednesday, October 4th. For the first time there will be an advance sale of tickets for the banquet. Folks who plan to attend should write to NEPPCO at 11 West State St., Trenton, N. J., for an official banquet ticket order form.

RANDOM SAMPLE POULTRY TEST

THE first report of the Random Sample Poultry Test has been issued. It covers the four-month period from March 15 to July 15. Included in the report is a list of entries by breeds, a record of chick mortality and the average weight of pullets in each entry.

This test is being operated at the plant formerly occupied by the Central New York Egg Laying Test at Horseheads, N. Y. By removing partitions, the size of pens has been doubled so that there is room for up to 50 pullets in each pen. The 33 pens are occupied by 16 leghorn entries and 17 heavy breed entries. There are 7 entries of New Hampshires, 5 of Rhode Island Reds, 3 Barred Plymouth Rocks and 2 White Plymouth Rocks. Every entry came from a breeder who is improving his strain through selection on the basis of family performance. The way the sample of his stock performs at the test this year, therefore, should be a fair indication of what could be expected from his stock next year.

Each breeder sent 52 pullet chicks to the poultry department at Cornell in the middle of March. They were brooded at the College poultry plant in large groups and exposed to the Leucosis group of diseases. The exposure was more severe than chicks would face on most farms, but no greater than on some farms.

At four months of age the pullets were moved to Horseheads, sorted into their original groups and individually weighed. Only one lot still had the original 52 pullets. The numbers in other pens had been cut down to as

low as 42 in one pen, but not entirely by mortality. Errors in sexing with the removal of cockerels accounted for some losses, accidents took a small toll, and, as happens on most farms, quite a number were "missing on range" and were therefore unaccounted for.

Eleven of the 33 pens, or exactly one third, had had a mortality loss of three chicks or less. The list includes the following leghorn breeders: Burr's Poultry Farm in Pennsylvania; Spruce Poultry Breeding Farm in New Jersey; Heisdorf and Nelson in Washington, and Weidner, Gibber's, Babcock and Bulkley from New York. All but one from the Northeast. New Hampshire breeders in this low-mortality group were Westhill Farm in New York and Hubbard Farm in Massachusetts. Barred Rocks were represented by Rubenzahl Brothers in New York, and Cohen in Connecticut. Perhaps these early mortality figures are not of great significance. The heaviest losses from Leucosis often come after the pullets start to lay.

The report shows some interesting comparisons, or perhaps we should say "contrasts," between different breeds on average weights at four months. There is also a table showing what chief causes of deaths have been. These will be discussed in a later issue.

Anyone who would like to receive copies of the occasional progress reports of the Random Sample Poultry Test should drop a card to me at: Dept. of Poultry Husbandry, Cornell University, Ithaca, N. Y.—L. E. Weaver

MINRALTONE HELPS BUILD CHAMPIONS

Douglaston Lady Augusta. Only cow of breed to be classified as Excellent and have four Excellent daughters. One granddaughter sold for \$13,500—a record price for a Guernsey bred heifer. Another brought \$14,500—highest auction price for a Guernsey in 1949. A great-granddaughter sold for \$11,500, a record auction price for open heifers; and a half interest in a grandson netted \$15,000.

Famous McDonald Farms Herd Protected Against HIDDEN HUNGER*

The 1,500 acre McDonald Farms, Cortland, N.Y. has a wide reputation for the all-around excellence of its herd of purebred Guernseys, led by the great Guernsey champion, Douglaston Lady Augusta.

Mr. K. C. Sly, manager for J. M. McDonald, owner, has fed Hidden Hunger* fighting MinRaltone regularly since 1943. Mr. Sly says: "As a safeguard for the health of the herd, we have fed Near's MinRaltone for the last seven years. We use a combination of all three recommended feeding methods—free access, premixing and hand feeding."

What MinRaltone will do for one breed, it will do for all. Follow the lead of successful stockmen—feed MinRaltone regularly, year round. MinRaltone protects against Hidden Hunger* because it contains 11 essential mineral elements with Vitamin D. Write for free MinRaltone feeding booklet and complete details.

Front view of one of the five long houses at the former Central New York Egg Laying Test at Horseheads, N. Y. By removal of alternate partitions and closing every alternate door in the front there are now one-half as many pens but they are twice as large. The improvement of the new test over the old is largely in (a) larger samples, (b) samples taken at random as baby chicks.

Cold Pen Stable

By MARK ROBINSON

OUR DAIRY cattle are housed in a cold pen stable, a three-sided open shed with free access to an outside area where they receive their roughage and water. The biggest disadvantage of a pen stable has been that it required more bedding than the conventional stable. Our experience with a cold pen is that it requires less bedding than stanchions. The fact that the cattle spend about 16 hours a day outside, and drop about two-thirds of the manure outside, is mainly responsible for the decreased bedding.

The three-sided open shed is also much better ventilated than an enclosed stable with artificial ventilation. The result is less condensation to be absorbed by the bedding, and less rot and rust to the building. The cold pen ventilation is achieved by leaving off a wall, *which saves money*, instead of adding a fan, *which costs money*. At the peak of our open side is a flood light which we turn on before daylight for the morning milking. By its light,

At outdoor feeding rail.

a column of vapor as large as a car can be seen rising out of the stable.

The reduced bedding results in some labor saving. The biggest labor savings come from cleaning the barn once a year with a manure loader, and from bedding directly from the truck.

A possible disadvantage of a cold pen stable is the supposed waste of food used by the cattle in keeping warm. Prof. S. A. Witzel of the University of Wisconsin, who helped design our barn, suggested two sources of heat to keep the cows warm in cold weather. One was the heat from the manure pack, with which anyone who has cleaned a calf pen in rubber boots is familiar. Our cows lie down with their udders under them between the warm manure pack and their warm body. It is very different from the udder to the side position we were used to seeing in the stanchions.

The second source of heat suggested by Prof. Witzel was the rumen. I understood that to mean that the rumen could keep the cow warm. Dr. Enders, an eminent biologist, told me

several things that changed my mind. The cow *must*, rather than can, dissipate heat from the rumen, for the rumen to function properly. The only wild cow in her native habitat is in the Himalayan Mountains. The only fossil remains of prehistoric primitive cattle are in the Himalayan Mountains. Apparently the cow was originally a cold climate animal. This really explains to me why ventilation is important in any barn.

Cows Like Cold

One has to see the cattle in a cold pen to believe how well they like it. Our cattle are driven out of the barn at 4:30 a.m., because the entrance to the milking parlor is from the outside. The milking parlor entrance and exit were planned outside to keep the traffic off the bed. Wherever the bed has traffic, you have a wet spot. After milking, some cattle stay outside and some go in the bed. They are all out after breakfast, when they get their only feeding of silage. Most of the cattle stay out until nine or ten o'clock at night. We expected that in bad weather they would go out to eat from necessity and then rush back in the sheltered bed. We were astonished to have them stand out and chew their cud, and stand on the cold and windy corner. During one particularly bad storm we fed the cattle inside the pen. They went outside and bawled at the feeding rail. We fed them over again out there, wasting the feed inside.

We believe the cold conditions did stimulate the cattle to eat more roughage, averaging 100 pounds of silage a day. But they produced more milk from that extra roughage. Considering the cost of our imported grain and homegrown roughage, we believe we made milk more economically under cold conditions.

In the six months in which our cattle were stabled from the 22nd of October to the 22nd of April, we lost 2 cows out of 55 from mastitis. Both of these cows had long histories of trouble in earlier lactations. A number of others required treatment. In the same period, the average cow, average age 2 years and 5 months, in the average month performed as follows:

1,120 milk, 3.74%, 41.6 fat\$47.20
354 lbs. grain, 12-16%\$11.30
3,000 lbs. grass silage homegrown

Our DHIA average was 406 pounds of fat actual, and our average 2x 305 day, mature equivalent, will be around 500 pounds.

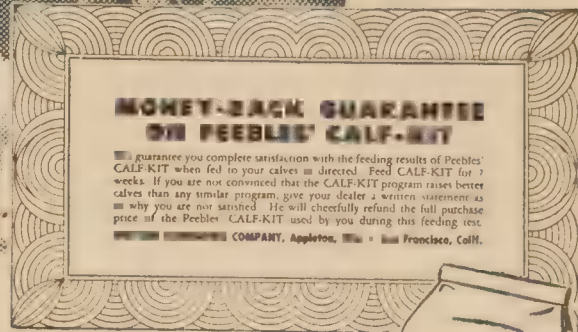

This best year of the last ten was not all due to a cold pen barn. Of greater importance were early cut grass silage as the only roughage, and progeny test breeding. Just how much credit belongs to the cold pen stable, we will never know because of the other improvements. We believe the cold pen stable gave the cattle better physical tone, and increased their roughage consumption, resulting in more economical production.

Milking parlor doors are at right of this open-end barn on Mark Robinson's Riverhill Farms, Tunkhannock, Pa.

Replaces Milk Safely!

Because it's made from Milk—98% Milk Serum Solids

Save up to 250-500 lbs. of milk per calf

Here's the milk replacement you've been waiting for! Peebles' CALF-KIT builds big, strong calves—with real milk-fed "bloom" and vigor. WHEN YOU SELL APPLES "DON'T FOOL THE PUBLIC"

(Continued from Page 12)

storage and in poorly ventilated cold storage. I can see little difference in the quality of Ben Davis and Romes. Yet one is ruled out.

There are so many apples and so many people with different tastes that it is really too bad those people with a mild apple, or tart apple or a sweet apple in mind cannot meet up with apples of their choice. I think this question of choice could be brought to the people by proper advertising. Why not tell people more about apples? Break down the mystery of what apple cooks well, what apple cooks lumpy, what apples are mild, and what apples are sweet. I believe the public would buy more apples if they could get the apple that best suits their appetite.

Only too frequently do we find road-stands selling King David for Winesap. Stores selling all red apples, regardless of variety, as Baldwins and all green apples, regardless of variety, as Greenings because their claim is "they sell better." I served a group of stores that did this very thing. It is little wonder that when a woman buys apples for Baldwins that do not cook, or lack taste, or cook uneven, that she steers clear of apples the next time and makes an orange pudding.

I have some suggestions that I believe will encourage the public to consume more apples: 1—More and better advertising; 2—Don't fool the public; 3—Give them apples they demand; 4—Put up an honest package; 5—Eliminate bruised fruit; 6—Grow better apples; and 7—Grow cleaner apples.

By J. F. "Doc" ROBERTS

RAINS over the Northeast, instead of dry, hot weather, have again changed our livestock picture. The long-term forecast is for a warm, late fall.

Now that we will have pasture grasses and afterfeed, no animals will be forced to market—a grand thing if we don't overdo it by marketing too many of our animals all at once with the first heavy frost or light snowfall. The Midwest and the range country have also had rain, so grass is abundant everywhere.

This weather situation is causing many predictions of heavy livestock marketings in October and a lower market. But again, if the war situation does not greatly change, it is going to be next to impossible for prices to break. With anything like an orderly marketing of our livestock, prices are not going to break. The feed that is on hand in the Northeast this year should prevent any livestock from being marketed on a breaking market even if shelter of some kind has to be provided.

Congress seems to have no idea of "tightening its belt," with increased billions for "normal" expenditures and money for everyone. Labor is going after and getting its fourth or fifth round of wage increases. Now add war expenditures to this and nothing spells out lower prices.

The only low prices we are seeing, or probably will see, are on farm products which the government has "played" with and run up surpluses of, such as potatoes, eggs, butter and grains. The war may again bail the government out of these.

Nothing Is "Free"

It has been encouraging to see the potato men of New York and Pennsylvania vote to throw out government controls. Today farmers wouldn't be taking lower prices if false bottoms had not been placed in many farm product baskets. That "something for nothing" lure only resulted in a lot of false increases and unwanted production which are now going to cost far more than any group of farmers received, although they thought they were getting something "free."

My hope now is—that whatever is in the book for controls—floors, ceilings, etc.—will leave the farmer completely out. He will produce the food; he has

proved that, both in war and in peace. The thing all our politicians seem to forget is that after he produces it, he has to sell it the best way he can. What could be fairer, freer, or more democratic?

Animal Psychology

Do you make the new animals you bring on to your farm feel "wanted?" Isn't that ridiculous! Or is it? Have you ever noticed that a good livestock man will keep an odd cow or cows he brings home around the barn or barnyard for a day or two before he turns them out with his other cows? Or that the cattle or lamb feeder will putter around his animals and then feed more the first few days he has them than at any other time? There are sanitary reasons for segregation, but consciously or unconsciously the owners are trying to make those animals feel "wanted," even as you or I. They have learned that the way animals are handled the first few days is more important in their doing well than at any other time.

— A. A. —

SALTING PORK ON THE HOOF

(Continued from Page 13)

third of an ounce," says the latest Purdue report, which further states, "Keeping salt before the hogs where they can have all they wish at all times is good practice on the farm today. The pigs in the salt experiments had loose salt in a weather-protected box-feeder where they could help themselves at all times. This plan of feeding eliminates any danger of salt-hunger and its attendant bad results. Hogs need but little salt and eat small amounts when they have regular free access to it." Tests at the Iowa station showed the most economical gains were made when the pigs had salt before them in a self-feeder to eat whenever they wanted it.

Other Minerals Help

There is a benefit from the use of trace mineralized salt, as it supplies iron, copper, cobalt, manganese and iodine, which may be lacking in the feed. Where iodine shortage in the forage is acute, it shows up in goiter and hairless births. The loss of young because of lack of iodine in the sow's ration during gestation is greater among swine than among any other class of livestock.

Hogs furnished a well-balanced ration with adequate minerals are less likely to root than those on a mineral-deficient ration. This was pointed out by John Zeller, in charge of swine investigations for the U. S. Bureau of Animal Industry. Pigs root in an endeavor to get copper, cobalt and iron, a deficiency of which results in anemia or lack of red blood cells. Anemic pigs usually have little appetite, are weak and inactive, and in severe cases breathe in a labored manner, commonly described as "thumps." Traces of manganese, too, are wanted by the sow for best bone growth and milk flow.

The cost of feed accounts for over three-quarters of the expense of producing pork, and the good feeder who is interested in maximum production will provide his pigs with the salt and the minerals they need for quick and healthful growth. Allowing pigs to take trace mineralized salt free-choice helps bring home the most bacon.

— A. A. —

The farm woodlot is getting more attention these days as a producer of income, and in some areas the same is true of the maple sugar bush. In either case, an important point in management is to fence cows out of the woods. They get little pasture anyway, and it doesn't take a very strong fence to discourage them. Keeping cows out allows young trees to develop for replacements when mature trees are cut.

Fifteenth Annual Sale

The Vermont Jersey Cattle Club

HARTLAND FAIRGROUNDS

HARTLAND, VERMONT

SEPTEMBER 26, 1950

50 Head of "VERMONT QUALITY" REGISTERED JERSEYS

PUTTING up a boxed lunch every morning—perhaps two or three—is a real task, especially when there's breakfast to prepare and the children to be gotten off to school. Fortunately, many schools have taken over the job of supplying the children with a nutritious noon meal, but there are still many homes where lunches have to be carried by Bobby and Mary—and perhaps by Dad, too. If your home is one of those, do you find yourself racking your brain each morning for ideas and hunting here and there in your kitchen for the thermos, the lunch box, and the food supplies?

Plan A Production Line

You can start out right this fall if you plan a school lunch production line right in your own kitchen. Devote to this job a few shelves, work space or a bread board, or perhaps a kitchen drawer or two where you can have everything you need in one place. If possible, plan a spot near the refrigerator so that you will have easy access to the milk, fruit, lettuce, vegetables and leftovers. If your bread box isn't in this area, you might keep a loaf of bread just for the sandwiches in the refrigerator.

On your available shelves or drawers, plan to keep, in the order in which you will use them, the lunch boxes, thermos, food containers, mix bowls, needed food supplies, paper napkins, wax paper, some silver and equipment. If your counter space is limited, try a pine board to fit snugly on the top of a partly open drawer. This production line technique will be worth a great deal to you in the time and effort it will save you every morning.

Use Your Freezer

If you have a freezer, add it to your production line. Sandwiches can be prepared and kept two to three weeks in the home freezer. Fillings also can be made at a convenient time (when you have leftover roasts, chicken, etc.) and then stored in a covered jar in your freezer. Place a number of well wrapped and labeled sandwiches together in a box, as this makes for compact storage and they are easy to find. The sandwiches can be removed from the freezer in the morning, put in the lunch box, and be ready for Bobby and Mary to eat at noon.

When making sandwiches to be frozen, spread with softened butter, but avoid mayonnaise, salad dressings and jellies as they soak into the bread. Leave out lettuce, carrots, tomatoes, etc., as they lose their crispness, and can be added when the sandwich is eaten. Hard-cooked eggs freeze better when chopped than when sliced. Be

LUNCH BOX GUIDE	
 <p>MILK</p>	<p>MILK ALWAYS in the lunch box, in one form or another: milk to drink, or in creamed soups, custards, rennet desserts, puddings, cocoa, or cheese. Every child and every adult needs it daily.</p>
 <p>BREAD</p>	<p>BREADS of all kinds, rolls, crackers, and butter. Be sure the bread is made from whole grain or enriched white flour, and vary the sandwiches by using a variety of breads. Everybody likes a change.</p>
 <p>MEAT · POULTRY FISH · CHEESE or EGGS</p>	<p>MEAT, cooked or canned; fish, chicken, cheese, eggs, peanut butter. If you're in a rut, consult the "15 Sandwich Ideas" on this page. Keep sandwiches moist by wrapping each one in heavy waxed paper.</p>
 <p>FRUIT and VEGETABLES</p>	<p>Be sure to include a FRUIT and VEGETABLE—or at least one or the other. Raw fruit, dishes of canned or cooked fruit. Cooked vegetables packed in small jar, or raw vegetables—carrot sticks, celery, cole slaw, tomatoes, raw relish, or lettuce to add to sandwiches just before eating.</p>
 <p>DESSERT</p>	<p>Everybody likes something especially tasty at the end of a meal. Cakes, cookies, puddings, and pies that will carry well, are good boxed-lunch desserts. And then add a little "surprise" just for the fun of it. (See suggestions on this page).</p>

sure to wrap sandwiches well in moisture-vapor-proof material. You will find plenty of good freezer wraps on the market.

A Measuring Stick

Make Bobby's and Mary's lunch a well-balanced meal, especially if they eat a hurried, inadequate breakfast or miss the family's hot dinner at noon. The chart on this page is a good measuring stick. Why not hang it on your cupboard door as a constant reminder? Avoid too much repetition—plan enough for growing bodies—encourage good food habits.

Keep the lunch box in mind when planning other meals so that you will not need to buy special, expensive foods just for the packed lunch. Let the children share in the planning, and

and Mary use their nickel or dime to buy the needed hot dish and not the candy, coke and desserts that may be there to tempt them.

Milk an Essential

Milk is an important essential for every lunch box. If the small fry dislike milk (and I hope they don't!) plan a variety of ways to get that milk in. Cream soups, cocoa, custards or the addition of fruit juices, tomato juice, chocolate or other flavorings to the milk will often do the trick. Here are suggestions:

MOLASSES MILK DRINK—Mix together 2 cups milk, 2 tablespoons of molasses, and a dash of nutmeg. Makes 2 servings.

FRUIT MILK DRINK—Dissolve two-

thirds of a cup of sugar (or less) in 2 cups of orange juice, pineapple juice, or any other fruit juice, and chill. Pour slowly into 2½ cups of cold milk. Shake vigorously before serving. Makes 6 servings.

SPICED MILK DRINK—Add to ¼ cup boiling water ¾ teaspoon of cinnamon with a dash of nutmeg or mace. Add to this 4 cups of milk. Stir vigorously. Sugar may be added if desired. Serve hot or cold. Makes 4 servings.

TOMATO MILK DRINK—Combine 1½ cups milk, 2¼ cups tomato juice or less, and ½ teaspoon salt. Blend thoroughly. Sugar may be added if desired. Makes 4 servings.

Surprise Them

A little surprise now and then tucked in a corner of the lunch box creates interest in eating a good lunch, gives variety, and peps up the lunch box. For example, "sweet surprises" like these:

Colored marshmallows
Popcorn balls
Chocolate raisins or nuts
Cut-out cookies
Candied orange
A piece of candy
Banbury tarts
Jelly tarts

Or something to munch:

Ripe or stuffed olives
Carrot sticks
Stuffed celery
Radishes, raw cauliflowerettes
Potato or corn chips
Pretzels
Dried figs, apricots, prunes, raisins
A small bag of nuts
Stuffed dates or prunes

On very special days, add a greeting card appropriate to the occasion, a funny picture, a small toy, a new pencil, a balloon, a few marbles, or a pin for the lapel.

15 Sandwich Ideas

Since sandwiches are the mainstay of the packed lunch box, let's not be monotonous and humdrum. Here are 15 sandwich ideas to add "the zip that makes the dif":

1. Ground American cheese, chopped olives or pimento, mayonnaise.
2. Cream cheese, or cottage cheese, chopped bologna, pickle relish.
3. Peanut butter, chopped bacon, catchup.
4. Peanut butter, applesauce, chopped dates.
5. Sliced bologna, cole slaw.
6. Cottage cheese, canned ground ham, pickles.
7. Egg, chopped canned cornbeef, pickle.
8. Egg, chopped frankfurters, chili sauce.
9. Sliced or chopped meat loaf, pickles or olives, mayonnaise.
10. Chopped frankfurters, baked beans, catchup or mustard.
11. Chopped dried beef, minced onion, mayonnaise.
12. Deviled ham, cream cheese, catchup.
13. Tuna, chopped apple, mayonnaise.
14. Salmon, chopped cucumber and onion, mayonnaise.
15. Simmer 1 can tomatoes, 1 tablespoon minced onion, add ground American cheese, ¼ lb. dried beef, butter, salt and pepper, 1 egg, cook and store in jar.

WE CHALLENGE EVERY WOMAN TO TRY NO-RINSE WASHING NOW!

PROCTER & GAMBLE'S NEW, PATENTED

cheer®

Latest, most remarkable No-Rinse product! Specially made to assure bright, clean washes without rinsing

If you doubt that you can get clothes *clean* the no-rinse way, we dare you to wash your clothes with CHEER—*without rinsing!* We dare you to try CHEER *just once!*

With Procter & Gamble's new CHEER, no-rinse washing becomes *really dependable*. Specially made for timesaving, worksaving, no-rinse washing, CHEER *guarantees* you the cleanest possible no-rinse wash!

CHEER floats dirt out of your

clothes and *holds* it in the wash water! When you wring out your clothes . . . out goes the dirt! The wash is beautifully clean, dries soft, irons easily.

NO NEED TO WEAR A TRUSS FOR RUPTURE

That Binds, Cuts, Gouges, Slips and Does Not Hold

If you must wear a Truss for Rupture, don't miss this. A Post Card, with name and address, is all you send to W. S. Rice, Inc., Dept. 65-M-13, Adams, N. Y. to get FREE, and without obligation, the complete, modernized Rice Plan of Reducible Rupture Control. Now in daily use by thousands who say they never dreamed possible such secure, dependable and comfortable rupture protection. Safely blocks rupture opening, prevents escape, without need for bulky, cumbersome Trusses, tormenting springs or harsh, gouging pad pressure. Regardless of how long ruptured, size, occupation, or trusses you have worn. TRY THIS, and send your Post Card today.

START WHEN THEY'RE BABIES

By LOUISE PRICE BELL

TOOTH-BRUSHING won't seem so much of a bore to youngsters if mothers start when they are mere babies to take routine care of the tiny teeth. Swabbing the infant's mouth with sterile cotton, later using a wee, soft brush that the tot may be able to use himself is a good way to start. The little ones will get to feeling that cleaning their teeth after eating is almost as important as the eating itself!

When the youngsters are old enough to understand, it's a good idea to print, write, or type a set of rules and tack them on their bedroom wall. In one home, the seven-year old twins of the family made an attractive "reminder poster" by pasting pictures of children brushing their teeth on a large white cardboard. They had cut the colored pictures from magazines, mostly from toothpaste advertisements... and the poster was actually a decorative addition to their room. Their rules read like this:

1. We should brush our teeth after

—Photo Bell-Tuscon

every meal.

2. We must brush our teeth before we go to bed.
3. We should brush "up and down, round and round."
4. We should brush our gums way back in our mouth.

Perhaps the children in your family will want to copy this idea!

Patterns in Plaid

No. 2270. Combine this smoothly styled jumper done in the newest tartan with the cuffed wool jersey blouse! Sizes 10-20. Size 16, jumper, 2½ yards 54-inch; blouse, 1½ yards 54-inch. No. 2045. This attractive, pocketed dress done in crease-resistant cotton plaid will be perfect for school and after. Sizes 6-14. Size 8, 2½ yards 35-inch, with ¼ yard 35-inch contrasting. No. 3096. This year it's the diagonally closed coat dress, with hip-spanning pockets punctuated by matching buttons. Sizes 12-20, 36-44. Size 18, 3½ yards 54-inch; or 4½ yards 39-inch. No. 2811. Cozy hooded coat combines with its companion attraction—a scallop detailed panel front dress! Sizes

1, 2, 3, 4. Size 2, coat and hood, 1¾ yards 54-inch; dress, 1½ yards 35-inch. No. 2169. For bib-top coverage on the kitchen front, try this minimum yardage apron with a slim panel front... two-button closing in the back! Cut in one size, only 1 yard 35-inch fabric required. TO ORDER: Write name, address, pattern size and number clearly. Enclose twenty cents (in coin, check or money order) for each pattern wanted. Add 20 cents for our new Fall-Winter Fashion Book which has over 100 smart, easy-to-make pattern designs for all ages, sizes and occasions. Send to AMERICAN AGRICULTURIST PATTERN SERVICE, Box 42, Station O, New York 11, N. Y.

BETWEEN SEASONS

By Edith Shaw Butler

Now along the roadside
Goldenrod turns yellow,
Elderberries darken,
Early apples mellow.

Now a happy goldfinch
Brings his mate to feed
On my painted daisies,
Long since gone to seed;

And Summer wears late gardens
Like a gypsy shawl
Gathered close about her
As the first leaves fall.

African Violets Cause Writer's Cramp!

(Editor's note: The following letter from reader Bernice B. Stanhope of Dundee, New York, explains why she has written the accompanying item regarding the amount of sunlight needed by African Violets. It was written to save her writer's cramp!)

Dear Sirs:

Since advertising in *American Agriculturist*, I have answered questions by the score about African Violets. If you have any idea that women don't read your paper, banish the thought. I've had more response to that one ad than all the rest combined. Judging by the letters I receive, these women depend on articles in papers such as yours. Whoever made the statement that people in the Northeast weren't friendly never had letters from these ladies; if they had they wouldn't worry about friendly feelings between people!

The letters ask about disease, rooting, varieties, etc., but at present the light problem leads all questions. It would help save one grower a few writer's cramps if you would publish these few facts about light for African Violets that I have learned from that gruff old instructor, Experience.

LIGHT FOR VIOLETS

African Violets grow wild in dense shaded jungles. Sunlight reaching them is filtered through trees and vines. Our first job in growing this modest little plant is to duplicate these conditions as nearly as possible. They love a good strong light but no hot sun. That's why a north window is ideal.

Without a north window, we can grow them in a south window just as well but we have to work harder. This past week I have placed thin white curtains over my windows but the hot sun has already burned some of my plants.

The leaves develop places that look burned and seared; the petals of the bloom have round spots where all colors disappear as completely as though drops of bleaching material were used. Sometimes the whole plant will have a bleached, pale green anemic look. In such cases reduce the amount of light on your violets. As the sun grows stronger, thicker curtains or Venetian blinds may be used.

A simple home test may be made to determine the correct amount of light. When the sun is brightest, hold your hand between your plants and the light. If your hand produces a sharp, distinct shadow, the light is too bright. If it makes a blurred, indistinct shadow, the light is just right. — Bernice B. Stanhope.

— A. A. —

"When the garden is getting towards the end, gather all the leavings; shell the beans, cut carrots, onions, tomatoes and squash in small pieces. Pack in jars with a slice of tomato at the top. Salt as usual and process as you do string beans. Serve as a casserole with hot mashed potatoes or hot biscuits on top." — Alice M. Green, Chateaugay, N. Y.

It's a good feeling to see your Public Health Nurse arrive, smiling and confident, when you're in need of her help!

Our Public Health Nurse

By MARGARET AIKENS

I WONDER if we all realize the wonderful work the County Public Health Nurses are doing. Ours is certainly doing a splendid job. I never thought much about the Public Health Nurses until our nurse, Miss Bernice Peters, appeared at my door one day and began being helpful.

Miss Peters is the Public Health Nurse in our Chautauqua County, N. Y., district, which consists of six townships with a population of about ten thousand. There are three other Public Health Nurses in the county. They are hired by the Board of Supervisors and their wages are paid from tax money.

Miss Peters told me that they have so many and such varied duties that it was hard to remember them all.

For their "visits" they get lists of patients from the doctors in their territory. They can visit a patient only twice unless he regularly goes to a physician. The Public Health Nurses are interested in better health for everyone. They stress proper foods and immunization. They class their patients in the following divisions: Infant, Pre-school, School children, and Adults. They are interested in new mothers, T. B. cases and contacts, Venereal diseases, communicable diseases, non-communicable diseases, and general health supervision.

Babies, Too

If you are a mother-to-be or a new mother, the Public Health Nurse will visit you and bring you bulletins published by the State which contain helpful suggestions and advice. The nurse will answer questions about your own health or that of the baby. She will show you how to give the new baby his bath and how to take his temperature if he should become sick. Our Miss Peters has a little spring scale on which she can weigh the baby.

Miss Peters says, "I always keep my 'weather eye' open on these visits to see if anything is wrong." If there is something wrong with your baby, be sure to let your Public Health Nurse know. She knows where and how to get help. Operations of a serious nature, like for a cleft palate or a heart operation for blue babies, may be paid for out of State funds in New York State.

Miss Peters holds clinics for pre-school children, where height and weight of the children are checked by the nurse and the children are examined by an attending physician. Immunization shots are sometimes given at these clinics.

Miss Peters visits schools which do not have a paid school nurse. She says she doesn't have time to do much but test the children's eyes.

Actual bedside care is supposed to be only on a demonstration basis, but once in a while there is a case where no other

help can be procured immediately and the Public Health Nurse has to fill in until help can be obtained. Miss Peters says she doesn't like to do this because when she goes to one place too much, it upsets her already full schedule and she has to by-pass someone else.

Mom Says:

"DUNGIES ARE A GOOD IDEA."

("MOM SAYS" is a new department in AMERICAN AGRICULTURIST in which readers are invited to express their thoughts on any subject which interests them. We are starting it off with Mrs. Martin's argument in favor of blue jeans for schoolgirls below the High School age.

If you feel the urge to write a short article or letter on a subject dear to your heart, send it to Mom, AMERICAN AGRICULTURIST, Box 367, Ithaca, N. Y. \$2.00 will be paid for any articles we print. Your name will be signed to your article, unless you request us to withhold it.)

ARE YOU one of those mothers who frown upon dungarees on girls for school wear? I used to be. And I'll admit it took a long time of pleading from my two daughters, aged six and eight, before I finally consented to allow them to change their pretty starched dresses for the tomboyish jeans.

But now as I wave goodbye each morning and watch the school bus pick up the girls, I find there is something appealing and satisfying about that combination of plaid flannel shirt, blue dungarees, well scrubbed faces, and shining hair tied with ribbons.

Whatever the activity is, whether in the schoolroom, on the playground, or after-school chores, the girls are appropriately attired. Dungarees are sturdy, and can take a lot of wear and tear. They are easy to launder, need no starching, and very little ironing. One pair, or two at most, can go a whole week. The flannel shirts usually worn with them are even easier to wash, need no starching and little ironing.

In the spring when the weather isn't cold enough for ski pants, but is too cold for bare legs, dungarees are the right answer. In the winter my girls often combine sweaters or long-sleeved

"You could spend an evening at home with me in a while!"

The Public Health Nurses work with the doctors in their territory and with the special clinics such as Dental, Orthopedic and Child Guidance. Often the nurse explains instructions given a patient by a doctor or at one of these clinics. She also demonstrates exercises or treatments. The nurse can often give you helpful advice if you have a child needing special guidance.

Sometimes the Public Health Nurse finds a case where a minor operation or glasses or dental work is needed and cannot be paid for by the patient. She asks for help for these cases from local American Legion or Auxiliary organizations, Lions Club, Salvation Army or other organizations.

Anything You Want to Know

In addition to these many and various duties the Public Health Nurse is often asked to attend Pre-school Mothers Clubs in her territory. (Miss Peters has three Pre-school Mothers Clubs who return the favor by helping her at the clinics.) She is in charge of Mobile X-ray units when they visit her territory, picking places for them to go and advertising them. She is a veritable information bureau. She can tell you about the various clinics that are held and much other worthwhile information. She can even tell you where to go to find out about adopting a baby!

polo shirts with the jeans, and in the summer short-sleeved jerseys or blouses for a change.

Our village schoolteachers have become used to seeing their girl pupils in dungarees and think the idea is a very good one. The youngsters are more comfortable. And on winter mornings when the schoolroom often is chilly, the extra covering is well appreciated. Country children, like their city cousins, no longer wear the long underwear, stockings and such that their parents wore. Although I heartily recommend the dungarees for the elementary school group, however, I still think they are unbecoming to high school girls during classes. For out-of-school activities they are quite suitable.

Now that I'm sold on the idea of jeans, I hope the style doesn't change. Besides being practical, they're most economical. Three pairs each will see my youngsters through a school year. They cost around \$2.00 per pair, will stand up under numerous washings, and, if they fade a little, they're still stylish because faded blue is a popular color.

My daughters only wear dresses now on special occasions, such as to church, to town, and to social functions. As for myself, I'm very pleased to be relieved of the hours of drudgery of starching and ironing quantities of dresses every week.

I think the idea of "dungies" for girls is the best thing that's come along. All mothers should consider it, but especially country mothers of large families. They can be interchangeable, because some girls prefer the boy's style. In my case, there's no waste at all, my pre-school boys finish the job of "wearing out" any that are too shabby for school wear, or pairs just outgrown.—Mrs. Marie Martin, Baltic, Connecticut.

WHAT'S GONE BEFORE

You can easily start this absorbing story by Mr. Eastman with the second chapter on this page. But the best way is to look up and read the first chapter which appeared in the last issue of *American Agriculturist* (September 2).

The story begins at the opening of the Civil War in April, 1861, in a typical farm neighborhood in southern New York. Mark Wilson, a young farmer living with his parents, George and Nancy Wilson, and his younger brothers and sisters, is in mental conflict about answering Abe Lincoln's call for volunteers and leaving his sweetheart, Ann Clinton, a neighboring farm girl. At a party to which Mark takes Ann, Henry Bain, well-to-do and unscrupulous, tries with some success to get Ann away from Mark. A bitter fight ensues, with Mark the winner, after which he forces Ann to go home with him, tells her what is what, and then with bloody and battered face, kisses her goodnight with considerable emphasis.

CHAPTER II

"Boys, get up! Get up, I say!"

Mark heard his father calling as from a dim and distant land and for a moment thought he was dreaming. Then he started to turn over and groaned. Every muscle in his body was sore from work in the woods the day before and the pain brought him suddenly wide awake, but before he could answer, his father called again:

"Boys, are you awake? Mark! Get up, I say. The sap has run all night, and we've got to get right at it."

Mark climbed slowly out of bed and yelled at his brothers:

"Tom! Charlie! Wake up! It's chore time. Get a move on!"

Not a sound came from the other bed, but Mark, watching closely, saw Charlie slowly open one eye and then quickly close it again, as if a new day was just too much for him to contemplate. Mark yelled again:

"No foolin', Charlie. If you don't get out of there, I'll pull you out!"

Slowly Charlie stuck one not-too-clean foot out of bed, but when it touched the cold floor he hastily pulled it back under the covers again. Although Tom hadn't moved at all, Mark knew that he, too, was playing possum.

"All right," he said, "it's your funeral, not mine. Sap ran all night. Pa's in a hurry. You'll catch you-know-what if you don't get goin'."

That got them out of bed.

Outdoors spring was in the air. A robin chirped in the lilac bush by the corner of the stoop. In the lane that led to the pasture, grass was showing a little green at the edge of the snow-drift that was mostly gone, and the morning sun just coming up promised a warm day. But Mark was too lame and sore to notice, and anyway there was too much to do. "There always is," he thought, bitterly, as he went on to the barn.

Driven by their father's impatience, the chores were soon completed and they went indoors again to a breakfast of hot buckwheat pancakes, new maple sirup, fried salt pork, and fried potatoes. Watching a little wearily as the big stack of pancakes disappeared so rapidly into her hungry tribe, Nancy Wilson thought:

"It takes more than a war—or the rumor of war—to curb farm appetites."

Breakfast over, the boys hurried out to hitch the team to the longsleigh, on which was a big wooden tub. Then they drove into the maple grove and started to gather sap. The frost was nearly out of the ground and it was the last run of the season, but a good one. Every one of the two or three wooden buckets on each tree was full or running over with the sap, and the long wooden spiles were dripping fast. The boys carried the buckets to the tub on the sleigh, and when it was full they drove to the sap house to empty it and then returned to fill it again. In a couple of hours every receptacle in the old sugar house was filled to the brim, and there still was plenty of sap ungathered. On their first trip to the sugar house they found their father had finished his after-breakfast pipe and built a fire under the long sap pan, and already the sap was beginning to boil.

All day they worked to keep ahead of the big run, but when evening came the storage tanks were still full and it was evident that the fires would have to be run all night. For this job they had plenty of help, or at least company, the fore part of the night, for after supper some of the neighbors came to sit on logs or the makeshift seats in front of the arch where the blazing fire took the chill off the early spring night. The flickering light and the steam from the boiling sap, which often whirled in wisps around the men, made everything seem unreal. But the men lounging around the fire Mark had known all his life.

"Sap ain't as sweet this year," stated old Harry Cortright, stroking his grizzled beard which was sprinkled with tobacco juice. Rough of language and not too clean, opinionated and argumentative, Harry was nearly everything that he shouldn't be, but withal he had native commonsense, was a hard worker, and a good farmer.

"Depends on your grove and your trees," contradicted George Wilson. "This year my sap is sweeter'n ever."

"Trouble with Harry is that he chews so much terbaccer and is gettin' so old he can't tell whether anything's sweet or sour any more," said Enoch Payne, a red-headed bachelor of around forty who farmed a small place and worked for his neighbors on the side. His remark made the other men laugh, but Cortright, ignoring it for the moment, continued:

"This last run of sap won't be no good anyhow. Buds are started. 'S too late. Sirup'll be too strong to eat. Waste of time. Might better have pulled your spiles a week ago."

Enoch laughed:

"Bet you'd eat the sirup, Harry, even if it was buddy. I never saw such a hog for sirup as he is," he said to the others. "When I was workin' there the other day, Harry piled his plate with plenty of everything on the table and then poured sirup over the whole darn mess, potatoes and all."

"Course I did," agreed Cortright. "Sirup doesn't only taste good, but it's good for ye. Best spring medicine there is. Cleans yer right out." Turning to Enoch, he said:

"Maybe somethin' like that's what ye need. Forty years old if ye be a day, an' not a single kid to show for a misspent life—at least not as anyone knows about."

Before Enoch could think up a suitable answer to that one, John Barrett said:

"Maybe Harry's right about sirup being good medicine. Some kind of medicine and a change of grub is sure needed this time of year. The vegetables in the cellar are pretty well played out an' I'm darn sick of eatin' nothin' but potatoes, milk gravy, an' salt pork."

"Yeah!" agreed Harry. "Sort of between hay an' grass early spring is,

ain't it. Every year 'bout this time I figure that if I can just last through till dandelion greens, I'll be all right."

"That reminds me—" began Enoch Payne.

"Never mind what it reminds ye of," interrupted Harry, grinning. "We've heard all of those 'reminds me's' of yours a dozen times. Why don't ye get a new story once in a while?"

"As I was sayin' when I was so rudely interrupted—it reminds me—" continued Enoch, blandly.

"What reminded ye? Nobody asked ye to tell any of them old chestnuts."

Enoch grinned with the others, but went on just the same:

"I wasn't goin' to tell a chestnut, Harry. I was goin' to ask you if you remember the time you took the load of potatoes to Owego an' comin' back early in the evening made up your mind that you didn't have whisky enough to carry you over the weekend. So you started to turn your team around and the lumber wagon with its big double box, right in the middle of the Narrows just this side of Owego. You yanked them around too short and tipped the wagon over, with you under the box. An' there you had to stay the rest of the night until somebody came along early in the mornin' and heard you hollerin'. They tipped the box back up, and there you were!"

"Dumb lie!" snorted Harry. "I tipped that box over by myself, put it back on the wagon, turned the team around, went back to 'wego, got my whiskey, and got home in time for milkin' the next mornin'."

Everybody laughed except John Barrett. He was still thinking about the scanty food supplies at the end of the winter.

"Talking about catching colds," he said now. "We don't catch colds—they catch us. I'll bet the reason so many of us are sick this time of year is because we run out of good eats."

"You could be right," spoke up DeWitt Legg, the chubby local butcher. "I'll tell ye, boy, how to fix up your vittles so you never will be sick. Me now, I've never been sick in my life. Know what I do?" Without waiting for an answer he continued:

"I never kill a beef without drinkin' all of the warm blood I can hold an' savin' some to drink afterwards."

No one spoke, and everyone felt disgusted. Back in the shadows, Mark shuddered.

"All right, you can stick up your fine noses," continued the butcher, "but some of the strongest, bravest fellows that ever lived were the Mountain Men who explored the Rockies. They never had a vegetable or a green thing to eat for years. Never had a drink of milk, never had nothin' but meat an' beans an' some poor stuff they made out of coarse flour and meal. An' they were never sick. They could shoot straighter, run faster an' farther an' love harder than anybody. They had to keep alive! They kept that way by drinkin' the blood of the buffalo or the antelope every time they killed one."

Peeved by their continued silence, he said:

"What the H---s the difference, anyway? All of you eat meat. Blood's just as clean as meat."

"Could be," said old Harry. "I eat woodchucks sometimes, an' folks stick up their noses at that."

Rising from his seat, Mark went over to the boiling sirup and began fishing around in the back end of the pan with a long-handled skimmer. After watching him for a moment, his father asked:

"What are you doing there?"

Instead of answering, Mark pulled out an egg.

"What in time are you trying to do?" his father insisted.

Mark stopped his fishing for a moment to answer:

"Mother gave me a dozen eggs to boil in the sap tonight so we could have

(Continued on Opposite Page)

SLIM AND SPUD

The Pay Off

(Continued from Opposite Page)

them to eat—if I can find them," he murmured as he continued his fishing around.

"Nice way to waste money," his father snapped, but Enoch said, mildly: "Let the boy be, George. I'll bet you did the same thing years ago — only nobody gave you the eggs—you probably stole 'em!"

George Wilson grinned and said nothing more, while Mark continued to fish eggs out of the hot sap until he had found the whole dozen. Then he passed them around, with a salt cellar, and they were eaten with great gusto.

Enoch smacked his lips. "Sure makes 'em good to cook 'em in the boilin' sap," he said.

As the evening wore on the men talked on many subjects, but at first seemed to avoid the one topic that was uppermost in all their minds. Finally Barrett brought it up:

"I guess Lincoln is goin' to get his seventy-five thousand three-months' men all right. I hear the boys are rushin' like fools into the towns everywhere to enlist."

"Seventy-five thousand, my eye!" said George Wilson. "Over ninety thousand have enlisted already. All the Northern cities are decorated, fife and drum corps are parading the streets, and thousands more are rushing to enlist. Even the Northern Democrats headed by such old war horses as Steve Douglas—who used to debate with Abe Lincoln, have thrown their hats in and are just as patriotic as the Republicans. At least some of them are. Old Steve says the time for debate is past. Every man must be for the United States or against it. It's not a question of being for or against slavery. The South is seceding and it's now a question of saving the Union."

George stopped talking for a moment and then went on:

"We can argue and debate all we want in peace time, but when they fire on the flag that's something else again! Anderson had to pull down the flag at Fort Sumter, and just a few days ago a regiment of our boys were fired on as they marched through Baltimore on their way to Washington. The North won't stand for that sort of thing—and we shouldn't."

"Well, maybe we'll have to stand for it," said Cortright. "Henry Bain was sayin' just today that the dang fools rushin' to enlist will soon get a belly-full. Said 'twon't take three months, either. Henry was tellin' us how the Southerners are pourin' out by the thousands to defend their home country. Most of 'em grew up with a rifle. They're dead shots. They know all about war an' fightin'. Our fellers don't know nothing 'bout it. Henry Bain's a smart feller. Maybe he's right. Maybe it won't take three months. Prob'ly our boys—or what's left of 'em—will come draggin' back in three or four weeks with their tails between their legs."

"Not so fast, Harry," said Enoch Payne. "Not so fast. Maybe the Southern boys do know more about guns, but our fellows can learn. They've got what it takes. Did you ever see a

SUNDAY EVENING

By Mildred Goff

There's a little white church on a hill,
There's a star above the steeple,
And the deep-toned church bells call
"Come to church, good people."

The stained glass windows shine
Like the stained glass western sky,
And the mellow church bells chime
Soft as a lullaby.

Yankee in a fight? He just doesn't know enough to know when he's licked! When you think it's all over with him, he's just startin' to fight. Our boys won't be back in three weeks, nor for that matter in three months. This isn't goin' to be any picnic. Our fellows have got to learn and learn fast—and they'll do it."

"It'll be a struggle," agreed George Wilson, "maybe a long one. But the North'll win. We've got more men and more resources. Abe Lincoln says that no nation can exist half slave and half free. That's right—and we're going to continue to exist! Some of us may not be here to see it, but you just put that in your pipe and smoke it."

Back in the shadows by the side of the big furnace Mark had been listening and saying nothing, but Cortright's report of what Bain had said, together with his father's statement of confidence in the North, brought to a sudden head a decision that had been simmering in his mind for days. He would go to war. Judging from his father's remarks, Mark felt he wouldn't oppose his going. Abruptly he jumped to his feet, and in the silence which followed his sudden movement, said:

"This is a good chance to tell you fellows something. I haven't had any chance to talk with Pa, but I think it'll be all right with him. Anyway, I'm going to enlist."

His self-assurance suddenly evaporating, he sat down again.

Listening to his son's young voice, George suddenly thought back across the years—not so long ago, either—to the time when this stripling had been a small boy with his make-believe games around the house and farm. And now here he was a man, making a man's decisions. George's voice was a little husky:

"All right, Mark. It's your decision, and I think it's a right one. But I think you might have talked it over at home first, don't you?"

"Guess I should," the boy agreed. "But I got a little excited."

Harry Cortright broke the silence: "Thought you were goin' to marry that Clinton girl? What's she goin' to say to your runnin' off to war? Better look out. I heerd Henry Bain was sweet on her, too."

Mark made no answer, but Cortright had put his own doubts into words. It wouldn't change his determination to enlist, but he made up his mind that he would bring matters to a head with Ann before he left by insisting that she marry him immediately.

As the hour grew late, the men

gradually drifted away until only Mark and his brother Charlie were left to keep the furnace going and the sap boiling. A little later Charlie went to bed and Mark was left alone to tend the fire. The pile of 4-foot wood by the furnace door was growing low, so Mark spent some time bringing in another supply from outside. Then he opened the big iron doors of the furnace, raked down the coals, and put in a fresh supply of wood. Hot and sweaty from his work, he went to stand in the saphouse door to cool off. The night was warm, a gentle breeze cooled his face, and overhead the sky was studded with stars. Fooled by the false dawn, a rooster crowed in the henhouse over near the barn, and from somewhere in the neighborhood came the lonesome sound of a barking dog.

Shivering a little, and with a sense of loneliness and unreality, Mark turned back into the warm saphouse and sprawled in the old makeshift chair in front of the furnace.

What would it be like to be married, he wondered. His father and mother seemed to get along all right, but he couldn't remember ever seeing his father put an arm around his mother and kiss her. Had they always been like that? Or did they keep their display of affection for themselves alone? Was it only young folks who were demonstrative? If work was all there was to marriage, it seemed commonplace, unromantic, and disappointing.

But at that his family life was so much better than that of Mert Cortright, old Harry's son. Mert was always getting drunk and beating up his wife. They had a big family of children, and Mrs. Cortright worked out around the neighborhood to get enough to feed the family. Even when Mert wasn't drunk, he wouldn't work. Funny business, marriage! If that was all people could put into it, why did they bother? Might better stay free and independent.

He didn't think it would be that way with him and Ann. When he was with her he was happier than he had ever been before in his life—that is, when she wasn't moody. If he could just keep that feeling of happiness all of his life, marriage would be just great. Then worry asserted itself again. There were times when Ann would sort of go away from him when they were together. She'd be in a tantalizing, irritating mood, finding fault with everything he did, or else she'd be unapproachable. She wasn't always the same, and he just didn't know how to take it.

Anyway, he had to take it, for there was no doubt at all about his love for her. He'd never felt that way about anybody else in his life. Maybe he couldn't be happy with her, but he was darn sure he couldn't be happy without her.

That brought back to his mind the decision he had just made to enlist. How could he go away from Ann—maybe for a long time? His thoughts changed again and he dreamed a little about the glory of war, the waving flags, the martial music; the shouting, noisy crowds heaping flowers in the path of soldiers on their way to war. Perhaps he would come back covered with glory, a captain maybe, or even a colonel, with the praises of his superior officers ringing in his ears; come back with the fifes and drums playing just for him, back to the eager arms of his wife, Ann.

Yes, wife. How he loved to roll that word on his tongue.

He roused himself from his dreams to stoke the fire again, dipped the sirup from the back of the pan into a can, refilled the pan with the last of the sap, and dropped tiredly into the old chair. It seemed that he had been there just about a minute when he heard his father's voice:

"Wake up, Mark! It's daylight. The fire'll be all right now. Come on down and help with the milking, get your breakfast, and then you can go to bed and sleep for a while."

(To be Continued)

Now available from the BEACON MILLING COMPANY of Cayuga, New York, is the fifth edition of a booklet called "Profitable Hog Management." It is written by J. M. Hunter and contains information that will interest any man who keeps hogs.

Treating seeds of corn, sugar beets, beans and other crops with Lindane insecticide has proved successful in controlling wireworms and other soil insects. A new folder just issued gives full details and directions for this relatively inexpensive method of controlling these insects. This folder is available for the asking by writing to CALIFORNIA SPRAY - CHEMICAL CORPORATION, Richmond, California. Please mention *American Agriculturist*.

The ROHM & HAAS COMPANY, Philadelphia chemicals manufacturers, has announced the purchase (for \$57,000) of a 211-acre farm in Bucks County, Penna., to use for the extension of the company's experimental field research on agricultural chemicals. The location 7 miles from their Bristol plant was chosen because soil there is suitable to fruit trees as well as vegetables. Rohm & Haas make Dithane, a fungicide, and Rhothane, an insecticide.

In the Disston Spring-Action Rake, HENRY DISSTON & SONS, Inc., of Philadelphia, have answered many raking problems. The teeth are made of special flat spring steel, hardened and oil tempered, but the unique feature is the backbone spring bolted to the handle. It takes strain off the teeth, permitting a lighter, stronger frame. On lawns or in litter, it makes raking much less tiring. Two sizes are available at your farm supplier.

A booklet, "Before You Build Your Barn," by the DOW CHEMICAL COMPANY of Midland, Mich., is about pentachlorophenol and gives many tips on the various ways of using "penta" to preserve buildings, posts, etc. A card to the above company at Midland will bring your copy.

"Your Key to Better Dairying" is the title of a free booklet offered by the NEW YORK ARTIFICIAL BREEDERS' COOPERATIVE, Ithaca, N. Y. Breeding programs, records, and sires are discussed. Featured is a day's trip with one of the inseminators.

Telephone number of the HERBERT M. PETZOLD EQUIPMENT CO. of Owego, N. Y., distributor for the Seaman Rotary Tiller, has been changed to Owego 1156.

You will enjoy the booklet "Farmers Together," the story of G.L.F. You can get a copy for yourself or several for you and your friends by writing to G.L.F. Member Relations, Ithaca, N. Y.

Here are vials and packages of the new Lederle vaccine for rabies. Tests showed that this will give a longer immunization and is a big improvement in the control of rabies.

KERNELS, SCREENINGS and CHAFF

SUNNYGABLES NOTES

By John Babcock

BOOTS made a remark the other day that stirred my thinking. We were driving past his herd of Holsteins on the big pasture flat. I mentioned how fast they had whittled the luxurious aftermath down to practically nothing.

"They'll sure eat a lot," Boots said. And after a pause, he added, "If you give them a chance. We'd better move them back on the hill now."

What Boots meant was that he could have forced his milking herd to get two or three more days' feed off the exhausted flat. It's too bad cows don't go on a sit-down strike and quit eating entirely when the feed is short or of poor quality. Instead, they give a mild protest in the form of less milk in the pail.

We are doing our best to stick to an old Sunnygables rule that good pasture is feed that a good cow will fill up on in an hour of grazing.

Concentrated Grazing

Through our improved pasture "islands" wherever there are a few acres that can be seeded, and by turning our first cutting silage acreage over to the cows for midsummer grazing, we've been able to give a cow the "chance" Boots referred to, of filling up fast on good feed. For my money, the less walking and grubbing around she has to do, the better she will produce. We use labor-saving practices around the barn to save steps for a man. We're trying to provide pasture that will save steps for the cow.

Bringing Rain to the Cow

Our latest provision for concentrated grazing has been to plan our rainfall through sprinkler irrigation. That way we have a pretty good idea of how long any given pasture acreage will last. After some experience, we will know just how much acreage we can definitely plan on to give our herd the concentrated grazing it will need all season long. To me, this is one of the most wonderful things we have ever been able to do at Sunnygables. It amounts to a guarantee that we will give our cows the "chance" to eat all they want, all summer long, on a set number of acres.

PASTURE IRRIGATION

I had a chance two years ago to see the development in irrigation that has taken place in the Pacific Northwest. Out there, if a fellow has a creek or pond on his farm, it is almost taken for granted that he irrigates.

Yet, when the equipment came for our wheel-move irrigation system here at Sunnygables, I wasn't too enthusiastic about setting it up. I recognized that it might do us some good if things got really dry, but even without irrigation our natural grass pastures were greened up pretty well, which is an in-

dication of better than usual soil moisture for this part of the country in midsummer.

The day we finally got the system operating, we were making some minor adjustments on the pump and got so busy that no one noticed a thundercloud had moved overhead. We all got soaked to the skin before we made the barn. For a moment there, I felt pretty silly standing dripping wet in the barn door, watching the sprinklers lazily throwing their spray over the pasture—right in the midst of a driving rain.

Checking later, though, it turned out that we had less than a quarter inch of nature's rain. The irrigation system at the same time had given us a measured inch of soaking "rain" on an acre, and was ready to be moved in a matter of moments to repeat the process on another acre. In a few days, we marched the wheel suspended pipe across the entire field. The growth on that field stepped right out ahead of the surrounding fields.

The only indications we have of a money return on the operation are tough to measure. There is a thrifty looking herd, good milk production which might have held up anyway, and a nice green field. Yet I'm sure it more than paid on the capital investment, a part-time man, and a few gallons of

gas. I'm sure in the same way top dressing pays off, or that we get our money back out of a seed bill. The production is there, but it is hard to evaluate in cold dollars and cents.

PASTURE PRACTICE

So far, in my thinking, I am considering sprinkler irrigation in the Northeast as a pasture practice. Most of us have considered irrigation something we would use on a garden, or some other place where we can see and harvest the increased yields.

It's going to be harder to see the return in investment where pasture or hay acreage is irrigated. It's easy to see the benefit during a bad drought. I'm thinking, though, of year in and year out use. Just glancing at the summer drop in milk production most of us go through is enough proof that our pastures just don't produce like they should. Also, with enough water, we can extend our fall grazing two or three weeks.

Perhaps the best way to show our attitude toward pasture irrigation here at Sunnygables is to look back a month ago when we really needed water. On one end of the irrigated pasture we have our farm garden. That way, we can move our pipes and water just when we need to. Yet, when the corn leaves were curling and the tomato plants looked pretty sad from lack of water, the boys didn't irrigate the garden until the pasture had been covered. Why? They thought the pasture needed—and rated—the watering more than their own fruits and vegetables!

PICNICS AND PAPERS

Down the road from the house we have a row of old maple trees some twenty or thirty feet from the road. The shady spot has long been a favorite parking area for tired truck drivers. Almost any time during the summer,

JOHN FOUND A SOLUTION

YOU will laugh at John Babcock's and Jack Conner's solution to the dirty picnickers problem which John describes on this page. I'll bet their remedy works, and maybe you can use it.

Certainly John has put his finger on one of the most annoying problems of country life. A state road runs three-quarters of a mile through my farm. I seldom go along this stretch, or even cross the road to the barn, without seeing a litter of old papers, beer bottles, paper cups, pasteboard boxes, etc. It is hard to understand how so many people can have such dirty habits. It reminds me of a sign I saw in the office of a friend one time which said: "If you spit on the floor at home, you can do it here!"

—E. R. Eastman.

you can drive by and see a pair of work shoes stuck out of the cab window while some tired driver catches a few minutes' peaceful rest.

On the other hand, though, a great many picnickers stop at the same shady spot. The general run of them are surprisingly inconsiderate and sloppy. Carelessly laid fires have scorched leaves from the trees; there are stones and papers strewn around constantly, and often we are donated a parcel of garbage as folks depart.

Jack and I discussed how we could prevent this, and still keep a place for a truck driver to turn in for a quick snooze. Jack came up with a solution which will leave the area attractive and useful to a tired driver, but which will discourage sloppy picnic gangs. The next time he cleans the calf pens, he's just going to swing by our shady spot with the spreader.

Sunnygables' Brown Swiss Enjoy Their Showers

Ross Yapple moves 600 feet of this wheel-mounted irrigation system in a matter of minutes. The pipe, which empties automatically when the water is turned off, is made of light aluminum and acts as an axle when the system is moved. The spray

nozzles revolve slowly and apparently apply the water evenly. The whole system is amazingly simple and fool proof. And our curious Brown Swiss don't seem to mind a cooling shower once in a while.

SERVICE BUREAU

By H. L. Cosline

MORE ABOUT "TIE-MAKING"

EARLY in the year we ran a letter from a subscriber telling about her unhappy experience with making ties at home. At that time we asked for letters from readers who had actually made money doing this kind of work. We received a number of replies from women who had also had unsatisfactory results, but no one reported finding such an enterprise profitable.

One subscriber sent us a list of people supposedly under contract with the tie outfit. On contacting a couple of ladies in this section of the country, we were advised that neither of them had ever completed ties to meet the requirements of the tie company. They had merely sent in sample ties and been advised that they were unsatisfactory.

It has always seemed to us that many of these homework schemes are promoted for the sole purpose of getting the initial deposit or down payment on materials, rather than to locate workers who might be able to make "pin money" in their spare time at home. We feel that our subscribers can do better by developing some latent talent, such as sewing, cooking, etc., and then working up a local market through selling to friends and by advertising in local papers.

FURNACE REPAIR RACKET

THE National Better Business Bureau has warned home owners to beware of outfits traveling around the country and offering to inspect furnaces. Although in a minority in the furnace and furnace repair business, such outfits are around about this time of year.

Usually a so-called "inspector" offers to make a routine check of a home owner's furnace on the pretense that he is representing a government

agency, civil department or some citizens' protective league. This inspection is generally followed by the advice that, although the furnace appears to be in good condition, it should be cleaned or re-cemented. If the owner agrees, the "inspector" will (quite "by chance") have a few good contacts in the vicinity. Repairmen soon arrive and completely dismantle the furnace.

At this point, an "engineer" arrives. After a "thorough inspection" of the furnace, this fellow decides it would constitute a fire or health hazard if reassembled. According to his specifications, repair would be costly; and the owner is told that he should buy a new furnace. Some owners are impressed by the apparent authority of these men and agree. If the owner balks, he is informed that the "engineer" and the company he represents will not be responsible for any fire, carbon-monoxide poisoning, loss of life, etc., if the old furnace is reassembled. If the owner still refuses to consider buying a new furnace, the men have been known to walk out leaving furnace parts strewn about the basement floor.

Consultations with qualified heating men have revealed in many cases that the "condemned" furnaces were in reasonably good condition and needed only certain routine, inexpensive repairs. It is best to deal only with furnace repair firms known by home owners to be reliable. The majority of such firms are reputable, but there are a few in the industry who use the questionable tactics outlined in previous paragraphs. For efficient and safe operation, a furnace should be kept clean and in good repair.

— A. A. —

"Recently I was debating whether or not I should take advantage of a proposition which had been offered to me. In the very next issue, your Service Bureau issued a warning against getting involved in such a plan. Thanks for this wonderful service."—R. D., Maryland.

Tracks Down Thieves—Earns \$25 Reward

RUSSELL WHITNEY of Salisbury, Vermont, found one of his heifers gone when he went to the barn one morning about two months ago. On investigating, he found tracks of two people leading across the fields. He followed these tracks along a power line to a neighboring place. Back of the barn he found indications that something had been buried recently. Mr. Whitney dug into the ground and uncovered parts of an animal.

The Sheriff was called, and he came armed with a search warrant and accompanied by State Troopers. Mr. Whitney took them to the spot, and they dug up the head and insides of a cow. The hide was discovered in a tree. They also found where the animal had been dressed.

The subscriber and police officers then went to the nearby house, where they found the meat being canned. The

hind quarters were discovered in a well. Phillip Newton, Jr., of East Middlebury, and Miss June Narabone, who lived on the place where the remains of the animal were found, confessed to stealing and slaughtering the heifer. Newton was sentenced to one to three years in the House of Correction in Windsor by Municipal Judge Samuel Fishman after pleading guilty to a charge of breaking and entering. Miss Narabone was given a suspended sentence on the same charge.

Our congratulations go to Mr. Whitney for his prompt and effective action in putting police officials on the trail of these thieves. Congratulations are also due the Sheriff and State Troopers for their part in the incident, as well as Judge Fishman for seeing that justice was done. Below is a reproduction of the reward check American Agriculturist sent Mr. Whitney.

SELL HER MILK!

Her calf doesn't need it
...with **KAFF-A**
The safe replacement for milk!

Raise healthy calves on vitamin-high Kaff-A! A million healthy heifers have already been raised on Kaff-A. It's the *safe* replacement for milk... the one you can be sure will produce healthy calves! So don't take a chance on an inferior imitation of Kaff-A. A nickel saved on feed may cost you many dollars if your cows turn out to be poor milkers because of lack of proper nutrition during their starting period. Be safe! Feed Kaff-A! Its vitamin content is known! Kaff-A has a nutritious dried butter-milk base. It also contains other dairy by-products, some cereal products, plus plenty of Vitamin A and D Feeding Oil!

Every box gives you up to 500 extra pounds of milk to sell! Just 1 lb. of Kaff-A replaces 10 lbs. of milk in calf feeding! That means every 50 lb. box of Kaff-A fed with low-cost hay and grain can release as much as 500 lbs. of milk you can sell! And you'll find that adds up to a handsome profit!

Easy to feed! Just mix one part Kaff-A to 9 parts of warm water, and begin to feed on the 4th day! By the 10th day your calves will be completely weaned! So feed Kaff-A and sell your cow's milk! Kaff-A is the safe replacement for milk!

THE FARM PAPER OF THE NORTHEAST

Eggs in a well-designed poultry farm cellar.

Looking over eggs as they arrive in New York City.

MY SELLING experience, as far as farm products are concerned, is confined to eggs, and that's what I want to talk about.

Politicians always tell us around election time that farming is the biggest and most important industry in this country. I believe it—but it's not the most prosperous at the producer end. I don't know why, but I think it has something to do with the selling of the product.

In the case of shoes, airplane rides, cigars, cigarettes, automobiles, soft drinks, clothing and just about everything non-agricultural, the producer controls and often finances the selling clear through to the ultimate consumer. But with farm products—for example, eggs—the producer usually washes his hands of the selling job after the produce leaves his farm.

A Better Mousetrap

"Build a better mousetrap and the world will beat a path to your door." I don't remember who said that and I don't entirely agree. It was probably more true when it was written than it is in these days of newspaper and radio advertising and special selling techniques. I think a second grade mousetrap would outsell it if it had a strong sales program behind it, while the best mousetrap producer waited for the world to come and get it. I do, however, agree with the mousetrap idea in part. I believe that a real fine article helps sell itself.

Good Eggs—But

Here in the Northeast we can and do produce good eggs. We're close to our customers and can deliver the eggs without too much

Let's Sell More Northeastern EGGS

By J. C. Huttar

loss of quality. But we don't always do it. This is particularly true if we consider egg quality as being both inside and outside the egg shell.

New York State's eggs are about average for the Northeast. I have just looked over the inspection reports for 25 cases of eggs produced on 25 different New York State farms. I made about a third of these inspections myself. These 25 cases were all large grade white eggs. Now, let's look at the report for an average case in the lot. There are 30 dozen, or 360 eggs, in a case and here's the way they divided up.

No, wait! Before I give you these figures let me tell you about another case of eggs I examined. I picked it at random out of a lot of 50 which came from a man in Minnesota who buys up eggs from farmers out there. He candles and grades them for size and ships

the best grade into the New York market.

Now, here are the figures for the average New York case and the Minnesota case, which the wholesaler told me was fairly typical of the eggs this particular shipper has been sending to him for a long time.

Retail Grade	New York	Minnesota
AA	134	20
A	150	306
B	23	34
C	4	0
Cracks	26	0
Bloods	10	1
Dirtyes	8	0
Mediums	4	0

Now, put yourself in the place of the buyer in New York City, where both of these cases and many others like them are available. If you bought the New York State case today (Sept. 12), it would cost you 67c a dozen or \$20.10. But the top-quoted price on Midwestern whites is only 57c, so you could buy the Minnesota case for \$17.10.

Let's say that because of the large number of AA eggs in the New York State case you decide to buy it, but your competitor across the street buys the Minnesota case. You're both after the same housewife's business.

Large white grade A eggs are selling for 71 to 85c a dozen in New York retail stores today. Because you've got many more AA eggs in the New Yorker's case you charge 84c a dozen for the 284 Grade A and AA eggs you get from this case. The grade B's you've got to cut to 60c and the C's to 48c because there are lots of storage eggs to compete with them right now. You also sell the cracks for 48c a dozen which is a pretty good price, and the

(Continued on Page 16)

Plan Your Winter Feeding Program with this Objective

More Milk and a Better Cow Left...

TO PRODUCE more milk this winter and have cows come through in good shape, dairymen have to make a feeding plan that fits their cows, the kind of hay and silage they have, and takes account of any home-grown grain. These conditions differ from farm to farm—neighbor to neighbor and should be met as they exist.

High producing cows need large amounts of concentrates in order to get sufficient nutrients to keep up the heavy flow of milk. Yet the nutritional needs of a herd will vary according to the roughage fed. Good leafy alfalfa contains more than five times as much digestible protein as late cut timothy and almost one third more total digestible nutrients.

Not Just Feed—but a Flexible Feed Service

To answer the diversified needs of dairymen in G.L.F. territory for more than just a cow feed, G.L.F. has established a complete feeding service—one that includes a way of meeting any combination of feeding requirements.

Flexible Formulas—This group of high quality feeds offer the best dollar for dollar value for most dairymen. The formulas change from time to time as market prices on different ingredients change.

16% Dairy
18% Dairy

20% Exchange Dairy
24% Milk Maker

Fixed Formulas—Dairymen who have high producing cows or cows on test often prefer these feeds, even though they cost a little more. They are higher in fat and the formulas remain intact month after month.

20% Super Exchange

16% Super Test

Grinding and Mixing

Where home-grown grains play a big part in feeding cows, G.L.F. has set up community facilities for grinding, mixing and molasses blending. In these areas store managers and agent buyers are well trained in formulating feeds either from selected ingredients or G.L.F. 30% Supplement and home-grown grains.

Cooperative G.L.F. Exchange, Inc., Ithaca, New York.

G.L.F. Dairy Feed Service

Ex- G. I. Counts on Hard Work To Build Family Security

ROBERT T. (Bob) WHITE is an ex- G.I. who decided two years ago that if he worked as hard for himself as he did on his job as a road construction foreman, he would have much more independence, a future he could build for himself, and an income that wouldn't stop every time a rainy day halted road work.

He had never farmed it in his life, but he and Mrs. White both wanted to bring their boys up in the country. With the confidence of youth in their own ability to succeed, they bought 125 acres near Red Creek in Wayne County, New York, in March, 1949. Already their ambition is paying off. There are 19 head of milch cows in the barn. Single-handed during the fall and winter, Bob cleared out an old, worn-out peach orchard, and in its place this summer are 18 acres of as good silage corn as any in the area. He'll also harvested as grain 24 acres of oats and 5 of wheat to mix with commercial dairy ration for his herd.

With Mrs. White driving the tractor, Bob loaded every ton of the hay that neighbor Henry Craine came over and custom-baled for him—and then mowed it all away. He doesn't have a hired man and doesn't plan on having one for several years. "I'm young and strong and want to build up this farm so that I can add 50 acres every time we have a son," he told me, and then added with a grin, "My folks had 9 boys and 3 girls." The Whites have three sons,

It's not a safe practice to let young men like Mike even play on tractors—and it will be a few years yet before the 5-year-old will be able to toss hay bales around, but you can see how proud his dad, Bob White of Red Creek, N. Y., is of his second son.

Tommy, 8, Mike, 5, and Danny, 1. Bob says Danny is the only one not working on the farm.—A.J.H.

About the only hired help Bob White ever has with his 125-acre dairy farm is when his neighbor, Henry Craine, shown above, comes over to bale his crop. This old meadow produced a light first cutting this year but it was good quality.

F.F.A. at Newton, N. J., Has Own Building

IT TAKES more than a modern building to turn out leading Future Farmers of America, but a combination of good facilities, willing boys and competent instructors is hard to beat. The Newton, New Jersey, Chapter F.F.A. led all the state in number of awards and honors won at the recent state convention, and it was in the building below that the boys gained much of their knowledge and understanding of farm problems.

In the 3-year-old building, the center section is a well lighted shop equipped with a forge, welding and other equipment. The 2-story wing at the right has classrooms upstairs and plenty of space downstairs for repairs to tractors and other heavy machinery. The wing at the left was completed last year and will be occupied by the Ryerson Avenue grammar school until the new Newton High School is completed. It will then house the homemaking classes.

POUR FOUNDATIONS BEFORE FROST!

Get better farm buildings with **RILCO RAFTERS**

● Plan now to pour the foundation for your Rilco barn or machine shed and complete its erection after corn picking. By building during the fall and winter months, you'll find it easier to get help and materials. Then, too, you won't be as busy at this time.

Think of these advantages when you plan, and before getting too far along, have a talk with your Rilco lumber dealer. He'll be glad to show you how Rilco post-free construction provides a roomier, more usable interior. He'll also point out the tremendous strength of glued-laminated wood framing, the engineered soundness of Rilco construction, the speed and ease with which Rilco buildings are completed.

Rilco rafters are available for farm buildings of all types and sizes. Better see your Rilco dealer soon or drop us a line requesting the Rilco pocket farm catalog . . . it's free!

WHY not? An electric ventilating system helps you to make savings in your poultry business.

Saves you a lot of work — because a properly installed ventilating system helps keep litter dry.

Saves the building — because it helps stop moisture and frost from collecting on the walls.

Saves you time — because it helps to prevent sudden temperature changes in the house, eliminates drafts, and needs little attention.

Ask your Niagara Mohawk Power Farm Service Representative or your County Agricultural Agent for plans for a simple electric poultry house ventilating system.

A PLAN FOR BETTER POTATO MARKETING

ONE OF THE most hopeful things that has happened in agriculture in a long time is the defeat of the potato marketing agreements by large majorities of growers in New York, Long Island and Pennsylvania.

But now that growers have deprived themselves of the accompanying price supports and decided to stand on their own feet without so much government regulation, what can be done to improve the marketing of their product? My friend, Bill Stempfle, county agricultural agent in Steuben County, New York, where great quantities of potatoes are produced, comes up with a sensible, practical suggestion.

"If," says Bill, "the trend is to be turned away from socialism, the free enterprise system must be made to function. That means that potato growers must not go broke because they lack price supports. I propose that there be held in Steuben County a meeting of buyers, local shippers, and growers, the purpose of which would be to encourage careful harvesting, strict grading, and aggressive selling of the crop.

"Potato growers in some areas are the first in the nation to deny themselves the advantage of government programs intended to give the security and protection sought by all other groups. All of agriculture will watch closely to observe the result, and this situation may determine the future trend in government programs. It deserves and demands the serious attention of those who favor the free enterprise system."

As a result of Bill's most excellent suggestion, a meeting and a tour of growers and buyers was held in Steuben County September 28. It gave the producers and the buyers an opportunity to study the potato situation in that county at first hand and to exchange information and points of view, which should do much to improve the producers' potato markets. What is needed now is a similar get-together in every intensive potato-growing district in the Northeast, particularly where the producers have voted out the marketing agreement.

DEWEY J. CARTER

I REGRET the necessity of recording the death on September 13 of my lifelong friend, Dewey J. Carter, for twenty-five years editor of the *Dairyman's League News*. On his retirement from this position in 1947 he was succeeded by George C. Lee, the present competent editor of the *News*.

Thousands of farmers in the New York milk shed knew Dewey Carter personally, and many more through his writings in the *News*. His two greatest loyalties and enthusiasms were his family and better markets and prices for milk farmers through cooperation. He was one of the pioneers in dairy marketing cooperation and wrote volumes on the subject, influencing thousands toward better teamwork with their neighbors in the marketing of their products.

Personally Dewey—or "Nick" as he was known to his personal friends—was a lovable and kindly gentleman. He will be missed.

YOU WOULD GO UNDERGROUND

IF YOU WANT a story of great sacrifice made by a large group of people for a principle, take out your old school history and reread the story of the Pilgrims. They had homes, relatives, friends, and a sure means of livelihood in England. Picture yourself in their place and try to get some idea of what it meant to leave security and flee to Holland, a foreign country where everything was new and strange and where there was no security, in order that they might have more personal freedom.

When difficulties arose in Holland, too, the Pilgrims braved the unknown dangers of the Atlantic in 1620 to settle on the barren and inhospitable

By E. R. Eastman

shores of what is now Massachusetts. Their story and the story of the Puritans who came later to seek religious liberty is a tale of constant danger from the Indians, a struggle to make a living, and a fight to keep alive. Add to this the hard fighting and sacrifices of all the Americans in the thirteen original colonies, ending in the Declaration of Independence and the founding of these United States, and maybe you will get some faint idea of what the freedom we have enjoyed in past years in this democracy has cost us, the freedom that has given our children for generation after generation a thousand times more opportunity to show their stuff than has ever been had by any other people on the face of the globe.

But now we have lost much of that liberty, and we stand to lose more, perhaps all of it, because of our indifference and our demands for government "hand-outs", in return for which we sell our rights as individuals to the government.

What do I mean by your indifference and mine? Ask yourself these questions: How many times have I voted in the last five years? How much interest have I taken in the primaries, in the selection of candidates to represent my interests? Well, maybe you have done your duty. Some have. But cold statistics show that less than half of our

"They shall lose freedom who think it may be preserved without sweat and sacrifice."

From Eisenhower's address at the National Boy Scout Jamboree July 5, 1950.

American voters go to the polls, to say nothing of taking interest in the primary elections.

Yet should we lose our right to vote and all the liberties that go with it, practically all of us would have to go underground, as people have time and again down through the ages to try to save their religious and political liberties. Must we wait until forced to go underground, or shall we do what we can before it is too late?

Important elections are coming up this fall. There are many things a good citizen can do that many of us are not doing. The immediate thing is to study the election issues and protect your right to vote by using it.

A GREAT FAIR

UNTIL RECENTLY there have been many of us in New York State who were beginning to wonder if the State Fair was worth while. There was even a legislative study and much discussion about moving the Fair site to another location. Then a year ago Governor Dewey and Commissioner of Agriculture and Markets C. C. DuMond gave Earl Foster, Deputy Commissioner of Agriculture, the job of putting the New York State Fair back on the map at its present site. At the same time, Commissioner DuMond appointed a Women's Activities Committee, with Mrs. Martha Eddy as chairman.

The 1949 State Fair turned out to be the best in years. Governor Dewey then appointed Harold L. (Cap) Creal, outstanding farmer, farm leader and member of the Legislature, as State Fair Director, and "Cap", working with Earl Foster and the Women's Committee, succeeded in planning, organizing and coming through this year with one of the best State Fairs in America.

Speaking at the Farm Bureau Dinner given in honor of agriculture by the Syracuse Chamber of Commerce on the Friday evening of Fair Week, Governor Dewey said:

"It is an extraordinary Fair and if any of you

haven't been there you are missing something. In selecting a new director, I had to rob the Assembly of one of the finest citizens and one of the best farmers. But, gentlemen, Cap Creal has done a real job, greatly helped by Earl Foster.

"All of us hear frequently of the big Ottawa Fair and of the great Chicago Cattle Show. I have seen these Fairs and they aren't a patch on what we have here in Syracuse. For example, the grand champion steer at Chicago came in second at the Syracuse Fair, and the Ohio grand champion in the Jersey aged class came in third, I was at the Ottawa Fair, and it's a good fair; but the Ottawa Fair had about 500 head of cattle on exhibit and this year we had 1,100 head of cattle, which made it the greatest cattle exposition in the United States."

The Governor spoke of the fine contributions of the women and offered congratulations to everybody who helped to make the 1950 New York State Fair a great success. We of *American Agriculturist* second the motion, and also commend the Governor for his ability to pick the right men to do a good job.

WE CAN GROW CORN FOR GRAIN

JUST LAST night, September 21, I walked into a cornfield with the farmer friend who owned it. He hadn't been there himself since the last cultivation weeks ago. I am sure he was agreeably surprised to see a most excellent crop of mature husking corn. The corn will be picked and ground for grain, and the stalks, which are still green, will go into the silo.

This fine crop of matured corn for grain is possible through the use of a good hybrid variety, plus sufficient fertilizer on good soil. It can be duplicated on most northeastern farms. I predict that we are going back more and more to raising our own grain.

DON'T BUY THIS BOOK!

IF YOU DON'T want to sit up all night, I advise you not to buy Ed Eastman's new book *THE SETTLERS*, just off the press. I read this great story twice, and the second time I liked it even better than the first.

Don't buy this book, either, if you are looking for a story filled with filth and profanity, for this is one book that you will be proud to give to every member of your family, old or young. But you will have to be careful that it doesn't start an argument about who is to get it first.

No doubt you have read some of Ed's other books. But this thrilling story of the adventures of the settlers in the pioneer days of western New York is the best one yet. Ed has the ability to make the folks in his stories come alive. They get to be your friends, and when the story comes to an end you will feel as lonesome as I did when I had to part with them.

Send \$3.00 to *American Agriculturist*, Department S, Savings Bank Building, Ithaca, New York, for a copy of *THE SETTLERS*, read this story, and I am sure you will want to purchase more copies for your friends.—Hugh Cosline, Associate Editor.

EASTMAN'S CHESTNUT

MY FRIEND, Professor Raymond Birch, long-time member of the faculty of the New York State College of Veterinary Medicine, tells the following story, which was recently printed in the *Ithaca Rotary News*:

A motorist out of gas was walking back along the road, can in hand, when he met a farmer.

"How far to the first gas station?" he inquired.

"Well," was the answer, "it's about a mile and a half as the crow flies."

"Yes, yes," said the motorist. "But how far would it be if the d--- crow had to walk?"

AA's Farmers' Dollar Guide

INFLATION: Prices shot up following the start of fighting in Korea. Some reaction to belief that more inflation is ahead has come following improvement of Korean situation. From here it looks like continued, but perhaps slower, inflation. Reasons:

1. Administration has favored mild inflation on ground that government debt could never be paid at a low price level, plus knowledge that deflation with consequent depression usually brings change of party in power.

2. Regardless of victory in Korea, more money will be spent for armed services. This is inflationary, as is the bigger deficit that will result.

3. Government has not discouraged wage increases. Wages are chief production cost, and high wages do not spell "lower prices."

CONTROLS: Prediction is that controls will not be pushed until after election. Plan for piecemeal controls does not sound workable. New York Conference Board of Farm Organizations wired Senators Ives and Lehman protesting price controls at this time, and claiming that they would stifle production, encourage black markets while failing to prevent inflation. Furthermore, when controls are necessary, they should be applied fully rather than piecemeal. Controls probably will come, but it looks as though we might get all the disadvantages with little, if any, results.

TRANSPORTATION: Bottleneck is already developing in transportation. Freight car shortage following World War II was never corrected. Claim is that we need 40,000 more cars. Therefore, it is good business to get delivery of supplies you need on your farm very early.

POTATOES: Favorable August weather brought increase of 13 million bushels in the potato forecast, now standing at 420,286,000 bushels, 5 per cent above last year's yield of 401,962,000. Acreage was reduced, but yield per acre is 14 bushels higher than previous record. Price supports in '49 cost \$75 million and may reach \$100 million for this year's crop.

Someone points to the difficulties that buggy makers had when automobiles came in. Had there been a price support program on buggies then, we doubtless would still be producing buggies without regard to market demand—and dumping them!

STATESMAN TAFT: Never before have I wanted to move from the Northeast. But now I would like to reside in Ohio just long enough to work and vote for the re-election of Senator Taft. Because he put statesmanship above partisanship and personal advantage, he is being viciously attacked.

W. Averill Harriman charges that advice of Taft, if followed, would have "furthered the designs of the Kremlin." The President signified agreement. John L. Lewis says that miners should strike if Taft walks into a mine to campaign for re-election. If plan succeeds, other officeholders will hesitate about being statesmen rather than politicians.

Senator Taft's crimes include vigorous opposition to administration, bureaucracy and wasteful spending; also joint authorship of Taft-Hartley law designed to curb labor leaders without hampering just aims of labor unions. Incidentally, the Wall Street Journal asks "Who was Ambassador to Russia while 'appeasement' was the word?" The answer, Mr. Harriman.

CRUSADE: Headed by General Lucius Clay, the "Crusade for Freedom" is sweeping the country. Aim is to raise money by small gifts from millions of Americans, to be used to run several radio stations in Europe with programs directed behind the "iron curtain." Participation by many will show Russia that democracy still lives and will spike the Red propaganda that the stations are financed by capitalists.

DRAFT: In next 18 months a half million farm boys are likely to be drafted. Draft situation affecting farm boys is not clear. Watch this page for information as policies and regulations are determined. Remember that anyone in the Reserves is subject to call. Good farm help is likely to be scarce. If you have a hired man or son who is essential on the farm, tell it to your local Draft Board before he is drafted!

—Hugh Cosline

The Song of the Lazy Farmer

IT GIVES some folks an awful pain to have to raise a thing but grain; they wander 'round with frowning face if there's a cow upon the place, they claim that livestock ties them down so they can't hardly get to town, and argue that all birds like me are just as crazy as can be. Now this discussion don't mean much where there's just wheat or range or such, but where a fellow can decide to sell his feed in can or hide, why would he market grain or hay in any other kind of way? Year in and out, thru bad and good, I'd think that any smart man would ship just as much of ev'rything thru livestock as he can, by jing.

Now I don't mean to preach about the benefits from hauling out the fertilizer livestock makes, or how a livestock program takes a lot less stuff out of your soil, I simply claim it takes less

toil. I like to joyfully compare myself with neighbor over there; I've got as big a farm as he, but he works twice as much as me. His place is mostly oats and corn and he shows signs of being worn, while mine is nearly all in grass and I am full of vim and sass. He has to plow and cut and pick 'til it's a wonder he ain't sick, while I just sit upon the fence admiring me for my good sense.

2nd Straight Year...

WESTHILL FARMS'

Beacon Fed Birds

Win

New York State's
CHICKEN-OF-TOMORROW
CONTEST

George Enderly, Manager of Westhill Farms, Camillus, New York, with one of his winning Vanfress Cross Broilers. This farm is well-known for its R.O.P. work with New Hampshires.

First Prize to the entry of George Enderly, Manager of Westhill Farms, Inc. Mr. Enderly is a strong booster of the Beacon Feeding Program for breeders and growing young stock. He knows from experience that where smooth feathering, rapid growth, uniform fleshing and good color are at a premium, Beacon Complete Starter and Beacon Broiler Feed do an outstanding job.

For the past 3 years Westhill's Chicken-of-Tomorrow entries have been grown on the Beacon Broiler Feeding Program. During those years, these entries have finished second once (1948), and first twice (1949, '50). That's what years of Beacon research and painstaking large scale tests can do for Beacon feeders.

Says Mr. Enderly, "In our breeding work, we are trying to develop a female that will cross with meat-type males and produce enough eggs to make it profitable. With work of this type, feeding rations of the highest quality and uniformity are essential."

4 of first 10 JUNIOR WINNERS also BEACON FED

1st prize to the entries of Beacon Feeder Roy Curtiss III, Delmar, N. Y.

2nd prize to the entries of Beacon Feeder Jack Stelle, Syracuse, N. Y.*

8th prize to the entries of Beacon Feeder Nicholas Palladino, Jamesville, N. Y.*

9th prize to the entries of Beacon Feeder Willard Schwarting, Syracuse, N. Y.*

E. R. Eastman's great novel

The Settlers

is just off the press. This thrilling and human story of the courageous men and women who helped to build America will make absorbing reading for everyone, young and old. Put it on your Christmas list.

The 280-page book is handsomely bound in green and gold, with an attractive jacket. Send \$3.00 each for as many copies as you wish to American Agriculturist, Box 367-S, Ithaca, New York. We mail post-paid.

WHY GAMBLE?

You stand to lose plenty of time and money next Spring if your present haying equipment is unreliable or in need of repairs!

■ There's no use in taking chances when it comes to dollars and cents. That's why you should take a good look at your haying equipment *right now*. Will it stand up under another harvesting? Is it old, in need of repairs? How much will repairs cost?

Can it be operated by *one man* from a tractor—or does it waste valuable labor? Will it bale 10 tons per hour—or half that—or even a third? Ask yourself these questions—then compare the "77" with any other baler on the market today.

No other baler gives you the capacity of the "77"—*up to 10 tons an hour!* No other baler gives such *reliable performance* in all kinds of haying. The "77" has been *proved* by farmers in every state. No other baler has a record of *baling leadership* to compare with New Holland's—more than 10 years' experience as America's pioneer and leading manufacturer of automatic pick-up balers!

Make sure you get *the most for your money* by checking the "gamble free" chart below.

COMPARE!

HERE'S WHY YOU SHOULD OWN A NEW HOLLAND "77"!

Grant Hitchings— Dean of New York Apple Growers

By Hugh Cosline

GRANT HITCHINGS of Nedrow, Onondaga Co., N. Y., has been selling apples for over 70 years. In fact, one of his first experiences was in 1869, the year of the famous Cardiff Giant was "discovered" on a nearby farm. Grant seized the opportunity to sell apples to the crowd who came to see the newly discovered wonder.

"Have you ever figured out how many apples you have grown and sold in your lifetime?" I asked him the other day.

"No, I haven't," he replied, "but for the last 30 years this farm has produced about 75,000 bushels of apples a year."

"Apple trees become less profitable after they are 40 years old," continued Mr. Hitchings, "therefore we are continually pulling out old trees, especially varieties that have not proved profitable, and we usually set out from 300 to 400 trees every year."

"That would indicate," I said, "that you are still optimistic about the future of the apple business?"

"That is right," Mr. Hitchings replied. "I have always kept accounts and I have never seen a 5-year period when a good apple grower couldn't make some money. There have been many individual years when there were losses instead of profits."

Mr. Hitchings went on to discuss some of the changes in apple production.

More Room

"We used to set apple trees too close together. The old standard was 50 an acre; now we set out 35. Thereby we can let them spread out and keep the trees closer to the ground where it is easier to prune, spray and pick."

"Once we had 108 different varieties and now we are down to 20."

I asked Grant how many of these 20 varieties he could name offhand and he gave the following list: Duchess, Wealthy, Williams Red, Astrachan, Cortland, McIntosh, Gallia Beauty, Red Rome, Rome Beauty, Northern Spy, Rhode Island Greening, Red Delicious, Yellow Delicious, Macoun, Snow, Monroe (a new variety which looks good), Jonathan, Richard, and Webster.

"We are cutting down on the proportion of McIntosh and are increasing our plantings of Gallia Beauty, which we think is a good substitute. We are also increasing our plantings of Red

Rome and Websters."

The conversation turned to the Cooperative Association of Western New York Growers. Mr. Hitchings has some definite ideas on this.

He believes that, in order to market apples cooperatively, it will be necessary to form county or regional units with central packing sheds where the fruit can be packed by impartial workers. "No man can grade his own fruit," he said. "It looks too good to him."

"Then," he said, "the directors of the State-wide association can set a fair price and require that no member sell apples below that price. Furthermore, if a grower can't or won't grow apples of a quality to meet a standard set up by the directors, he should be warned, and if he doesn't correct the situation he should be dropped."

"The government has done us no good," he continued, "by talking so much about the tremendous size of some of our crops. This immediately makes a buyer's market. I have heard apple buyers say, 'You are asking too much money! The growers in western New York are practically giving apples away!' I use a different psychology. I put up a good-quality pack and we were able to sell all our apples last winter. When the buyers called back and wanted more, I said, 'We will do our best to supply you with what you want.' That made the buyer want them all the more."

About Price Supports

"If we must have price supports," said Grant, "the supports should be applied to a good grade of apples for canning, and the supports should be at a level which would just give a grower cost of production. All culls should be kept out of this grade. Growers should be able to put up a pack of 'U. S. No. 1's which will please consumers and which will enable the growers to stand on their own feet without any price supports for this grade."

Grant Hitchings was really the originator of the sod mulch system of handling mature apple trees. When he first proposed that producing orchards be left in sod instead of being cultivated, he aroused a storm of opposition, but time proved he was right.

I commented to him that some of the men I know who are growing vegetables think that it is quite important to have manure to add to the soil. He replied, "I have always kept

(Continued on Page 19)

"What Freedom Means to Me"

A CONTEST

WHEN our forefathers wrote the Constitution they were fearful of all government; therefore, they put definite limits on the power of our federal government. They did this in two ways: (1) by establishing three departments—legislative, judicial, and executive—each with certain checks on the others, and (2) by making the Bill of Rights a part of the Constitution with very definite statements as to what the federal government could not do.

Now, thoughtful students generally agree that the power of our government has grown, particularly in recent years, and as it has grown the freedom of individuals has decreased. In fact, many people are convinced that we have gone so far that personal liberty may be entirely lost.

We are interested in knowing what freedom means to the young folks of the Northeast, and whether or not they consider it more important than "security." Therefore we are offering a first prize of \$20; second prize of \$15; third prize of \$10 for the best letters written by boys and girls who have not yet reached their twenty-first birthday, on the subject "What Freedom Means to Me."

Letters should be not more than 500 words in length and they should reach us not later than November 1. Address them to Freedom Contest, American Agriculturist, Box 367, Ithaca, N. Y.

CULLS

Most Purina Dealers are ready and waiting to come out and help you cull. They'll help you take non-producers from your old hens. They'll help you grade out the poor pullets. Just call your dealer, or drop in and see him.

Keeping Enthusiastic About Life

Dr. Norman Vincent Peale, of the Marble Collegiate Church in New York, challenged me in his booklet, "Keeping Enthusiastic About Life." Write him for a copy. He tells how that old troublemaker, the devil, tries to put us out of business. But he also tells about the famous naturalist, John Burroughs, who said on his eighty-first birthday: "I haven't lived long enough. There are so many things that I don't know and want to know. I have enjoyed every minute of this life. I would like to live every day over again."

■ ■ ■ ■

Each one of us has to live his own life. We can't all be John Burroughs, Henry Fords, or Kagawas, or world figures in one field or another. But with my keen imagination I can walk with those men. I can read the written thoughts of great minds. I can profit by the actions of good men. And as a result of all three I can become a bigger and better man myself. So I say let's pick out our heroes and walk along part of the way with them, trying to keep step as we reach toward higher levels. That will keep us Enthusiastic About Life—and help us grow.

■ ■ ■ ■

On all sides today there are problems. We all know that. But we can't lick them with negative attitudes. Joe E. Brown, that great comedian of movies and stage, has had his full measure of joys and sorrows. His philosophy is ■ sustaining and contagious one, when he says: "The three R's are right in their place, but the three L's: LOVE, LEARN, AND LAUGH, are righter, right now."

Let's "Hang ■ Halo around our daily tasks," and work in the spirit of men and women who are creating masterpieces. Let's have faith and purpose and enthusiasm for the life we live.

Daringly,

WM. H. DANFORTH

A home devoured by flames, and perhaps children and parents burned to death. Every three minutes a fire breaks out, and over 2,000 of those are in our homes!

Trying to "beat out a fire" only fans it into stronger action. A cool head and a handy fire extinguisher has saved many farm homes.

Fire's Out!

By LOUISE PRICE BELL

fact, the two main causes of fires in the past year were matches and smoking. If you like statistics to back up what you hear or read, here they are: 29% of all the fires were caused by matches and smoking, 10% by the misuse of electricity, and the remaining 61% by 17 other different causes.

Careful home-owners keep fire extinguishers in their homes, but whether you do or not, remember that water won't put out all types of fires, and trying to beat out a fire often merely "fans" it into greater burning. If water is thrown on a grease fire (such as occurs when a steak catches on fire in the broiler), the flames will spread. Since water is a conductor of electricity, it should never be used on an electrical fire, or a serious shock, even electrocution, may result.

The most common types of extinguishers have baking soda as their

base, but soda alone won't put out a fire, although it is far better than water or "beating." Sand is a good douser, and heavy rugs will often smother fire. Chemical fire extinguishers are most effective in the early stages of a fire. One on each floor in a spot where readily accessible is often worth far more in the beginning of a home fire than a whole fire brigade which has to come from any distance. Remembering to have these appliances recharged periodically is important, or else they won't act efficiently when desperately needed. Some types are recharged once a year.

For a chimney fire a few pounds of salt thrown in at the top is probably the best handy extinguisher. A garden hose stored where handy to a water pipe is also good fire protection, but don't use water to put out a fire caused by inflammable liquids, as it will have the opposite effect. A pail of sand, dry earth, salt or even sawdust is recommended for such fires, or smothering them with a rug or blanket if the fire isn't too large.

The most effective cure for any fire is never to let it start at all.

WHAT WOULD YOU DO?

WHAT WOULD you do in case of fire? We have all heard about the old woman who threw her best china teapot out the window, and then carried her featherbed downstairs. It sounds silly, but people are apt to lose their heads in case of fire. A fire calls for quick thinking—and also for planning in case of fire.

After a sad experience, we often find out the hard way how we might have avoided it. For that reason, we would like to hear from readers who have had fires in their homes. Tell us about your experience and what you are now doing to prevent a recurrence of the ordeal.

Maybe you have never gone through a fire, perhaps because you are taking precautions to avoid it or to handle it quickly if it occurs. If so, we would like to hear from you too, and to know what you do or plan to do to avoid or handle fires. For example, do you have a fire extinguisher in your home? What kind? Is it recharged periodically? Do the members of your family know how to use it? Have you ever had a family conference on what to do in case of fire? Or a family fire drill? Do you have any kind of a fire escape from upper stories, such as a heavy rope fastened to a metal ring in floor or baseboard? Or do you just have a vague idea of tying the sheets together if you have to get out a second floor window? Are you careful about fire hazards, such as frayed electric cords, trash piles, inflammable cleaning fluids, etc.?

This is a vitally important subject for every family. Take time to write us—today if possible, and not later than October 21. We will pass the information and suggestions we receive from you along to other readers. Address your letter to E. R. Eastman, Editor, American Agriculturist, Box 367-F, Ithaca, N. Y.

OCTOBER 8-14 IS FIRE PREVENTION WEEK

Your products sure do get around

One thing especially about our country astonishes many foreign visitors. The abundance of our food. And especially meat! They see plenty of fresh, wholesome meat for everybody, everywhere. In hundreds of thousands of stores. In the smallest villages as in the largest cities. That's something many foreign people don't know at home.

Here we've come to take it for granted. You raise the meat animals on your millions of ranches, and farms, and feed lots across the nation. They go to one of scores of markets...

By what "machinery" are they then made into meat, and distributed to every super-market and every crossroads store from Maine to California?

That's the job of the meat packers—small and large, local and nation-wide. They are the Manufacturing Department of your business—"disassembling" your animals into the meat that people eat. They are also your Marketing Department—shipping the perishable meat under refrigeration to the consuming centers of population. Finally, they are your Delivery Service—seeing to it that three hundred thousand stores, and more, stay stocked with the cuts their customers (and yours) want to buy.

To do our share of this job there are 50 Swift packing plants—269 branch sales houses—1,600 meat-plant sales routes serving every portion of the United States. Our cost of delivery from plant to store averages only about 5¢ out of each \$1.00 of sales. Thus we help deliver meat at a price which brings the greatest possible return to you livestock producers.

That's our part in the Meat Team. Together, you who produce it, the retailers who sell it, and we who process and transport it, perform daily—year in and year out—America's "Miracle of Meat."

OUR CITY COUSIN

"Country life is not so hot,"
City Cousin liked to brag...
It warmed up an awful lot
When he kicked a "paper bag"!

Little and Big ... We Need Both

America is a big country—3,022,386 square miles. Denmark is a small country—16,571 square miles.

In Denmark industry and agriculture operate on a small scale. In America the opposite is true. Mass production, mechanized farming, big food stores, are American phenomena. But their large scale does not mean they are necessarily good or bad.

The bigness of America's operations in agriculture, manufacturing and distribution results from America's bigness. To produce the means of livelihood in a big country with large resources, a large population, and high living standards, bigness in some country and city business activities can't be avoided. So bigness in itself is neither a vice nor a virtue, but a natural economic development.

Little-ness is nothing to be ashamed of, either. Admittedly, in some forms of business the small businessman excels and he will continue to prosper in these fields simply because of the service he gives. There is room for Denmark and America in the world, and room for both big and little **F.M. Simpson.**

Experience is the best teacher, but she gets no apples or applause.

A thoughtful man's mind is like a parachute... it works best when it is open.

Martha Logan's Recipe for PORK SAUSAGE TOPPERS

(Yield: 6 servings)

1 pound pork sausage meat 2 to 4 acorn squash
1 small onion, chopped fine 1 can cream of celery soup

Mix sausage and onion and form into patties. Wash squash and cut in half crosswise. Place squash cut side down on a shallow pan and bake in a hot oven (400°F.) for 35 to 40 minutes or until tender. Bake sausage patties in a shallow pan in the same oven for 30 minutes or until thoroughly done and lightly browned. Top squash with sausage patties and serve with hot undiluted cream of celery soup.

Get Full Value from Feed Crops

by C. M. Linsley
Soil Extension Agronomist
Univ. of Illinois, Urbana

C. M. Linsley

Most of the fertility in feed crops is in manure. If the feed crops raised on the farm are fed on the farm and the manure is carefully handled, most of the fertility taken from the soil by these crops can be returned to the soil to be used again. Three-fourths of the nitrogen, three-quarters of the phosphorus and nine-tenths of the potassium and two-fifths of the organic matter in the feed is found in the manure.

Too few farmers, however, realize how much of the fertility value of manure can be lost before it gets back to the land. Careless handling of this valuable by-product of livestock feeding takes a sizeable slice of the income of many farmers. A large part of the loss can be prevented if the following steps are taken:

1. See that floors of stalls and sheds are watertight, and use enough bedding to absorb all liquid manure.
2. Haul manure daily if possible. On many dairy farms, the stalls are cleaned daily and the manure hauled directly to the fields. It is important to spread the manure daily. If left in piles either outside or in stalls for several days, manure ferments and loses nitrogen into the air.
3. Leave manure in the cattle sheds. If manure is left under the cattle in sheds until a convenient time to haul it, it will be tramped on and kept moist and well-packed. Little nitrogen and organic matter will be lost through the decay.
4. Pave the feed lot. Because of the manure saved, the paved feed lot soon pays for itself.
5. Keep livestock on good pasture. Animals on pasture spread their own manure with little loss of its fertilizing value.

Nutrition is our business—and yours

SELL HER MILK!

Her calf doesn't need it
...with **KAFF-A**

The safe replacement for milk!

Raise healthy calves on vitamin-high Kaff-A! A million healthy heifers have already been raised on Kaff-A. It's the safe replacement for milk... the one you can be sure will produce healthy calves! So don't take a chance on an inferior imitation of Kaff-A. A nickel saved on feed may cost you many dollars if your cows turn out to be poor milkers because of lack of proper nutrition during their starting period. Be safe! Feed Kaff-A! Its vitamin content is known! Kaff-A has a nutritious dried buttermilk base. It also contains other dairy by-products, some cereal products, plus plenty of Vitamin A and D Feeding Oil!

Every box gives you up to 500 extra pounds of milk to sell! Just 1 lb. of Kaff-A replaces 10 lbs. of milk in calf feeding! That means every 50 lb. box of Kaff-A fed with low-cost hay and grain can release as much as 500 lbs. of milk you can sell! And you'll find that adds up to a handsome profit!

Easy to feed! Just mix one part Kaff-A to 9 parts of warm water, and begin to feed on the 4th day! By the 10th day your calves will be weaned! So feed Kaff-A and sell your cow's milk! Kaff-A is the safe replacement for milk!

Better Grass Means Extra Dollars

By George Serviss

SILO FILLING is just about over, and the grazing season is rapidly approaching an end. Cows will soon be stabled for the winter and grasslands will soon become dormant until next spring.

This past season I saw in my travels around the Northeast more top pastures than ever before. They still constitute only a small part of the total pasture acreage but progress is definitely being made.

It is interesting to look back and review what has happened on many individual farms where, during the past 15 years, we have been endeavoring, along with many others, to promote the cause of better pasture and haylands.

The first thing most dairymen think about when considering such a program is the effect it will have on their purchased feed bill. It is very easy to point out how purchase of feeds and feed grains may be reduced and milk production maintained. One does not need to stretch the truth either; the figures speak for themselves.

However, the dairyman soon finds that his cows are producing more milk as a result of the extra pasture and hay they are eating. He therefore buys about as much feed as before, but feeds less per 100 pounds of milk produced. It is not unusual to find production per cow increase from 1,000 to 2,000 pounds of milk a year just as a result of full roughage feeding. Young stock benefit and usually grow out larger than their dams. Large cows on the average produce more milk than small ones. In fact, for the Holstein breed each 100 pounds increase in live weight means nearly 800 pounds more milk per cow per year.

Four Choices

While these things are taking place, another very important development is also evolving. The dairyman finds that he has more pasture, hay and silage than his herd can consume. He can then do one of four things. First, carry more cows than he usually does, if he has stable room for them. This is sound economy and cost account data indicate it is good business to carry all the stock possible up to the limit of the farm's capacity to produce roughage. If he does not have stable room he can

of course build additional, but that is expensive under today's costs, though he often does it. Another alternative is reducing the hay, pasture or corn silage acreage and growing more of his own grain, particularly corn if soil and climate are favorable. Lastly, instead of grain he may decide to grow a few acres of some cash crop. In any event, his farming enterprise becomes a larger one in terms of everything except acreage.

There is still a feeling by many that pasture and hayland improvement must start in the spring. This is not true. There are many things that may be done this fall. Seeding of course should wait until spring, but liming in preparation for a spring seeding, and the liming and fertilization of established pastures and haylands, may be done as well this fall as next spring. In fact, the land is usually in better condition to get over with spreading equipment in the fall than in the spring.

Commercial Fertilizers

Mixtures such as 0-20-20, 0-19-19, and 0-14-14 are usually recommended where legumes predominate. Where the true grasses predominate, a 10-10-10 is normally recommended, particularly where pasture acreage is limited and highest possible carrying capacity is essential. Some authorities recommend 5-10-10 where the proportion of legumes and grasses is about equal, while others are inclined to favor the no nitrogen mixtures such as 0-20-20 in order to favor the legumes. Superphosphated manure is endorsed, of course, for all grasslands with only the reservation of keeping it off pasture land that will be grazed early.

Many dairymen are doing an excellent job of seeding establishment, but only a few are doing anything in the way of maintenance fertilization. As we have said before, no one today would think of growing corn for three continuous years on one application of fertilizer. That is exactly what many are attempting to do with their pasture and haylands. Whether the crop is planted each year or not, it still needs fertilizer or manure to keep it productive. Fertilized grass can rightfully be said to be the cheapest feed on the farm.

How to Make Sauerkraut

Please print directions for making a crock of sauerkraut. — D. C., New Hampshire.

WINTER CABBAGE is best for making sauerkraut. It should be kept at room temperature about a day before using, so that it will shred easily. A 5-gallon stone jar is a convenient container, although a keg or small barrel is satisfactory. Absolute cleanliness is necessary. Wash and scald the container, and, if it has been previously used for kraut, air it in the sunshine. Wooden containers should be thoroughly washed, dried, and brushed with melted paraffin.

To fill a 5-gallon jar requires from 40 to 45 pounds of cut cabbage and 1 pound of cooking or dairy salt. Make the total amount at one time. A long knife with a straight edge will do the work, but it takes a long time. A kraut cutter, set about as thick as a dime, is recommended by the New York State College of Home Economics. The College gives the following directions for making barrel or crock kraut:

Remove the outer leaves, wash the heads, dry, then cut them into halves

or quarters. Shred the cabbage into the container. Cut about 5 pounds at a time and lightly mix with it 2 ounces, or a scant ¼ cup of salt. Cores are left in if finely shredded. Pack the salted cabbage carefully and evenly with a wooden tamper, a potato masher, or a milk bottle, or any suitable object which will press out air and pack the cabbage tightly, without bruising. Continue cutting about 5 pounds cabbage at a time, mixing it thoroughly with 2 ounces of salt, until the container is filled within a few inches of the top. Pack each layer firmly.

Cover the kraut with a clean white muslin cloth, and then with a round paraffined board that just fits within the container. On this is placed a glass jar with enough water in it to weight down the board so that juice comes to the bottom of the cover but not over it. This will keep the cloth moist, but juice will not cover it. It may be necessary to vary the amount of water in the glass jar from time to time in order to keep the cover at just the right level. Commercial manufacturers are

(Continued on page 13)

Plan Now for an Early Garden Next Year

By Paul Work

MY GARDEN was not very early this year. For one thing I am in a community garden. This is a great plan for those who have no space or suitable soil at home, but one has to wait until community plowing is done in the spring. I was delayed even beyond that. But our first tomato was picked July 15 and there were plenty of others a week later and from then on. Also a Yankee Hybrid summer squash from seed was taken the same day as the first tomato. Hot-kaps had helped a little though their effect this year was not as great as sometimes. We had lettuce, spinach, onions, trans-plant beets, and, of course, radishes by mid-June in spite of the late start.

Our early tomatoes were from a selection of Henry Munger's that is not yet released—he doubts if it is good enough. I did not realize that it was a short-branching or so called "determinate" variety, with vine habit like Victor or Bounty. So I pruned and trained some of them and let others run. Well, the trained ones have given us a fine set of good sized fruits, while the ones that were allowed to "do what comes naturally" had a good many small fruits, which is one of the problems with some of our newer varieties—to get both earliness and size. I don't know whether history will support the idea but it may be worth exploring further. These short branching varieties would only need 3 or 4 foot stakes.

Get Ready for an Early Start

Now is the time to plan for the early garden for next year. I'm in favor of the big garden—the "patch", they call it in southeastern Pennsylvania—for sweet corn, main crop peas, beans, tomatoes and potatoes. Then you can charge up and down the rows with a nice big tractor. But there should also be a little garden to be planted early and to receive more tender care. It will pay off at the dinner table. It can be plowed in the fall and worked with a wheelhoe the first time it gets dry enough in the spring. Then slip in 25 foot rows of radish, lettuce, beet, carrot, spinach, onions and several rows of peas. Start a few beet, lettuce, and cabbage plants in the kitchen window. Then you eat lettuce Memorial Day, with radishes and green onions and a dish of spinach, beets by June 10 and cabbage by June 25; depending a bit of course on where you live and the kind of soil you have. But don't blame the soil too much. Only the very heaviest refuse to be managed this way. And don't make that plot too big—25x25 feet to start with. Then its care is no burden.

I've been amazed with the small amount of time required for my two gardens each 25x50 feet. My log says 43 hours from May 2 to September 1—about 2½ hours a week, and I've done quite a bit of tinkering besides the bare essentials. A big city daily said this summer that 14 hours a week will take care of a 50x50 garden!

Mulching the Garden

One of my tinker jobs has been to try out various forms of mulch. I've tried tall grass from the roadside and that is good—likewise tree leaves, old hay or straw or even coarse manure. Put it on pretty heavily when plants are well started—on tomatoes and vine-crops just before they start to run, on corn a foot high. It will keep down the weeds, curb moisture loss and keep

fruits clean, beside adding organic matter to the soil. I've also used pine needles with no apparent harm and a little garden refuse such as peas and bean vines and even early cabbage plants.

Better be sure you have a fair supply of nitrogen in the soil when you mulch with such materials. If in doubt give it a half pound of sodium nitrate per hundred square feet (200 lbs. per acre).

Paper—a black asphalt sheet—is all right too but a little expensive. An aluminum company is pushing their sheet metal, claiming advantages over paper, especially in temperature relations. I have some and it seems o.k., but it, too, is rather costly.

Use of mulch depends a good deal on how much labor is involved. I can wheel-hoe a 50x50 garden in forty-five minutes and do a lot of hoeing and hand weeding in the rows in another half hour or hour—if I don't let them get a start. I certainly find it "cheaper" in labor to wheelhoe and hoe than to carry pine needles 200 yards in a two bushel basket! But who would ever try that, except a hopeless experimenter!

Anyway, get a little plot ready this fall for early planting next spring and see how it works.

A FORUM FOR Backyard Gardeners

African Violets

Some of my friends talk as though the growing of African violets were difficult. There are some things that you need to watch, but we haven't found them too fussy. Here's how we do it:

We cut off and start quite a number of leaves, putting a half dozen in one small plant jar. We root them there rather than in water because we seem to have a high mortality when they are rooted in water. We have had fairly good success by filling the plant jar partly full of good garden soil and putting on one-half inch of sand on top, which seems to prevent the "damping off" fungi from killing them.

One of the big advantages of rooting in dirt and sand is that you can transplant them with less loss. You will find that it will take a long time for a new plant to start, but as long as the leaf stays green and healthy, don't give up hope!

Winter Bloom

It is fairly simple to have paper white narcissus blooms for Christmas. About the middle of October, put the bulbs in a dish and support them with coarse gravel or cracked stone. It is not necessary to keep them in the dark, but it is important that they be kept in a cool place until they get started; in fact, they should not have too much heat at any time. Just keep them watered and you should have some nice blooms in due time.

You can also have daffodils and tulips in February by planting the bulbs in dirt in October. However, it is necessary that the bulbs undergo some freezing weather before they are brought inside. You can dig up clumps and leave them outside until after a couple of good hard freezes; then bring them inside and leave them in the dark until they develop good root systems.

"You ought to get a medal!"

Attendance and Show Records Broken at New York State Fair

THE 1950 New York State Fair, called the "best ever" by almost everyone attending it, attracted a record-breaking crowd of 383,766 to Syracuse during the eight days from September 2 through September 9. The previous record of 380,000 was made in 1941 when the fair lasted nine days.

Winner of the \$1,000 first prize for fruit exhibits was the colorful and attractive show of processed and fresh peaches presented in the Horticultural Building by the New York State Peach Growers Association. Second prize of \$900 was awarded the Finger Lakes Fruit Products Co-op of Watkins Glen for an exhibit of grapes and grape products. Other prizes were: Third, New York State Cherry Growers Ass'n.; Fourth, National Grape Co-op Ass'n.; Fifth, Western New York Apple Growers Ass'n.

Six prizes, ranging from \$325 down to \$50, were given for organizations' collections of vegetables, in this order: Rochester Area Growers Co-op, Onondaga Vegetable Growers Co-op, Oswego County Vegetable Improvement Ass'n., Schenectady Market Growers Co-op, Ontario County Vegetable Council, and Genesee-Orleans Vegetable Growers Co-op.

Cow Champions

Champions in the various cattle divisions were:

HOLSTEIN-FRIESIAN

Grand Champion Bull: Smithland Supreme Champion, Forgate Farms, Jamesburg, N. J. Reserve Grand Champion Bull: Strathaven Sovereign Governor, Forkey Farms, Brushton, N. Y. Grand Champion Female: Cornell Pathfinder Colanhus, Cornell University, Ithaca, N. Y. Reserve Grand Champion Female: Fugiesang Ruby Rag Apple Supreme, Harden Farms, Camden, N. Y.

GUERNSEY

Grand Champion Bull: McDonald Farms Ideal Mars, Marsh Farms, Canandaigua, N. Y. Reserve: McDonald Farms Standfast Odin, McDonald Farms, Cortland, N. Y. Grand Champion Female: McD F. Pre-Jedetta, McDonald Farms. Reserve: McD F. Pre-Lidelia, McDonald Farms.

AYRSHIRE

Grand Champion Bull: Clear Dawn Prince, Meadowcraft Farms, Granby, Mass. Reserve: Pennyfadzeoch Perfect Blend, Meadowcraft Farms. Grand Champion Female: Talisman Emerald's S. Trinket, Meredith Farms, Topsfield, Mass. Reserve: East Raws Harebelle, Meadowcroft Farms.

JERSEY

Grand and Senior Champion Bull: Jester Prince Wonderful, Loch Lee Farm, Williamsville, N. Y.; Reserve Grand and Junior Champion Bull: Chief's Son of Etta, W. L. Johnson, Vestal, N. Y. Grand and Senior Champion Female: Sybil Design Etta, W. L. Johnson. Reserve: Blind Date, Pioneer Farms, Old Lyme, Conn. Junior: Sybil Design Etta Ideal, W. L. Johnson.

BROWN SWISS

Grand Champion Bull: Judds Bridge Baron, Mt. Auburn Farms, Auburn, N. Y. Reserve: Cornell Lucky Oran, Cornell University. Grand Champion Female: Nancy Bobette, L. G. and J. L. Boyd, Canandaigua, N. Y. Reserve: Coxing Clooe Imperial Heidie, Leon Button, Rushville, N. Y.

HEREFORD

Champion Bull: Meteor Corneller, Cornell University. Reserve: C. L. Royal Lad, Cedar Ledge Farm, Stafford Springs, Conn. Champion Female: C. U. Starlight 13th, Cornell University. Reserve: N. H. F. Gay Maid (twin), Normandy Hereford Farms, Wrentham, Mass.

SHORTHORN AND POLLED SHORTHORN

Champion Bull: Beathon Grandmaster, Warwick Manor Farms, Lititz, Penna. Reserve: Lochdale Hero, Lester Ingham, Fredonia, N. Y. Champion Female: Warwick Manor Farms. Reserve: Beauty 97th, Lester Ingham.

ABERDEEN-ANGUS

Grand and Junior Champion Bull: Bent Lee Ensign 8th, Bent Lee Farm, Brant Lake, N. Y. Reserve Grand and Senior Champ: Dal' Bairn Bandolier, Dale Fletcher and Son, Pine Plains, N. Y. Grand and Junior Champion Female: Mole's Hill Elba 108th, Mile's Hill Farm, Millerton,

N. Y. Reserve Grand and Senior Champion Female: Ess Kay Miss Burgess Maid, Ess Kay Farm, East Aurora, N. Y. Grand Champion Steer: Mole's Hill Farm. Reserve Grand Champion Steer: Star Dust, David Taylor, Lawtons, N. Y.

4-H Livestock

This year's 4-H Club entry of 600 head of livestock in the boys and girls department of the fair was the largest in history with livestock from 45 counties. Jerry Coyne of Livingston County was the grand champion 4-H dairy showman and champion Holstein showman. Other champion showmen were: Abigail Stimson, Tioga County, Ayrshires; Henry Thomas, Jr., Cortland, Guernseys; Leon Button, Yates County, Brown Swiss; and Gordon Hilton, Albany County, Jerseys.

Breed championship winners and their counties follow:

Holstein: Grand and Senior champ, Donald House, Livingston; Reserve Grand and Reserve Senior, Jerry Coyne, Livingston; Junior champ, Roger House, Livingston; Reserve Junior, Alfred Marton, Monroe.

Guernsey: Grand and Junior champ, Gilbert Baright, Dutchess; Reserve Grand and Reserve Junior, Duane Dennis, Wayne; Senior champ, Larry Bush, Greene; Reserve Senior, Calven Smith, Dutchess.

Ayrshire: Grand and Senior champ, Richard Cook, Franklin; Reserve Grand and Reserve Senior, Robert Moran, Livingston; Junior champ, Joyce Ann Tucker, Allegany; Reserve Junior, Abigail Stimson, Tioga.

Brown Swiss: Grand and Senior champ, Leon Button, Yates; Reserve Grand and Junior champ, Joyce Loson, Lewis; Reserve Junior and Senior awards went to Richard Byrnes, St. Lawrence, and Walter E. Smith, Jefferson.

Jersey: Grand and Senior champ, Dorothy Benedict, Delaware; Reserve and Junior champ, John H. Melvin, Onondaga; Reserve Senior, George R. Jennings, Greene; Reserve Junior, Rosetta Krake, St. Lawrence.

Swine Champions

State Grand Championships in four breeds of swine were awarded to: Duroc, boar and sow, Allen Post, R. D. 1, Auburn, N. Y.; Poland China, boar and sow, E. S. Cable and Son, East Canton, Ohio; Chester White, boar and sow, W. D. Auble and Sons, Trumansburg, N. Y.; Berkshire, boar and sow, John Blick and Sons, Williamson, N. Y.

In the 4-H swine division, Michael Adams, Wayne County, won the grand championship with his Hampshire market pig and Robert Reid, Livingston, had the reserve grand championship with a Yorkshire.

Grange Awards

The Morrisville Grange of Madison County won first prize for subordinate grange exhibits, followed by Oakfield Grange, Genesee; Castle Creek Grange, Broome; and Gouverneur Grange, St. Lawrence. In the Pomona Grange competition, Livingston County was first; Oneida, second; and Washington, third.

Silver Cup Winners

From the winners of several classes judged each day in the Women's Building, the outstanding winner was presented a silver cup in the "New York State Foods for New York State Families" contest. These winners, and the entry that won them the cup, were: Miss Kathleen Murray, Burdette, white and chocolate drop cookies; Mrs. Chester Smith, Homer, won 10 blue ribbons with 10 canned entries; Mrs. Herman Niedzielski, East Syracuse, yellow chiffon cake; Mrs. Lena Hooper, Syracuse, jams and jellies; Mrs. Roger Loveless, Baldwinsville, potato yeast coffee ring; and Mrs. E. T. Munson, Syracuse, sour cream gingerbread and fruit bread. On Potato Day, Mrs. Harold McDowell of Jordan received the \$25 cash award from Pepperidge farms for her loaf of potato bread.

AMERICAN AGRICULTURIST
10 North Cherry St., Poughkeepsie, N. Y.

The Question Box

I read some directions for propagating grapes by cutting which said that the cuttings should be put in upside down. Is there a good reason for this?

The directions refer to bundles of cuttings which are stored by burying with the cuttings upside down. The reason given is that the butts which are fairly close to the surface will callus over more readily if they are heeled in that way. With the butts down, the buds are likely to start growth before a root system is well started.

Our cellar does not seem to be damp, but it has such a musty odor we cannot store any fruit or vegetables there. How can we correct this?

Ventilate more—even if you have to install an electric ventilating fan; clean up and get rid of any old musty boards, crates, etc.; dust chloride of lime over the floor and use some of the air purifiers (Air Wick, Good Air, etc.) you can buy at the grocery store.

Spray or sprinkle walls and floor with copper sulfate solution — one pound in five gallons of water.

—Ed Mitchell

When was ladino clover first introduced into the country?

The USDA brought some seed here from the northern part of Italy in 1903 and it was tried out in the Northeast with some success. Its use on farms became fairly common in New England before it gained much importance in New York State.

Why do we hear so little about alfalfa these days and so much about ladino and birdsfoot trefoil?

Where alfalfa can be grown well, it is still the best perennial legume. Probably too little has been said about it in the last few years on the basis that everybody knew about alfalfa but relatively few people knew about ladino and birdsfoot.

Are there any figures to indicate what is the best way to put up hay?

We think such figures are inconclusive. What's the best method for one man may not be the best for his neighbor. We have recently talked with men who are following different practices, and here is about what they said.

A man putting in dry, chopped hay liked it because it was fast, and since he has followed that method his cows have averaged to increase 100 pounds of milk a year.

A man who was field-baling said he got his hay in earlier than he used to, and because the bales were sliced he saved 45 minutes every time he fed hay to his cows.

A man who was using a buck rake thought it was the best method yet where fields were close to the barn.

What figures we have indicate that there isn't too much difference in the cost of putting up a ton of hay if each method is used efficiently. Obviously, the man with a small acreage must keep his equipment investment low.

Aside from mulching thoroughly, is there any good way of increasing the soil acidity for a few blue berries in the home garden?

One good way is to use ordinary alum (aluminum sulphate) at the rate of 1 pound to 100 sq. ft. This is in addition to mulching, which should be continued from year to year.

I have heard some comment relative to setting out strawberries in the fall. When can this be done and will I get a crop next summer?

Fall setting of strawberries is recommended for two reasons: It gets the work done before the rush season, and the roots have a little more time to develop. You can set them as late as November, but they should be mulched to protect them. You should not plan on a crop next summer and you should remove any blossoms that appear in the spring.

— A. A. —

HOW TO MAKE SAUERKRAUT

(Continued from Page 10)

very particular about this. If scum appears, remove the cloth, and replace with a clean one; or the first one can be boiled, sunned and reused.

The best kraut is produced from 65° to 70° F., requiring a month to 6 weeks for curing properly at these temperatures. It can then be left as it is and stored in a cool place; or it can be covered with paraffin, or packed into jars and canned. To can kraut, heat it to between 110° and 130° F. in its own juice, pack it into clean, hot jars, partially seal the jars and process 25 minutes in boiling water bath, keeping water 1 to 2 inches above tops of jars. Remove the jars, complete the seal, cool and store.

Victor E. Grover, right, subscription manager, and Harry L. Ennis, New York State field manager of American Agriculturist, are looking over the figures in a recent survey which shows that American Agriculturist is the best read and the best liked farm paper in the area. "Vic" started working for American Agriculturist more than 23 years ago when he was a student in Business Administration at Syracuse University. Harry has been working for A.A. 12 years.

Note how Squibb Ointment Veterinary disperses penicillin throughout a treated quarter. One tube, containing a dye instead of penicillin, was instilled into one quarter of a cow's udder. The cow was killed 17 hours later—the udder removed and frozen—and the above cross-section photograph then taken.

thorough penicillin dispersion

the reason this
ointment is
effective in
9 out of 10
cases of MASTITIS

Streptococcus agalactiae is the cause of approximately 90% of all mastitis cases.

For this most common kind of mastitis, the most effective treatment known today is penicillin in a special ointment.

There is no better treatment.

Squibb Penicillin Ointment Veterinary has been used successfully to treat millions of cases of mastitis*. It's known, accepted, proved!

The reasons for its success are these: • Disperses thoroughly throughout entire treated quarter. • Fights mastitis* organisms from 48 to 72 hours. • In many cases, one tube is sufficient. • It's stable, non-toxic, non-irritating. • It's a clear ointment, won't discolor milk. • It's easy to use and is inexpensive.

Squibb "Instant-Use" Penicillin is sold by druggists only. Ask for it—keep it on hand. Write for mastitis folder. E. R. Squibb & Sons, Veterinary and Animal Feeding Products Division, Dept. AA 10, 745 Fifth Avenue, New York, New York.

*Due to *Streptococcus agalactiae*, the cause of the largest percentage of all mastitis cases.

SQUIBB - A NAME YOU CAN TRUST

Only 10 More Years
and I'll Be 65...

Then I Can Retire

Yes, thanks to my Farmers and Traders retirement plan, I can retire when I'm 65, with an income that will let me live comfortably and travel when and where I please.

You too can plan for retirement if you act now. Find out about the new Farmers and Traders policy that combines retirement and family protection in one low-cost policy.

PHILO BURT Support
Aids Injured or
Deformed Back

"Almost helpless from a weak back," says an elderly woman, "your appliance gave support which brought almost instant relief and I have completely regained use of my back."

Like A Pair Of Supporting Hands Gentle, uplifting support, relieving downward pressure. Much more comfortable than Plaster Casts, Leather or Celluloid Jackets, Steel Braces and it is less expensive. Light, cool, flexible and easily adjustable. Doesn't show through the clothes.

THOUSANDS BENEFITED In our FREE book, many users tell of relief, improved appearance, even permanent correction. Examples: "Every night I can see my back straighter; feel fresher, better, happier." "A spinal sufferer 16 years it seems good to work again without awful backache."

30 DAYS TO PROVE VALUE Physicians recommend the Philo Burt, and we work with your Doctor. Investigate this proven Appliance if your back is weak, injured, diseased, or deformed. Reduced price within reach of all.

AMERICAN AGRICULTURIST

"Old Man Weather" Slows New York Crop and Fruit Harvest

By L. B. SKEFFINGTON

THE weather in upstate New York has been about as bad as could be for fall work on farms. September began with a long period of drizzling rain which put most farmers back on their work from a week to 10 days.

Because of wet weather, harvest of tomatoes was delayed. Much cracking and some mold was found when pickers got busy again. Continued cold weather and threats of frost make the last picking in doubt. Many growers have found their yield much less than expected, and unseasonable conditions have resulted in considerable downgrading.

Dry beans also have taken a beating between beetle, blight and bad weather. The peach harvest was slowed and some brown rot showed up. The Elbertas failed to ripen anywhere near their normal time because of cold. Some growers report a fungus rot on prunes, in spite of spraying. Slow ripening and picking have allowed some early apples to move out of the markets. Potato harvest has been delayed, but unless more difficulties are encountered the yield should be good.

Pastures Grow Slowly

For the most part, pastures are green and growing, but slowly. Dry weather during the latter half of August had slowed them down. Rains since have turned them green and kept them growing, but cold weather was a drawback. By mid-September many dairymen in Western New York were keeping their cows in nights, because of cold, where normally they would have been out a week or two later.

Preparing of ground for wheat was delayed, but it looks as if most of the intended acreage will be in on time. Cutting of corn silage is under way, but where farmers had wheat to plant this had to wait. There is complaint of considerable soft corn. Generally corn suffered from cold nights through the summer, and a couple of weeks of warm weather following the rain would have been a big help. As it is, the problem is to get the corn going into the silos before there is frost.

The unfavorable weather undoubtedly has stepped up barn feeding and costs, but a heavy crop of hay in most places will help. Much second cutting hay was rained on repeatedly and some apparently will not be cut.

Top Award for Peaches

One of the awards not on the official schedule at the State Fair was that of Duncan Memorial Fund. This fund was subscribed and named for H. S. Duncan following his death in 1937. He was the organizer and first head of the State Farm Produce Inspection Service. His hobby beyond his official duties was education in better marketing of fruits and vegetables.

For several years the fund made awards to growers who were doing good jobs of marketing "as H. S. Duncan would have seen it." This year the fund voted to award a certificate and \$200 to the exhibit in the Horticultural building which (a) does the best promotional job for New York fruits and/or vegetables; (b) has the most sales appeal for consumers."

The award committee unanimously voted the award to the exhibit of the New York State Peach Growers Association, which it described as "mouth-watering; having the most eye appeal; complete." It was prepared for the peach association of which Donald Nesbit of Albion is president, by Jack Heinicke of Geneva. It included fresh fruit of four varieties: peaches canned, frozen, made into jellies, marmalades,

preserves, conserves, and various desserts. They also approved the recipe folder that was handed out.

The committee reported that the exhibit of the Rochester Area Vegetable Growers Association stood next in order for the purposes of the award. In addition to displays of vegetables it featured a large salad bowl and relish tray with samples for visitors. Honorable mention was given to the Potato Seed Growers Cooperative, Onondaga Vegetable Growers, Finger Lakes Grape Growers, and the New York State Cherry Growers Association.

New Milk Formula Studied

Considerable study is being given to the operation of the new Class 1 price formula in the New York metropolitan milk market order. The automatic pricing became effective on August milk, and producers are receiving checks slightly higher than the price estimated earlier. The forecast for the September price also is higher than estimates made in midsummer.

Operation of the formula is of interest because some dairy leaders in the Rochester and Buffalo markets think the time will come when those markets should have formula pricing under the state orders. Neither market has had a pricing formula for several years.

Available from all "Tydol-Vee-dol" dealers in American Agriculturist territory is a 32-page booklet containing a calendar to December 31, 1951. In this booklet there is much information that the average motorist will appreciate; also, a form for keeping a record of mileage, expenses, fuel consumption, etc. This is a brand-new publication of the TIDE WATER ASSOCIATED OIL COMPANY.

From the DUPONT COMPANY, Wilmington, Delaware, comes news that a company at Elmsford, New York, has developed a method of seeding grass along roadsides and in parks by spraying on a mixture of water, seed, and fertilizer. A 600-gallon tank contains a solution with 300 pounds of grass seed and 600 pounds of commercial fertilizer. The mixture is continually stirred, and a tankful per acre is applied through a fire hose.

Whenever you buy a hundred pound bag of any PURINA chow for laying hens, you can get a coupon worth 25 cents on a Purina poultry feeder. When you have 5 coupons plus \$1.35, you can get a feeder for about one-half the usual price. This offer lasts only until October 31 and it is good in the continental U. S.

Interest in irrigation is increasing rapidly. If you are one of those who is considering installation of an irrigation system, you will find a number of advertisers on pages 10 and 11 of the August 19 issue, any or all of whom will be glad to send you booklets and information, or answer your questions.

THE NEW HOLLAND MACHINE COMPANY, New Holland, Pa., has developed a new one-man wire baler designed especially for farmers who want heavier bales. It is known as Model 80. It can be drawn by any two-plow tractor, and the New Holland 14 1/2 gauge wire makes twists which withstand a pull up to 285 pounds.

A postcard to KNOX STOVE WORKS, INC., 2011 Ailor Ave., Knoxville, Tenn., will bring you an illustrated folder giving complete information about the Mealmaster oil-electric combination kitchen range.

The Agricultural Research Department of SWIFT & COMPANY, Union Stock Yards, Chicago 9, Ill., has a 16-mm sound film entitled "A Nation's Meat." This is ideally suited for meetings of Future Farmers, 4-H Club groups—in fact, any farm group interested in livestock. It shows the production of meat from the western range to the kitchen range. All you pay for the privilege of showing it is the transportation charge one way. Write to Swift & Company if you are interested.

Here is an excellent tool for a repair shop. Characterized as the only complete bench machine for sharpening and fitting circular saws, it is manufactured by the BELSAW MACHINERY COMPANY, 315 Westport Road, Kansas City 2, Mo.

From the Editor's MAILBAG

Readers Free Minds About Big Trucks

Let Cars Pass!

YOUR editorial on trucks was one of the best and most pertinent I have read in a long time. The injustice to the farmer and the railroads is only too obvious. Even the city motorist is the victim of the low share of highway maintenance costs which the heavy truck bears. Here are my suggestions:

(1) Increase by many times the tax on large trucks; (2) Reduce the tax on small trucks; (3) Allocate part of the funds collected to enforce law on big trucks; (4) Make it mandatory that a truck which is not capable of maintaining a speed of 50 miles an hour on a two-lane highway turn off the road when more than five cars are being held up by it, so that they can pass.

Keep hammering on the truck problem!—Robert R. Livingston, Germantown, New York.

The Other Side

FOR many years I have been a reader of your *American Agriculturist* and have appreciated the fair attitude you have taken on most subjects, especially those regarding farmers' problems.

However, in your September 2 issue on the editorial page you published an editorial which I am sure you have not considered or thought through fully. It so happens that along with farming I operate two refrigerated trucks.

You state that trucks can carry almost 32 tons, leaving the impression that we have that much pay load, when in reality this is the picture: My trucks, empty, weigh between 27,000 and 30,000 pounds, which means I can carry between 33,000 and 36,000 pound pay loads. These days a great many farmers' cash crops, such as dairy products, are being moved on the type of truck I have. The railroad can neither give the service nor the refrigeration necessary. Our charges are somewhat higher than rail, which should be sufficient proof to bear me out on this point.

You mentioned the difficulty in your area about trucks getting out of control on hills. I'm sure if you would check into the majority of these accidents, you would find they are caused because the tractor or truck involved is much too small for the job. Owners, trying to operate in the black, buy lighter trucks to raise their revenue, but also raise the accident rate and bring censure on trucks in general. To drop the weight level downward will only increase this trend. Larger tractors also carry larger tires to dis-

tribute the load more evenly.

I do not know where you obtained your figures on tax per mile, but I find I cannot begin to operate on the figure you mention. Each of my trucks costs in excess of \$200, where you mention \$140. The average truck consumes about a gallon of fuel every 4 miles—approximately 40,000 miles per tire on 14 tires per vehicle, which brings your tax up considerably—plus a dozen other taxes.

Finally, you take up the torch for railroads when the thing that is putting them out of business is not trucks, but excessive costs of labor, materials and management. I don't profess to know the answer, but I do say trucks should not be blamed for their plight. Railroads do at least have this in their favor: the government regulates them in interstate commerce. What they can haul in California, they can also haul in Maine, whereas trucks have a problem at every state line they cross.

I certainly oppose overloading of trucks and am in favor of stiff penalties for this practice, but let's be fair and give them an even break. They, too, can make a living!

—Frederick L. Gohlla, Warsaw, N. Y.

Heavy Damage to Roads

I'M sure you voiced the general consensus of opinion of us western New York farmers in your editorial about heavy truck damage to our roads.

Here we are particularly sensitive to their ravages, as our 2-lane "U.S. 20" on which I live, and "N. Y. 5" are the only through roads to handle East-West traffic. Consequently, passenger car traffic is governed by them, due to two-lane traffic and their traveling extremely slow up hills. —Vincent P. Aldrich, Fredonia, N. Y.

Back Roads Need Improving

CONGRATULATIONS on your "facing the facts" editorial entitled, "Heavy Trucks, Roads and Taxes!" For a long time I have been one of those who felt that this situation should be brought out in the open.

While a high proportion of the public highways of Herkimer County have a hard surface, getting out in the winter with regularity is still a problem on probably two thirds of the farms of the county. It doesn't appear that there has been sufficient funds to widen the highways, eliminate the brush, cut the banks and do other things that would make it relatively easy to free the roads from snow. It seems unfair that these people should have to pay the high license fees compared with what the big trucks are paying. Also, needless to say, my attitude toward the big trucks has not been improved by drivers who bully their way down the middle of the road.—J. Joseph Brown, County Agricultural Agent, Herkimer County, N. Y.

Keep Box Cars on Tracks

I READ your article on "Heavy Trucks, Roads and Taxes." Perhaps trucks are important to the public and the farmer, but I ask you, do we need box cars on the road? The railroads have always done a fairly good job of hauling box cars, so why not let them do the heavy hauling and worry about their own road which they must build and keep in repair? —A. E. Olson, Machias, N. Y.

Fall Poultry Feeding Questions

By L. E. Weaver

When should laying mash take the place of growing mash for pullets?

By the time they have reached a production rate of 25 per cent or sooner. One is tempted to say that it doesn't matter much. One man tells you he makes the change as soon as he finds the first pullet egg, and that his pullets do well. Another tells about never making the change at all. He just continues to feed growing mash, and his pullets do all right. If all growing mash were as well fortified with vitamins and other required nutrients as those designed for indoor rearing, there would be little necessity for changing to a laying ration, but not all of them are. Better play safe by making the change soon after laying begins.

For the most part, laying mash is made of the same things as growing mash—ground corn, wheat, oats and their by-products, plus protein materials, minerals and vitamin carriers. For indoor feeding, larger amounts of some of the vitamins are needed in the mash. Egg-making likewise makes additional demands which laying mash is designed to supply. In all mash, however, considerably more than the known required amounts are put in, just to be on the safe side. I suspect it is those extras that make growing mash into fairly satisfactory laying mash.

Should free choice feeding of grain be continued after the pullets start laying?

Yes. Many poultry keepers have found free-choice feeding of both grain and mash so convenient, and egg production so satisfactory, that they have not changed to restricted or controlled grain feeding at all. However, most

laying mash is made to be fed with not more than an equal amount of scratch grain. Regulated feeding of grain may be necessary to hold approximately this 50-50 balance.

Should oats be fed to laying pullets?

Yes. Oats do seem to help prevent feather pulling, possibly cannibalism. As a source of actual nutrients, oats are usually more highly priced than corn or wheat. A good scratch grain mixture is 200 pounds corn, 200 pounds wheat, 100 pounds oats of good weight.

How about feeding whole corn instead of cracked corn?

An excellent idea, but only if the pullets have been fed whole corn on range long enough that they are used to it and are eating it readily. To make an abrupt change from cracked corn to whole corn might throw laying pullets into a fall molt, if the total amount of feed eaten each day was reduced.

When should the feeding of crushed oyster shells be started?

At least a month before the pullets begin laying. Of course there are several other materials that supply shell-building material. For example, lime, crushed limestone and coquina shells.

When should lights be started?

If the pullets are laying and you have not started lighting them, do so at once. Good daylight lasts no more than 12 hours at the present time, and some pullets need at least 13 hours.

September 15 was none too early to have started lighting your pullets if they were laying or mature enough to start laying. There is no reason for starting lights on immature pullets. Wait until they are about 5 months old.

Let's Sell More Northeastern Eggs

(Continued from Page 1)

same with the dirties. The mediums bring you 60c a dozen.

Now, if you want to take the trouble to figure it out, I think you'll find that you would realize a total of \$22.79 at retail for the case you bought for \$20.10. This leaves you an unattractive profit of \$1.69 for hauling a case of eggs from the wholesale market to your store, for candling and sorting the eggs and for retailing them. You don't like the deal and I don't blame you.

Your Competitor

Now, let's walk across the street and see how your competitor made out with the case of Minnesotas he bought.

He has decided to charge only 72c a dozen for the Grade A and AA eggs he got out of that case. That gives him a 12c a dozen price advantage over you to attract customers. Maybe the eggs in his Grade A cartons are not quite as fresh as yours, but they're good eggs. Most customers would have difficulty telling the difference. He would also sell the Grade B's for 60c a dozen.

Now, figure up what he got for the case of Minnesotas which cost him \$17.10, and you'll find it amounts to \$21.26. This leaves him a retail margin of \$4.16 and this is quite satisfactory. And besides that he's a tough competitor. Would you take a look at some Minnesotas when you went down to the wholesale market to buy eggs next time? I think you would!

Our Problem

We haven't got a monopoly in our Northeastern markets. As eggs get more plentiful, as they were last spring, buyers shop around for the best value. That's when the wholesale prices of Midwesterns and Nearbys get pretty close together instead of the 10c spread we find in some grades now. That's when prices are low and we really need a few more cents per dozen. But we have to put something into each case

of eggs which makes them worth the extra premium. The buyer has to get the extra cost back or he's not going to pay that premium. He didn't last spring and he never did when there were enough eggs so that he could shop around.

We can't let down for a moment on interior quality. In fact, some of our Nearby producers will have to improve. We found as high as 205 AA grade eggs in one of the 25 cases but there was another in which we found none. We found no B's and no C's in the best case but the poorest case had 81 grade B eggs and 25 grade C. A lot has been said about cool egg rooms, quick cooling, etc., to maintain fresh interior quality. It has to be said some more, and the advice has to be heeded by our Northeastern producers if they expect to get top prices.

Not so much has been said about cutting down on cracked eggs. This is mostly a farm problem. We examined most of the 25 cases on the farm and then again at the country receiving station (the figures used above were from the report at the receiving station). There was very little increase in the number of cracked eggs between the farm and the station.

Appearance is still a great salesman. Undersized eggs in any grade hurt their sales appeal. Noticeable dirt or stains are even worse. Chocolate brown and buffs in the same layer seem to cause the buyer to react by saying, "This case doesn't look good and so it can't be good." Where tints and creams are all put into one layer—not the top one—it doesn't hurt so much. And with brown eggs, it doesn't take a great deal of sorting to avoid the real mottled appearance of eggs from individual layers.

These things sound like a lot of fussing to some poultrymen, but I'd like to end up where I started. As the margin is squeezed down in egg production, producers must put more emphasis on selling.

STARTED CAPONS

Remember that 60c a pound live weight that Capons brought last Easter? We say again and again—you will never go wrong with Capons. They bring highest premium prices year in and year out. Buy them now for that special Easter market next spring. We have them 4 and 6 weeks of age in the popular breeds—ready for immediate delivery and priced low so you can make a real profit on them.

STARTED PULLETS

BABCOCK'S HEALTHY CHICKS

MAKE GREAT LAYERS

Our White Leghorns are making high records in 1950 laying tests. In 1948-49 official egg laying tests, our Leghorns won as follows: 1. High White Leghorn Pen All Tests. 2. High Pen all breeds in profit class at California. 3. High Leghorn Pen at Pennsylvania, Western New York and Georgia. 4. High Four Pens all breeds at Pennsylvania. 5. Poultry Tribune Trophy (273.50 eggs and 287.9 points per bird). We still hold All-Time World Record for one pen.

WE HATCH THE YEAR 'ROUND
White Leghorns, Red-Rock Cross, Rhode Island Reds and Barred Rocks... own two hatcheries with 530,000 egg capacity, three poultry farms and 15,000 breeders. We carry on a complete pedigree-progeny testing program.

Crankcase Moisture a Winter Hazard

By EDWARD MONROE

THE condensation of moisture within the crankcase of a tractor with its resultant formation of ice, slush, and sludge is a danger which should not be overlooked by farmers who use their tractors only for a short time each day (such as drawing manure) during the winter months.

If a considerable amount of water is allowed to accumulate within the crankcase, it will lead to the formation of sludge, which, in itself, is objectionable, but the most immediate danger results whether the moisture freezes or not. If freezing temperatures are reached within the crankcase, ice and slush will form, which may plug oil lines and strainers, causing burned out bearings. If it freezes in the oil pump itself, it may cause breakage of the pump or gears driving it, when the engine is started. A few minutes of running on a cold morning may result in burned out bearings and serious damage to the motor, if the ice has formed in the crankcase.

Short Runs Dangerous

Assuming there's no leakage from the cooling system, moisture is always forming within the crankcase, due to the changing temperatures. If the tractor is operated for a considerable period of time during the day, so that the oil is thoroughly warmed for some time, the moisture will evaporate and escape through the crankcase breather. Short runs do not heat the oil sufficiently to evaporate this moisture, so it continues to accumulate.

Some makes of tractors are more susceptible to excessive accumulation of moisture than others. Those having deep crankcases are among the worst offenders, as the oil remains cooler and, consequently, there is less evaporation of moisture. Don't condemn a tractor for having a deep crankcase, however, as your oil will stand up better in summer for the same reason.

These precautions can be taken to prevent damage where the tractor is used only for short periods:

1. Use a good thermostat which will keep the motor at about 175° F. to 180°

F. Use a winter front in very cold weather.

2. After the motor has been stopped for about ten minutes, remove the drain plug and catch about a teacupful in a large water glass. If there is water in the oil, it will be in the bottom of the glass and the oil on top. Do this every three or four days if necessary.

3. Special coverings may be purchased for the crankcase which will insulate the crankcase and cause the oil to run at a higher temperature and to reach this temperature more quickly.

4. Change the oil oftener in winter, but make the change when the oil in the crankcase is thoroughly heated so that the water will come out with the oil.

— A.A. —

LUBRICATING SAW

This way of keeping a saw lubricated is suggested by American Builder, magazine of the building industry:

box, run hot paraffin down through the saw cuts on box," the publication says. "When the paraffin becomes cold, draw the saw that is being used through the cuts. This method will lubricate the saw as long as the box can be used."

— A.A. —

MEASURE SHADOW TO MEASURE BUILDING

Here's an easy way to measure the height of a building without climbing on the roof:

Drive a pole into the ground where it will be fully exposed to sunlight. Make sure the pole is vertical. When the shadow cast by the pole is equal to the pole's height, measure the length of the shadow cast by the building. This will equal the building's height.

This 16x48 concrete silo is going up on the farm of Lee Sweetland of Dryden, New York. Work is being done by Eastman Brothers of Ellisburg, New York.

This type of silo is fairly common in Jefferson County and other northern New York areas, but up to now has not been used much in central New York. Ordinarily 8 feet of silo is made in a day, and by the following morning it is set sufficiently so that the forms can be raised and another 8 feet added.

DOES WHAT NO OTHER GASOLINE EVER DID BEFORE

KEEPS RUST OUT...
as it
PUTS SUPER-POWER IN

New Sinclair Gasoline gives you new, SUPER-POWER for your tractor, truck and car — new fast starting, new high anti-knock, new economy.

This Super Sinclair Gasoline also keeps rust out of your gas tank (rust formed by moisture condensation). Miracle Sinclair rust inhibitor, RD-119, now in all Sinclair gasolines, stops rust formation that costs you valuable time, that costs you money in repairs by clogging strainers, fuel pump and carburetor jets.

Phone your Sinclair Representative today for new, SUPER-POWER Anti-Rust Sinclair H-C or Sinclair Ethyl Gasoline.

NEW Super-Power ANTI-RUST
SINCLAIR
GASOLINE WITH RD-119

SINCLAIR Diesel Fuel, Heating Oils, and Kerosene also contain RD-119 anti-rust.

WRAPON CABLE
No Frozen Pipes
Enjoy year round running water—trouble free. For trailer park, warehouse, cottage, garage, stock and poultry farm, pumps, oil lines. Thousands of happy users. Easily installed—see cut. Six cable sizes from \$1 up. Also insulation and thermostats. Get free circular & instructions. **GRO-QUICK, 330 W. Huron, Chicago 13**

DOUBLE harness for draft horses. New, used only two winters. William W. Rowland, Southbury, Conn. Tel. Woodbury 6143.

By J. F. "Doc" ROBERTS

I AM ON a trip up through northern New York State and across the Adirondacks into New England. It is taking about two weeks, as I am looking for feeding cattle, attending livestock auctions, county fairs, and the Eastern States Exposition at Springfield, Massachusetts.

I have seen green grass everywhere, with an abundance of fall feed. Most sections have "hay enough to see us through" even though most of it is not too good. Corn is backward with a great deal of it that looks as if it will not mature but has growth enough to give us a lot of silage. In all sections I saw some farmers cutting silage corn, but not many.

The cattle situation may be as I have seen it or it may not. Anyway, it looks to me as if the talked-about heavy fall runs of livestock will just not show up this year. Prices have been high for almost a year now, and surplus livestock of all kinds has been marketed. I have seen many pastures without livestock and talked with many men who just haven't anything they want to sell this fall. If my observations are a true picture of our livestock situation in the Northeast, there will be no surplus at any time within the next year at least.

Better Marketing

In northern New York a better job of marketing is being done than I have ever seen before. They are beginning to concentrate their livestock largely through Empire Livestock Marketing Agencies. This is making it possible to interest more buyers from greater distances, and their prices now compare favorably with any other section of the state.

Larger markets and fewer markets are definitely on their way. There is every reason why this should be: Costs of marketing can be lowered to farmers; buyers can get their requirements with less expense in time and handling costs, and greater numbers offer a better selection to different buyers wanting different kinds and types. This in turn offers a more stable outlet for any kind or type of livestock any farmer may want to sell. Size of market is going to continue to receive more and more attention from buyers and sellers alike.

No Hysteria

As you get further and further away from big cities and centers of populations, confidence in America and its future begins to return. People here are still living with the true values of their home and their community. Their homes show it, as you drive by, and they show it as they go about their tasks or pleasures, and as you talk with them. They are not afraid of Russia or the atomic bomb; they are in-

terested in politics and economics and are ready to admit failures and blunders, but they have not lost confidence in their neighbors or their neighbor's neighbors, which means they have not lost confidence in our government or our way of life.

The real power of America and its future still lies with these folks in their small communities, towns, and cities. A two-thousand-mile trip away from our big cities and through these innumerable work centers, spotted as they are in every valley and on every hillside, is not only reassuring but soul-satisfying. Try it!

— A. A. —

GRANT HITCHINGS

(Continued from Page 6)

books. Early in my farming career I discovered that I wasn't making much money from the cows, but I was making money from apples; therefore, I sold my cows and concentrated on the apples. I figured that I could cut the grass and leave it on the ground under the trees. I couldn't see any reason why it would improve the hay any to run it through a herd of cows."

Mr. and Mrs. Hitchings are blessed with 44 descendants, including 3 sons who help operate the orchard of 15,000 trees.

"How many of those 44 are grandchildren?" I asked.

"At the last count, 12," he replied. "It is a little hard to keep track because we seem to be getting regular additions."

As those of you who know him realize, Grant Hitchings is one of the most enthusiastic and optimistic men in the country. It is a pleasure to talk with him, and any young fellow who is discouraged would certainly profit from an opportunity to listen to his philosophy.

100 REGISTERED HOLSTEIN CATTLE

"Windgall? Use ABSORBINE"

says *Gustave Troutman, of Milton, N.Y.*

"I've been a farmer for 40 years and all that time I've used Absorbine for my horses. I've found it quickly relieves strain and soreness from windgall."

Yes, farmers know there's nothing like Absorbine for helping to relieve lameness due to windgall, sore shoulder, fresh bog spavin and similar congestive troubles. Not a "cure-all," Absorbine is a time-proved help . . . used by many leading veterinarians, too, for helping to relieve puffs, strains and bruises.

A stand-by for 50 years, Absorbine will not blister or remove hair. Only \$2.50 for a long-lasting bottle at all druggists.

Food Allergies Can Cause Trouble

By KATHLEEN BERRESFORD,
Nutritionist

ONE OF my friends was complaining the other day about her eyes. They smarted and she thought something must be in the air this time of year that bothered her. After we had talked for a few minutes, she also mentioned that she was suffering from hives. This made me think right away that she must have eaten something she was sensitive to.

Food can cause some very queer troubles if you happen to be an allergic person. In my friend's case, she had ripe tomatoes in her garden and they were so good that she had been eating them twice a day. When she stopped eating the tomatoes for a few days, her hives disappeared and her eyes were all right again.

Milk, wheat, and eggs are known to affect allergic people more than other foods, although almost any food can cause trouble. But allergic symptoms appearing in the summer, if not caused by hay fever, are most apt to be from eating some vegetable or fruit, such as strawberries, corn, peaches, string beans, peas, or tomatoes.

Find the Trouble-makers

In babies, the trouble we hear most about is eczema, a breaking out of the skin, which is very often caused by sensitivity to cow's milk. Coughing, bronchial asthma, hives, irritated eyes, runny nose, and indigestion may also be brought on by food allergy. Not all allergic people are sensitive to foods. They might be bothered by house dust, feathers, animals, pollen or molds.

Allergic persons are affected differently by different foods, too. One food may cause a number of different symptoms, such as hives in one person or asthma in another. Sometimes it takes a lot of detective work to find out whether a food is a troublemaker.

Allergy seems to run in families. Take my friend who had the hives. Maybe her mother and father were not affected, but her uncle might have had hay fever, or her grandmother might have had asthma. This is why the doctor always asks about the family history. Trouble can start at any age, al-

though it is more common in younger people and they tend to outgrow it.

Some people who have never been afflicted think it's all imagination. Perhaps it is sometimes, but when it's not, it is usually possible to prove it, and it can even cause very serious trouble. Aside from the tendency of allergy to run in families, the cause is not known. It does seem to be true, though, that cold weather, nervousness, and emotional strain will bring it on, or make symptoms worse.

Don't Eat It!

There is no satisfactory treatment to prevent food sensitivity, as there is for some other types of allergy. The best method we know of is not to eat the particular food. Skin tests for sensitivity to foods are used by doctors sometimes, but these can not be relied upon to be accurate. The usual method is by trial eating. For instance, if you have some idea what food might be causing trouble, you do not eat that food for a week, and see whether symptoms disappear. If the trouble continues, you leave some other food out for a week, and so on until you find the offender.

If several foods are causing trouble, as sometimes happens, it may be necessary to try eating just two foods for several days—the same foods at each meal, such as toast and tea, or potatoes and milk. If symptoms clear up, you start adding other foods, one at a time every two days. As soon as your trouble returns, the blame can probably be placed on the last food added. As a check, you can then leave the food out and try it again several times more. If it is an important food, your doctor will suggest other foods in place of it.

Any food or beverage, except white sugar, may be a troublemaker. In the case of a meat, you might be able to eat beef, but not lamb; or with cereal or bread, rye might be tolerated, but not wheat. If a food causes severe illness, leave it out of the diet in every form. Or if symptoms are mild, try eating it less often, or cooked instead of raw.

It's New and "Sew" Easy!

WE'RE HAPPY to announce a brand new "miracle transfer" which has been originated by our pattern service. By this method you can print beautiful designs in a few seconds with a hot iron on all materials—aprons, slips, dresses, towels, children's play togs, sunsuits, T shirts. There's nothing to sew or embroider. You just iron on the designs, and they're permanent, wash-proof, and fade-proof.

We're starting off this new service with Tommy, the two-gun Sheriff, at the right. He's three inches tall, dressed in bright red, blue and black. He's as cute as can be, and you just iron him on to Johnnie's sweat shirts, overalls, play suits, and pajamas. Little girls like him, too. There are 18 of these diminutive figures in the pattern.

To order, send 25 cents in coin for Transfer Pattern No. 104 to Carol Curtis, AMERICAN AGRICULTURIST, Box 229, Madison Square Station, New York 10, N. Y. Be sure to write your name, address and pattern number plainly.

Fairgoers See One-Act Plays

THERE'S hardly a four-corners in the United States where a home talent "show" hasn't been put on to raise money for a good cause, or to get out the attendance to a farm meeting—or just for the fun of neighbors working together. The popularity of this type of community activity was one of the two reasons why this year's New York State Fair revived the Country Theater of 1918-22, which under the direction of Professor A. M. Drummond of Cornell University was so popular that its "Standing Room Only" sign was continually in evidence. The other reason was to answer a growing demand for some other type of entertainment than that provided by the midway shows.

The Fair's little theatre had a lot of problems to start with, but its director, Herbert L. Smith of Syracuse, N. Y., assisted by Mrs. Smith, and Professor Drummond as special adviser, managed to solve all of them. Seven community theater groups from the towns of Elmira, Ilion, Kingston, Little Falls, Liverpool, Utica and Watertown, N. Y., took turns putting on plays which they had already performed in their own communities.

Simple and Successful

In addition to enjoying the productions, staged in the auditorium of the Women's Building, Fairgoers had an opportunity to see how to put on a successful play without a lot of expensive "props." Everything was done as simply as possible. There was even a play without a stage—the players performing in the middle of the auditorium, with the audience in a circle around them.

Daily demonstrations of stage make-up were given by Mrs. Smith, and there was a theater exhibit full of helps for amateur dramatic groups. One-act plays were on sale there, including *American Agriculturist* plays, the New York State Plays, and a new collection of the latter, *MORE UPSTATE NEW YORK PLAYS*. (This collection, edited by A. M. Drummond and E. L. Kamarck, contains 7 excellent plays, at the bargain price of \$1.50, and can be purchased from the publisher, Cayuga Press, Ithaca, N. Y.)

It's ten years ago since *American Agriculturist* began to do something about subscribers' requests for plays that were "suitable for rural and small town groups, easy to produce, and inexpensive." Through playwriting contests conducted in cooperation with the New York State Play Project, *American Agriculturist* secured its present popular one-act plays. They are 35 cents each, and royalty free.

Home Bureau Comedy

One of the best *American Agriculturist* plays, *WHAT MEN THINK OF THE HOME BUREAU*, fills a long-felt need for an amusing play for the Home Bureau type of organization. It is played by 6 women, three of them impersonating men.

Another amusing new play on the list is *THE NEW HIRED HAND*. It's an uproarious case of mistaken identity ending in a love match. There's also a good Christmas play, *CHRISTMAS ON THE FARM*, a comedy with Christmas heartthrobs.

For a complete list of *American Agriculturist* plays and the New York State Plays, send a three cent stamp to *AMERICAN AGRICULTURIST*, Play Dept., Box 367, Ithaca, N. Y.

—A.A.— —Mabel Hebel

In planning family meals, remember that youngsters need protein to grow, and adults need protein to keep up their body muscles and stay healthy.

Dairymen's League Launches Drive to Sell More Milk and Milk Products

Sell more milk and milk products! Sell the health value of milk so that the consumer will willingly pay the price! And sell brand-name milk so that the dairy farmer will own his markets.

That advice has been given over and over again by dairy leaders. The only question has been: Who will do the necessary advertising and selling? And who will foot the bill?

League Advertising to Mass Market in New York City

Now, with typical resolution and drive, the Dairymen's League has made a practical start. It is advertising through a mass medium in the world's largest market, and it is following up this advertising with personal sales calls on stores and with point-of-sale displays to consumers.

Beginning August 26, the League launched a big-show television campaign in New York City aimed at consumers who buy milk from stores served by League trucks. The advertising stresses the particular merits of Dairylea milk and of Dairylea milk products.

Up-State Branches Advertise Regularly

Of course, this is not the first advertising that the League has done in any of its markets. It has advertised previously to wholesale customers in New York City. And League branches up-state have used and are continuing to use newspapers, radio, billboards, direct mail, store cards and similar media to sell the merits of Dairylea milk and products. More recently, television has been added and with gratifying results.

Strong Sales-Aids Help

Just this year the League introduced a new "4-Pint Pak" designed to sell consumers four pints of ice cream at one time. At the State Fair, the League exhibited a new ice cream machine which mixes and packs the cream in individual servings for immediate consumption at stores and fountains. Small wheels of cheese, water glasses packed with cottage cheese and other devices are used regularly to up the total sales and consumption.

The League also contributes to the ADA campaigns which promote the consumption of milk. It realizes that every quart of milk sold in any form helps to stabilize the market, but it saves its biggest punch for the sale of Dairylea milk, especially in the classifications that yield the greatest return.

DAIRYMEN'S LEAGUE

Cooperative

ASSOCIATION, INC.

New Lines for Fall

By MABEL HEBEL

COLOR, fabric and fresh feminine details characterize the all-important look of the new season. Dresses look slimmer, but are designed for easy wear with pleats, tiers, peplums, side drapes. Suits stress the soft touch—rounded hips, decollete neck, a slimmer skirt.

The seven basic fabrics for fall are flannel, velveteen, tartan, tweed, fake fur, wool jersey and corduroy. Also making news are the thin worsteds which are crisp and springy and go for weeks without seeing a wrinkle. Crepe is back again as a basic. Velvet—for binding or collar—is the trim in vogue.

Black and beautiful fabrics such as silk faille, satin, velvet, taffeta, were never better. Second to black in crepe daytime dresses is brown in woody shades. Grays rate high in darker colors; charcoal, oxford and banker's gray. Orange, from terra cotta to coral, is the punctuation color for fall.

For the very slimmest effect, No. 2304 wins on three counts—the full length front panel, the long flattering line of the shawl collar, and smart punctuation of the button trim.

The grand feeling of the shirtwaist is found in No. 2305, and combines with the deft detail of the large wing collar, cuffs and front trickle of buttons. Try in soft crepe with an accent of satin.

No. 2202 is the very newest silhouette—slim, shirred lines animated by a soft side drape. The perfect choice for crepe.

No. 2274 is the figure-molding basic dress you will turn to day in, day out. Wonderful in either

wool or silk, with different jewelry, lingerie touches.

There is nothing like a front-buttoned dress—and No. 2190 features this, along with the flattery of the wider, completely scalloped collar.

What could be more practical for daughter than an ensemble! This one, No. 2204, picks panel treatment as companion detail in the cosy coat and pleated dress.

No. 2572 is a sturdy jumper made to mold the figure. Also note that it's simple to sew! Can't you just see it in one of the exciting new tartan plaids? The tailored blouse comes with it.

Pattern No. 2306 has truly trim and tidy lines, with the waist just darted to fit. This attractive housedress presents no cutting problems either—the front and back are each in one piece.

For school and afterwards, No. 2218 is perfect. Blouse included. Both button down the back.

The modified shoulder line and deeper armhole mark this casual blouse No. 2982 as this season's favorite. You'll wear it again and again in a soft, striped jersey.

No. 2308 is particularly suitworthy, with enough charm to stand alone, too. Notice the box pleat from neck to waist that makes it just different enough, smart enough.

This bolero suit, No. 2275, will prove a genuine wardrobe gem if made in fashionable velveteen and worn with its mandarin collared blouse. Fine in other fabrics, too!

PATTERN SIZES AND REQUIREMENTS

No. 2304—16-20; 36-48; size 18, 4½ yds. 39-in.

No. 2305—10-20; size 16, 4½ yds. 39-in.

No. 2202—12-20; 36-44; size 18, 4½ yds. 39-in.

No. 2274—12-20, 36-48; size 18, 3¾ yds. 39-in. or 2¾ yds. 54-in.

No. 2190—12-20, 36-44; size 18, 4½ yds. 39-in.

No. 2204—1, 2, 3, 4; size 2 dress, 1½ yds. 35-in.; coat, 1¼ yds. 54-in. or 1½ yds. 35-in.

No. 2572—10-20, 36-40; sizes 16 jumper, 2½ yds. 54-in.; blouse, 2 yds. 35- or 39-in.

No. 2306—12-20, 36-44; size 18, 4½ yds. 35-in.; 3½ yds. ruffling.

No. 2218—6-14; size 8 jumper, 1½ yds. 54-in.; blouse, 1½ yds. 39-in.

No. 2982—10-20, 36-40; size 16, 1¾ yds. 54-in.

No. 2308—10-20, 36-40; size 16, 2 yds. 39-in.

Tender, flaky, crisp pastry puts ■ pie in the blue ribbon class.

Baking with New York State Pastry Flour

By ALICE F. HOGANS AND ALICE M. BRIANT

PASTRY flour — milled from wheat grown in New York State—makes excellent baked products, according to studies carried on in the New York State College of Home Economics at Cornell University. In New York State much of the wheat grown is of a class called soft winter wheat which settlers of this country used for their food needs long before the development of the hard wheats grown in the middle western and far western plains.

The excellence of New York State soft wheat or "pastry flour," as it is labeled on the market, is due largely to the quality of the gluten formed when the flour is mixed with water to make dough. The gluten of soft wheat flour is pliable and has a tendency to break easily when stretched. It will withstand extra handling without becoming tough. These qualities of the gluten suit pastry flour to use in all types of baked goods, with the possible exception of yeast bread.

No changes in the standard household recipes are needed for quick breads, muffins, biscuits, and cookies when made with pastry flour. For pastry and cake, however, some adjustments are necessary. The amount of fat required to produce flaky, tender, and crisp pastry or a light and tender cake is less than that recommended in most recipes. Less sugar and liquid are also needed for rich cakes made with pastry flour since one of the reasons for using sugar in cake recipes is to soften the gluten, and the gluten of pastry flour is by nature soft and pliable. Homemakers are advised to use only bleached flour for cake making as unbleached flour will cause a cake to fall.

The following recipes have been developed especially for the use of pastry flour in pastry, cookies, and cakes. As is the case with all recipes these should be followed accurately since the ingredients have been carefully balanced to produce good products.

PASTRY

- 2 cups pastry flour
- 1 teaspoon salt
- ½ cup hydrogenated fat*
- ¼ cup (approximately) ice water

1. Sift the flour and salt into a bowl.
2. Cut in the fat with a pastry blender until the fat is about the size of large peas (about 20 strokes).
3. Add the ice water and stir with a fork until the dough cleans the sides of the bowl (about 30 strokes).
4. Divide the dough into two portions and shape each into a ball.
5. Roll pastry on lightly floured board

(*A shortening such as Crisco, Spry, or Swiftning.)

with lightly floured rolling pin.

6. Bake in a hot oven (425° F.) for 12 minutes. Makes one double or two single crust pies.

ONE EGG CAKE

- 2 cups pastry flour
- 1 cup granulated sugar
- 2 teaspoons of double-acting baking powder
- 2 teaspoons salt
- ¼ cup plus 2 tablespoons hydrogenated fat*
- ¾ cup milk
- 1 egg, slightly beaten
- 1 teaspoon vanilla

1. Sift all the dry ingredients into the large bowl of the electric mixer.
2. Add the fat and ½ cup of milk and mix at medium speed for one minute.
3. Scrape the batter from the beaters and sides and bottom of the bowl and then add ¼ cup of milk, the slightly beaten egg and the vanilla.
4. Mix at medium speed for an additional minute.
5. Pour the batter into a greased cake pan, 9x9x2, and bake in moderate oven (350° F.) for 50 minutes.
6. Cool the cake about 15 minutes before removing from the pan.

TWO EGG CAKE

- 2 cups pastry flour
- 1 cup plus 2 tablespoons sugar
- 2 teaspoons of double-acting baking powder
- 1 teaspoon salt
- ¼ cup plus 2 tablespoons hydrogenated fat*
- ¾ cup milk
- 2 eggs, slightly beaten
- 1 teaspoon vanilla

Follow directions for one egg cake.

BUTTERSCOTCH COOKIES

- ¾ cup hydrogenated fat*
- 1 cup brown sugar
- 1 egg, slightly beaten
- ½ teaspoon vanilla
- 2 cups pastry flour
- 1½ teaspoons double-acting baking powder
- ½ teaspoon salt

1. Cream the fat and brown sugar until light and fluffy.
2. Add the slightly beaten egg and vanilla and mix thoroughly.
3. Add the flour, baking powder and salt and mix until well blended.
4. Make the dough into a roll, chill and cut as for icebox cookies, or put through a cookie press.
5. Bake the cookies on a cookie sheet in a hot oven (425° F.) for 6 minutes. Makes about 4 dozen cookies.

ALMOND SUGAR COOKIES

- ¾ cup hydrogenated fat*
- 1 cup granulated sugar
- 1 egg, slightly beaten
- 1 teaspoon vanilla
- 1 teaspoon almond flavoring
- 2 cups pastry flour
- 1½ teaspoons baking powder
- ½ teaspoon salt

Follow directions for butterscotch cookies. Makes about 4 dozen cookies.

NEW! IMPROVED! 3 WAYS BETTER

... say
prize-
winning
cooks!

"Easier to use," says Mrs. Melvin B. Felpel, Ephrata, Pennsylvania, 1950 prize winner at the Pennsylvania Farm Show. "There's no time wasted, no special directions to follow. New Improved Fleischmann's Dry Yeast is easier to use than ever before."

"Dissolves faster," says Mrs. Dominika Serick, New Brunswick, New Jersey, winner of countless prizes at Grange and County Fair contests. "I think it's the speediest yeast ever! You just combine it with water, stir it well and that's all. It's ready to use."

"Rises faster," says Mrs. Alfred A. Niskala, Union, Maine, first prize winner at Knox County Fair. "I've never used ■ yeast that was quicker acting. And New Improved Fleischmann's is more dependable—gives the finest results always."

Yes—America's foremost cooking experts agree —no other yeast can beat New Improved Fleischmann's for speed . . . for convenience! You've never known *any* yeast that's easier to use! It stays active for months when kept cool and dry. It will stay active even longer if you keep it in the refrigerator. When you bake at home, use New Improved Fleischmann's Dry Yeast.

AMERICA'S PRIZE-WINNING COOKS PREFER FLEISCHMANN'S YEAST

WHAT'S GONE BEFORE

The first two chapters of "No Drums," the sixth and best of Mr. Eastman's stories that have appeared in *American Agriculturist*, were published in the issues of September 2 and 16. You can bring yourself up to date with the synopsis given here, but better still, get the back copies and read the complete installments. In any case, don't miss one of the best farm stories ever written.

The story begins at the opening of the Civil War, in April, 1861, in a typical farm neighborhood in southern New York. Mark Wilson, a young farmer living with his parents, George and Nancy Wilson, and five younger brothers and sisters, is in mental conflict about answering Abe Lincoln's call for volunteers and leaving his sweetheart, Ann Clinton, a neighboring farm girl.

At a party to which Mark takes Ann, Henry Bain, well-to-do and unscrupulous, tries with some success to get Ann away from Mark. A fight results, Mark tells Ann what's what, and takes her home.

The men of the neighborhood gather in the evening around the furnace in the old Wilson sap house after a big sap run to discuss the war situation. It is here that Mark suddenly comes to a decision and dramatically announces that he is going to volunteer and leave immediately for the South.

CHAPTER III

AFTER stumbling, half awake, through the chores that Sunday morning, Mark went to bed and slept until his mother called him to dinner. Then he went down the road to call on Ann. He hadn't seen her since the night of the party and wasn't sure what kind of a reception he would get. But when Ann opened the door she kissed him eagerly and drew him into the room where her mother and father were sitting.

Ann's father, Fred Clinton, was a gentle, quiet and friendly man who, whenever he got a few dollars ahead from his small, stony, heavily mortgaged farm, would disappear on a drunk until the money was gone. Mildred Clinton, Ann's mother, was nervous and flighty, inclined to worry and nag. The family lived constantly on the ragged edge of financial insecurity, saved only from actual disaster by Ann, who taught school and helped in the work and management of the farm. No wonder the girl seemed changeable at times. When she wasn't worrying over the family finances, she was embarrassed by her father's drinking, and since her engagement to Mark she often wondered if she was being fair to him. These worries and doubts were reflected in her moods.

Seeing that he would have no chance to talk to Ann alone in the house, Mark asked her to go for a walk with him. She consented, and they started down the road together. Mark was quiet, hesitating about opening the subject on his mind, but presently he said:

"Ann, there's something I want to say to you."

"I think I can guess what it is, Mark," she replied, gently. "You're going to enlist."

"Yes, that's part of it. I feel that I must, sweetheart."

"I know how you feel, Mark. I've been hearing the talk and thinking about it, too. Most everybody seems to think it's the right thing to do."

"Henry Bain doesn't," said Mark.

Ann drew away a little.

"Why bring him into it, Mark? He's nothing to us."

"I'm sorry, Ann. But he seems to keep butting in, and it irritates me."

"Well, forget him," she said, shortly, "and think about us."

"That's just what I want to do. I want to think about us. I want you to marry me, Ann."

She walked along silently for a moment and then looked up at him:

"All right, darling. When?"

"Right away—before I go. Will you?"

Instead of answering his question directly, she asked:

"Mark, have you thought what we would do when you get back? We can't very well live with your folks or mine except for a short time."

"Why, we'd farm it," he said. "That's the only thing I know how to do. We'd make out all right."

"I like to farm, too," Ann agreed, "but it would be tough getting started without any help at all—no stock, no tools. I'll have to help my folks, too, you know, and I don't see how we can do so much."

"We could take a good farm on shares," said Mark.

"Even then," she answered, "you should have a team, tools and some stock."

"Well, let's cross that bridge when we come to it."

"All right," she agreed. "We're both healthy and we both can work."

"What'll your folks say about your getting married?"

"It'll be all right with them. They let me do pretty much what I want to anyway. They've always known you and they like you."

"I want to enlist right away, Ann. When can we be married? It'll be tough on father to get the work done without me, but if I'm going, the sooner the better." Then he stopped and drew her to him.

"Ann—Ann—it's only a little ways now to Jenkstown. Let's keep right on walking till we get to the parsonage and ask Rev. Belden to marry us."

"Now?" she gasped. "In these clothes!"

"Why not? You look just fine. You always do. These are your good clothes, and I've got on mine, the best I own or am likely to own for some time. Even the shirt I have on is patched," he added with a wry grin.

Ann looked up at him, her eyes grew soft and misty and her face flushed. She leaned a little toward him and spoke so softly that he could hardly hear her:

"All right, darling. If you're sure that's what you want."

He clasped her tightly in his arms and for a long moment the world and its works were forgotten. Then they turned and set their steps for the little parsonage and Timothy Belden, the old pastor who had known them both since they were born. But as they neared their destination, their steps grew ever slower until Ann stopped and whispered:

"Mark, I'm scared, just plain scared."

"So am I," admitted Mark, his voice trembling a little, "but let's not stop now."

Still hesitating, Ann said:

"Maybe we ought to have talked this over with our folks. Maybe we should have taken more time to think about it."

But Ann's hesitation and timidity only increased Mark's courage and assurance:

"We've been engaged for a long time, and the folks know all about it. I'm going away and we haven't got much time. So, come on!"

He drew her to him again, whispering huskily:

"It's all right, sweetheart. You know

how I love you, and I always will. And you love me, don't you?"

And on receiving her whispered, "Yes, yes, I do," he took a firm grasp of her arm and they walked on. Waiting on the parsonage steps, however, for the answer to Mark's knock, both again were on the point of turning and running away when Dr. Belden opened the door. He took one look at them and then said:

"Come in! Come in! I haven't had a visit with either of you in a long time."

They followed him into the shabby study. A tall combination desk and bookcase occupied part of one side of the room. The drop cover of the desk was open and so littered with papers that it was apparent no effort was ever made to close it. The walls were lined with homemade cases filled with books. On the right of the desk and extending the length of the little room was a rather ornate sofa, the leather-covered seat cracked and bulging in spots from long use. On the other side of the desk was a big chair which once had matched the old sofa.

Seating Ann in the chair, so big that she was almost lost in it, Dr. Belden waved Mark to the sofa, and taking his place in a rickety fiddle-backed chair in front of the desk, adjusted his steel spectacles on his nose, crinkled his eyes first at Ann and then at Mark, and said:

"Well, my children, what can I do for you?"

Tall, thin, angular, always dressed in his one suit of shiny black, his long face deeply lined, Timothy Belden, Doctor of Divinity, was the best read man in the neighborhood, if not in the county, and the most cheerful. He gave his people a religious philosophy that they could live by, use and practice every day of the week. Now as the young folks looked at his homely, kindly face, some of the tension eased and Mark, swallowing a couple of times, blurted out:

"Dr. Belden, we want to get married."

"So!" said the pastor. "I can't say I'm surprised. I have expected this for some time. When do you plan to have the ceremony?"

Again Mark gulped:

"Now!"

This time Dr. Belden showed his astonishment. He raised his long bushy eyebrows:

"Now I am surprised. Why such a sudden decision?" Then he added gently: "But I think I understand. You're going to war, Mark?"

"That's right, Dr. Belden, and we want to be married before I leave."

The pastor looked down at the Bible on top of the litter of papers on his desk, let his hand drop gently on it as if for guidance, then again looked across at the young people:

"Mark and Ann, so many couples rush into marriage, especially in times of strain and stress like these, without realizing all or even a part of what marriage means. I know, of course, that you two aren't doing that, for you have known one another for years. But let me visit with you for a few moments about what you plan to do."

Mark shifted uneasily, thinking he was going to be told to put off the marriage.

"Young people talk about falling in love," the gentle voice went on, "and of course they always think they are in love, just like you do now. But I often wonder if any young people can really know what they are talking about when they say they are in love. There's a mysterious natural attraction between men and women which may be nothing more than Nature asserting herself through the power of physical attraction between the sexes. That's all right, too, if with it there is at the same time the spiritual love without which no marriage can truly succeed. That's just what the marriage cere-

Pincher Looks Like He Feels

(Continued from Opposite Page)

mony means when it says 'for better, for worse, in sickness and in health.'

"You two are old enough to know something about life's troubles and problems. Mere physical attraction will not stand up in the face of what we all have to go through in this life. Love doesn't reach its highest level until a couple have gone through the fire, have experienced together all things sweet and sour, good and bad, trouble and joy. Then it may truly be said of a man and a woman that they truly love when, because of all their shared experiences, their souls become so close that they are almost a part of one another. Then, when the physical attraction fails, as it will, and the gray hairs and wrinkles come, they can say with the poet Thomas Moore:

It is not while beauty and youth
are thine own
And thine cheek unprofaned by a
tear
That the fervor and faith of a soul
can be known
To which time will but make thee
more dear;
Oh the heart that has truly loved
never forgets
But as truly loves on to the close,
As the sunflower turns on her god,
when he sets,
The same look that she gave when
he rose."

As the minister's words filled the little study, Ann forgot her nervousness, and with inward amusement and understanding Dr. Belden noticed the glowing look she turned on Mark, which he returned in equal measure. He laughed a little:

"I guess my little sermon wasn't needed. The answer as to whether you two have the right kind of love is evident in your eyes now as you look at one another. Ann's shining eyes say more about the holiness and constancy of love than I can ever say.

"But, Mark, are you sure that you are right in marrying Ann now and then going away to war?"

"It will be hard, Dr. Belden," Mark answered, simply, "but easier for me—and I hope for Ann—to know that she is my wife, right here waiting for me when I get back."

"And that's how I feel, too," Ann said eagerly.

"By the way," Dr. Belden continued, "do your parents know that you came here today?"

Ann looked distressed, but Mark answered quickly:

"No, sir, they don't. But they know that I'm going away, and they know that we plan to get married some time, so I don't think they'd mind."

"What do you think, Ann?"

Ann hesitated:

"I guess the folks would be all right, but—" she paused, close to tears—"a girl—kind of likes—to have a real wedding." The last words came out with a rush.

"Of course, she does," said the minister, quickly. He turned to gaze out of the window into the April sunshine. Swinging back suddenly to face them, he exclaimed:

"We'll have a real wedding yet if you'll cooperate. Tell you what we'll do. Tonight is a very special occasion for me and for the church. I've been working for a long time on a sermon that I hope will help my people in this time of trouble. I won't marry you here now, but how would you like to come to the meeting tonight, sit together on the front seat, and at the close of my sermon you come forward and I'll marry you. The church will be full—because everybody is looking for comfort and I've let it be known that I'm making a special effort to give it to them—and your wedding will be a very fitting ceremony and will send them away rejoicing in their hearts, knowing that God is still on his throne and there is still love and happiness in the world. Will you do that?"

Mark hesitated:

"We'd be kind of scared, sir."

"There's nothing to be afraid of. You'll be among your friends. They'll love the ceremony, and they'll love you and will never forget—and you won't, either. There's your real wedding, Ann, with all the fixings. Will you do it?" he repeated.

This time Ann answered for both of them:

"We will!"

"Fine! Now let's have a word of prayer together."

When he had finished, Dr. Belden said:

"Now trot along home, tell your folks what you're going to do, that it's all arranged, and tell them to come to church tonight."

That night when the evening service began, the little church was crowded, just as Dr. Belden had said it would be. Many were there who did not ordinarily attend church. All were looking for peace and comfort, something to cling to in time of trouble. The tall iron woodburning stoves in the rear corners of the church, with stove pipes running along both sides of the church to the chimneys in the front corners took the April chill out of the old building and made a cheerful crackling noise. The colored glass in the long windows glowed in the light of the coal oil lamps that hung in brackets along the sides. The pews were straight, high-backed, and hard, but the congregation was used to them and didn't mind.

In his pulpit chair, while the choir and congregation sang one of the old hymns, Dr. Belden looked into the grave, worn faces of his people and prayed for inspiration and words with which to help them. He had taken as his text the 27th verse of the 14th chapter of John: "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid."

"It may sound strange," he said, "to talk of peace at this time when, as Patrick Henry said, 'We cry Peace, Peace!—but there is no peace.' But this verse doesn't refer to the peace that follows physical conflict. This peace is available to us all, at all times, no matter what conflicts may rage in the world, the peace that is beyond all understanding, the peace that comes from faith, the undying, unconquerable belief that no matter what happens, God is on his throne and that everything will some time come right, whether that some time is here or hereafter. When Jesus spoke of 'my peace' he knew the conflict, the tragedy that lay ahead for him. He knew that Calvary was ahead. But because of his boundless faith, a faith that is available to all of us, Jesus knew that no matter what our troubles or physical suffering, we can acquire a faith that will enable us to go ahead with courage, and to look forward eventually to a peace and happiness that know no bounds."

As Dr. Belden talked in a friendly, conversational tone, just like the old friend that he was and had been to most of them for years, the strained tense look left the faces of his people and they relaxed in the hard seats, while some of the peace of which he spoke entered their souls.

But Mark and Ann, huddled together for courage on the front seat, never could remember a single word of that sermon, and it seemed to them that the preacher would never stop talking. Through both their minds was running the thought, how in the world did we ever get ourselves into a situation like this? They were just plain scared.

But at long last, so it seemed to them, the sermon came to an end. A closing hymn was sung, and then, to the surprise of the congregation, instead of pronouncing the benediction, the minister motioned for them to be seated again. He came forward to stand in front of the pulpit and calling Mark

G.L.F. Annual Meeting Review—6:30 p.m.—October 26

KERNELS, SCREENINGS and CHAFF

HERE AT HAYFIELDS

By Tom Milliman

A MONTH ago this page carried a paragraph called, "Ladino, the Killer." A county agricultural agent wrote me, "At some recent pasture meetings, several people commented on this article and were quite concerned about the use of ladino clover, after reading about such experiences." The county agent goes on to state, "The comment of other dairymen would indicate that it isn't ladino clover but rather the management and the judgment on the part of dairymen that might cause something such as this." At Hayfields, the milking cows are fed either grass silage or dry hay night and morning throughout the grazing season.

A good agronomist of my acquaintance believes that orchard grass growing with ladino makes the pasture safe against bloat. This is on the theory that in a dry year orchard grass keeps producing, while timothy or brome grass will stop growing for a time and provide room for almost pure ladino pasture. There is no doubt that some advantage in orchard over other grasses exists, for yield as well as a bloat preventive. To the extent that orchard grass can be managed on a dairy farm, which means a limited acreage, we favor it at Hayfields over all other pasture grasses. Meanwhile, I'm sorry to be the first to report a death and some "last ditch" cases of bloat among milking cows on ladino-orchard grass.

Right now at moderate sized Hayfields there are 69 acres of ladino-brome-alfalfa, ladino-orchard grass, and ladino-timothy. *The toll from bloat is not enough to stop us from the continued use of ladino clover. The loss of an animal a year, occasionally two, is more than made up by the great yield and high protein of ladino.* Since our luck seems to be unusually bad, perhaps the title should have read, "Ladino—the Killer at Hayfields."

TEMPTATION REMOVED

The decisive vote of growers against the U. S. government potato program in New York State was a landmark. At Hayfields it was followed by my own sense of relief because next winter I won't be tempted with free potatoes for cattle feed. Last winter we had wonderful silage, both grass and corn. Both kinds produced so much good milk that we fed liberally but by the first of March we could see that we were going to run out of silage before pasture arrived. After some hesitation we began to take potatoes through the U. S. government office in Rochester at 10c per 100 lb. bag, loaded on our truck at farmers' potato cellars a few miles to the east of us. The price included a burlap bag upon which a blue stain had been squirted.

These were U. S. No. 1 table stock potatoes, many of them quite large, and at first we were afraid to feed

them whole. In a day or two the cows became accustomed to raw potatoes and we could quit splitting the larger ones with a spade. When the last cow had decided she liked potatoes and would clean up 30 lbs. a day, I suggested we step up the feeding rate to 50 lbs. or more and supply only dry hay for the other roughage. A few cows became hoggish potato eaters and would steal from the cow on either side. It was only these few that seemed to experience any digestive disturbance.

After an absence of 10 days, I returned to Hayfields on a warm April day wearing a tan gabardine topcoat, fresh from the cleaners. The cow tester had just left, leaving the new monthly records entered in the federal D. H. I. A. book. With each of us holding an end of the extremely long, limp book (it takes two people to hold it open properly) Jim and I slowly passed down one row of cows and up the other, discussing each animal in turn. We came to Rosalie, a 5-year-old crossbred that had freshened a month before and was really going to town on production. Unknown to me, Rosalie was one of the potato stealers. She coughed as I stood directly behind her with Jim a little to the right. Instinctively we moved in unison to the right, but not fast enough, and I was completely splattered from white collar to shoes.

After a quick job of scraping clothes, I went away from the stable muttering, *"Old boy, you had it coming. After mostly staying away from price supports on wheat, pea beans, etc., and even refusing free superphosphate, lime and such for many years, you fell for free potatoes, and you deserve to be plastered with runny manure from head to toe."*

VACCINATION WORKS

In September, Hayfields needed a cow. With a completely negative herd, but only cows 6 years and under vaccinated, we didn't dare go to the open market to buy one. Instead we went to good neighbor Harry Newman who has had his calves vaccinated for 10 years. Some 3½ years before, he had bought a heifer calf from us. We bought her back about ready to freshen for the second time, secure in the knowledge that, although Harry doesn't blood-test, his Bang's troubles are over and his herd is safe.

Nine years ago only 1% of New York State herds, with 24,865 calves were vaccinated. Last year 66% or 71-, 946 of the herds of the state were enrolled and 203,054 calves vaccinated during the year. This is a remarkable performance. Any successful and wholly voluntary agricultural campaign, as this one is, didn't just happen. An informed body of dairymen were ready for it after the test-and-slaughter plan for Bang's Disease had failed. The New York State Conference Board of

Showing the orchard-grass-ladino pasture, where among the milking cows one death and seven desperate cases of bloat have occurred in three years. The picture was taken in June, 1949, during a very dry period and doesn't show the good stand of ladino beneath. The cow in the foreground is Rosalie, the potato stealer, taken as a four-year-old. As a five-year-old she weighs 1350 lbs. and is 4/16ths Holstein, 2/16ths Jersey, 1/16th Ayrshire and 9/16ths Guernsey. Her first two records averaged 12,783 lbs. milk, 4.46%, 570 lbs. fat, 2X 305 days, mature equivalent. She is doing well on her third while carrying more flesh than shown above. —Photo by C. Hadley Smith

farm organizations successfully recommended that the Legislature appropriate the modest sum required for veterinarians to vaccinate calves without charge to dairymen. But back of that lay the pioneering work of Dr. Asa Winter of Albany, followed by the organized campaign of the county and state Farm Bureau organizations, county agricultural agents, and the Extension forces generally.

Delaware County organized the first county plan with Ernest Dann of Hamden at the head of it. Then it swept through the state with men like E. S. Foster, Sec'y, N. Y. State Farm Bureau Federation; Dr. E. V. Moore, Assistant Commissioner of Agriculture; and Cy Crowe, Assistant County Agent Leader, driving hard. The key to the whole rapid development has been the dairy committees of the county and state Farm Bureaus. Jacob Pratt, Washington County, N. Y., dairyman and chairman of the New York State Farm Bureau Federation Dairy Committee, was a power-house. Many others helped, including the Veterinary College with research, *American Agriculturist*, milk cooperatives, and neighborhood leaders.

Calfhood vaccination is not merely protection against dreaded Bang's Disease. It has sharp public health significance. Chicago, to illustrate, has announced that, beginning January 1, 1955, no milk will be received except from tested herds completely free from Bang's. Other cities may or may not follow.

Franklin in the North Country was the first county to have 100% of its herds on vaccination. Now six or more counties are in the 100% column. What remains for all of us with vac-

inated herds, is to get busy with our neighbors who haven't got around to it yet, and help make the record just about 100%.

WILL THE ALFALFA BE HURT?

The pasture pinch came about August 20th. In order to hold the superb condition of 28 big heifers and dry cows, we turned them into 11 acres of third crop alfalfa. They went in on August 25th when the alfalfa was about four inches tall. Although they still had access to 20 acres of brome-ladino-alfalfa where they had been before, the dry herd spent much of their time on the alfalfa until they were shut out of it on September 15. All the dry cows and bred heifers held or improved their condition during the 21 days. The few smaller unbred heifers lagged a bit.

Our belief is that maintenance of good flesh on bred cattle is important enough to risk injury to an alfalfa stand in its first year of harvest. During this unusual test, grazing was not close enough to harm the alfalfa crowns, or so it seemed. At this writing, September 22nd, after a week's rest the alfalfa looks fine with frost not expected until October 10, 12, or later. How will it look next spring?

Meanwhile the 28 head of dry stock have 32 acres of brome-ladino-alfalfa. 12 of which were well rested. Even so, with plenty of herbage available, they seem to be gaining more slowly now in late September. It could be that modern pastures, while on the whole much better than bluegrass, especially in mid-summer, do not carry the latter's capacity to put "bloom" on cattle in the fall.

G. L. F.
QUALITY
PASTRY
FLOUR

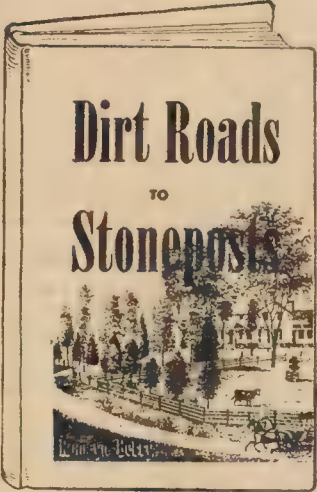

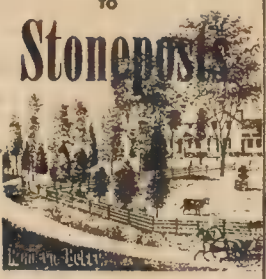

A high-quality enriched flour for home baking, milled by G.L.F. from soft white New York wheat.

Ideal for pie crusts, cookies, short-cakes, plain cakes and other baked goods leavened with baking powder. Use G.L.F. Cake Flour for special cakes like angel food and sponge. Both produce baked goods with the tender, melting crumb desirable in cakes and pastry—are low in price and require a minimum amount of shortening.

Use either for home made cake mixes.

ENJOY NOW
RYM BERRY'S
NEW BOOKS

Rym Berry, whose observations about life on his farm **STONEPOSTS** have often appeared in *American Agriculturist*, greets you with two delightful new books, great for gifts and easy pick-up reading.

STONEPOSTS IN THE SUNSET

Here Rym turns his wit and wisdom to thoughts connected with 'retirement' in the country. "The fine thing about a farm," he writes, "is that you can never completely retire from it. The calling dwindles, but never ends. There's still a garden and a pig or two that lets you keep your hand in — which is perhaps the basis of the lure the land holds for folk whose sun is on the down slope."

Here is a book the old folks will enjoy and a "must" for everyone turning forty. Delightful writing, beautifully printed and bound, only \$2.00 postpaid.

DIRT ROADS TO STONEPOSTS

If your library does not already have this companion volume, parts of which were recently taken by *Reader's Digest*, you are missing a great treat.

Follow Rym as he goes fishing, hoes the garden, and drives the team. You and your family will enjoy your own country living the more as you read these humorous "writin's"; only \$2.00 postpaid.

GET BOTH BOOKS AT REDUCED PRICES

Two books sent to same address for only \$3.50 postpaid; they are identically bound (one yellow, one red) to make a matched gift set.

Century House, Watkins Glen, N. Y.
Enclosed (check or money order) is for:

☐ Dirt Roads to Stoneposts @ \$2.00

☐ Stoneposts in The Sunset @ \$2.00

☐ Both Books for \$3.50 postpaid

OUT OF BUSINESS

A lady in our neighborhood was sent a blue sheet of paper with three certificates to sell at \$1.42 each. She then sent the \$4.26 to the LaBelle Hosiery Co., Hartford, Conn., and got three pairs of nylon stockings. In turn, the three people who bought from her got a blue sheet and each tried her luck at selling. If the purchaser didn't sell any certificates, she could still send the blue sheet to the company and get a pair of nylons. That is what I did, but my letter was returned by the Post Office marked "Out of Business." How can I get my \$1.42 back?

On checking, we found that this company is in the process of going out of business. However, they are making an effort at the present time to settle all outstanding contracts. We are told that claims should be directed to Attorney Robert K. Killian, 50 Lewis St., Hartford, Conn.

— A.A. —

NO ADDRESS

The Wilson Window & Door Co. of Syracuse, N. Y., installed some storm windows for us. We find these do not fit properly and leak badly during storms. The company promised to send a man to inspect the installation, but he has never shown up. Must I continue payments to the bank when the job is not right?

Naturally you could not know at the time of installation that these windows would leak during a storm, so would have no hesitation about signing a completion slip. Once such a slip is signed, a contract of this sort is usually turned over to a bank or finance company for collection. They can legally collect regardless of whether or not the job is satisfactory.

We checked with the Syracuse Better Business Bureau, and are told that they cannot locate William Wilson, owner and operator of the business. Evidently he has left for parts unknown. Until he can be located, there is nothing that can be done about correcting the installation.

— A.A. —

NO DRUMS

(Continued from Page 25)

and Ann to stand before him, he started to read:

"Dearly beloved—"

An interruption came from the back of the church. Fred Ford jumped to his feet and said something. The astonished congregation and minister looked in his direction.

"What is it?" sternly demanded the minister.

Ford sank back into his seat.

"What is it, Fred?" Dr. Belden repeated his question.

Fred's face was red as a blaze. "Nothing!" he muttered, "Sorry!"

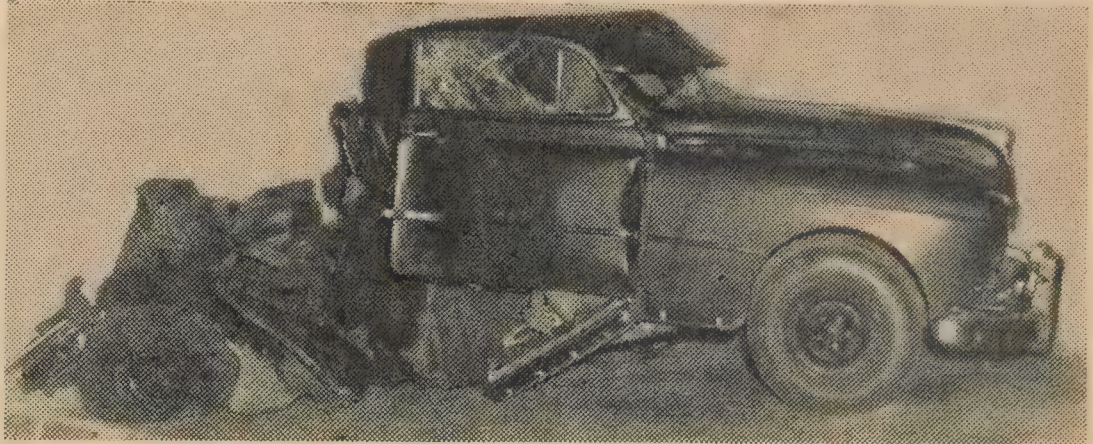

But the minister persisted: "What's bothering you?"

"Nothing!" Fred repeated. "I just thought—you were making an awful mistake. I thought these young folks were here to join the church and you were reading the wrong service!"

A general laugh, in which the minister joined, relieved the tension, and somehow that absurd incident added to the joy and happiness of the whole occasion. Even Mark and Ann relaxed. As the ceremony proceeded, women—and even many of the men—remembered when they, too, had taken those vows, "before God and this congregation." Coming at this emotional time, on top of the heart-stirring sermon, many were close to happy tears, with the resolution in their hearts that come what may, they would stand up to it and give their loved ones, their friends and neighbors, and their country, the best they had.

(To be continued)

RIDER HURLED FROM CAR
DIES FROM INJURIES

Philip Sullivan, 27, of Bernardston, Mass., was riding home from work with a friend when the car sped off a bad curve, smashed into a telephone pole and stopped in a clump of trees. Sullivan was hurled from the car fracturing his skull — he never regained consciousness.

When Mrs. Sullivan received a \$1000.00 check she wrote:

I would like to take this way of thanking you for the prompt and courteous manner that you paid the \$1000.00 as a result of the fatal accident of my son, Philip. I would particularly like to urge people to renew their insurance because in this case when my son thought he would not renew, I did it for him.

Mary J. Sullivan

AMERICAN AGRICULTURIST

FOUNDED 1842

THE FARM PAPER OF THE NORTHEAST

Another Wonderful Tour!

CALIFORNIA • MEXICO • CARLSBAD CAVERNS

FEBRUARY 17 TO MARCH 13, 1951

ON NEXT FEBRUARY 17, another happy trainload of *American Agriculturist* folks will start on a marvelous grand circle tour that will take them clear across America, down the sunny West Coast, into Mexico, and then home by way of the amazing Carlsbad Caverns and the fascinating city of New Orleans.

From the moment we board our train until we return home, this tour — like all *American Agriculturist* tours — will be a dream come true; a joyous time of relaxation, new friendships, and happy, carefree days spent in seeing many of the most spectacularly beautiful and historically interesting places in this great country of ours. Best of all, there'll be no travel worries, for every detail is expertly handled by our popular tour conductor, Mr. Verne

BeDell, General Agent of the Northern Pacific Railway's passenger department.

Before giving you details of the itinerary for this trip, we want to quote from a letter received from last winter's tour party after they returned home. Mr. Theron H. Perkins of North Adams, Mass., one of 175 persons who took the trip, wrote us:

"I was asked, as one of the A.A. 1950 California Tour party, to write you and tell you what a wonderful time we had. The entire trip far

(Continued on Page 8)

Beautiful Santa Barbara Mission, at Fiesta time. We'll spend a day and a night in this city, one of California's loveliest.

We'll spend two whole days at Mission Inn in Riverside, California — the hotel that *American Agriculturist* tour parties prefer to all others. Its beauty and charm are beyond description.

The palatial diningroom of the fabulous hotel Del Coronado, where we'll spend three glorious days.

Carlsbad Caverns, one of the great natural wonders of the world, is filled with fantastic and unbelievable formations. It's a subterranean fairy-land!

The Labranche building, with its beautiful iron grillwork, is just one of the famous landmarks in the old French Quarter of New Orleans.

A Good Calf

and plenty of her!

"GIVE a good calf the right start and she's well on her way to becoming a husky heifer and a future producer." That saying is just as true today as ever—and *it's more important* because of the high cost of replacements.

Each year thousands of northeastern dairymen are finding that by using G.L.F. Calf Starter they can give a calf the start needed to quickly grow to its inherited ability and at the same time save milk and feeding time.

G.L.F. Calf Starter is appetizing—calves readily develop a liking for it and after a few days all you need to do is put a day's supply in the feed box each morning.

The Right Combination . . . Milk and G.L.F.

Calf Starter go together for best results in raising a calf. From three weeks on a calf will begin eat-

Calf Kit—A Good Milk Replacement

After the colostrum has been fed to a new calf, it is cheaper to feed Calf Kit and send the milk from a fresh cow to the milk plant. Calf Kit is a milk substitute made of 98% milk solids and reinforced with vitamins A and D and Riboflavin. Each pound of Calf Kit replaces eight pounds of milk and helps build strong calves during the early period before dry feeding when milk is usually fed.

ing more and more Calf Starter with her milk diet. Milk or a good milk replacement can be fed with Calf Starter until calves are eight to twelve weeks old, and can be reduced as the calf increases her appetite for more solid food. As the calf consumes more and more good quality hay and fitting ration the Calf Starter can be cut out. This usually means at about 16 weeks of age.

The formula for G.L.F. Dry Calf Starter is the result of years of research and is based on the recommendations of the New York State College of Agriculture. It contains plenty of bone building minerals and growth and health promoting vitamins.

Cooperative G.L.F. Exchange, Inc., Ithaca, N. Y.

BIGGER CALVES**

AN EDITORIAL*

WHERE from HERE?

By E. R. Eastman

FOR YEARS we of *American Agriculturist* have been most emphatic in our position to high-level price supports, especially on potatoes, a perishable crop. Time and again we have pointed out that supports as administered by bureaucrats who want votes would end in a mess and, in the long run, in all kinds of trouble for growers.

We have stated many times that growers would lose all liberty of action, that the surplus problem never would be really solved by government action, and that eventually the consuming public would become completely disgusted and antagonistic toward the growers.

Our opposition to price supports as they were set up and administered was criticized by many growers and their leaders, and some of my personal friends told me I was wrong, that I was standing in the way of progress, and that price supports and government controls were here to stay.

Now it develops that our advice and opposition to unsound price supports for potatoes have been completely justified. Everything we said would happen has happened. Farmers have been told what to do and how to do it. They have been told they must vote for marketing agreements in order to get price supports. They have been told what acreage to grow, and in spite of all the regulations, acreage controls have failed miserably.

When acreage allotments were cut down, often unfairly as between both individual growers and areas, the farmers used more fertilizer, more seed and more sprays, and grew more potatoes in spite of the lower acreage. These potatoes piled up tremendous surpluses far beyond the ability of the consumer to use them, and the government had to step in and buy millions of bushels, which either rotted or were sold at tremendous loss.

What sense is there to an economic

*While the editorial on this page concerns potato growers primarily, let us not forget that the marketing of every price-supported farm product is rapidly travelling down the same road that has led potato growers into the present mess.

policy whereby a consumer has to pay from \$2 to \$3 for a bushel of potatoes, and at the same time they are sold for cattle feed for a few cents a bushel? No wonder the consumer and the taxpayer complained!

Finally, the good sense of the growers themselves began to assert itself. The handwriting on the wall became plainer. It was clear to thousands of growers that the controls clamped on by government were impractical and unworkable, that they were rapidly destroying the liberties of the growers, and that Congress itself, responding to the tremendous pressure of public opinion, would soon refuse to make further appropriation from taxpayers' money.

The result of this sound thinking on the part of the growers led a surprising rebellion in many potato-growing sections. When agreements were submitted to the growers for approval or disapproval, on the basis that they must be approved or supports would be withdrawn, growers on Long Island, upstate New York State and in Pennsylvania defeated the agreements by large majorities. Again our own editorial opinion and statements were justified.

Those votes against the agreements represented one of the soundest actions that have been taken for American democracy in years!

But now we come to a great big "BUT." You cannot throw something out, however bad, without having something good to put in its place. Free enterprise in many potato-growing communities is back in the saddle again, but it cannot ride alone. So far as potato marketing is concerned, there is now a great need and a tremendous responsibility on the part of the whole industry—including potato growers, their organizations, and the dealers and retailers who handle potatoes—to make free enterprise so far as potato marketing is concerned a success.

What can be done? We have already pointed out in *American Agriculturist* that County Agent Bill Stempfle of

(Continued on Page 11)

Here are a number of chain store representatives who met with potato growers and shippers in Steuben County recently. Standing from left to right they are: John Roswell, Loblaw Groceries; B. W. Winters, The Grand Union Co.; Lee Schultheis, Wesco Food Co.; G. W. Ryder, Grand Union Co.; Henry Braunbach, Danahy-Faxon Stores; Harry Hovey, Market Basket Corp.; Howard Shaffer, Market Basket; L. J. Frankfurt, Hart's Food Stores. Kneeling are: Left, Bill Stempfle, Steuben County Farm Bureau Agent and Edmond Fish, A & P.

Attending the meeting but not in the picture were J. L. Massie, Atlantic Commission Co. and H. Smith, Hart's Food Stores.

THE EDITORIAL PAGE

DO YOU CARE?

THE OTHER DAY in Ithaca I listened to a speech made by one of the greatest men in the world, Admiral Chester W. Nimitz who, as you know, commanded our Navy in the Pacific during the war.

It has often happened in history that some of our greatest military leaders became the strongest advocates of peace. They know better than anyone else the horrors of war. Such is the case with Admiral Nimitz, who is devoting his life now to promoting peace through the United Nations.

In the course of his talk, Admiral Nimitz said that the armed forces—that is, your husbands, your sons and your daughters—win the wars, and then the politicians lose the peace. I might add that it is also true that the political leaders in each country bring on the wars—not the men who have to fight them, nor the women who work and watch and sacrifice back home.

Putting it another way, these political leaders, even in a democracy like ours, really have the power of life and death over all our citizens, to say nothing of the power they have over our everyday peacetime liberties.

Even in a democracy the only way the individual can influence his own destiny is to do his part in helping to nominate and elect the best leaders available. How terribly, terribly tragic it is, therefore, that so many of us take so little interest in helping to decide issues and choose through the ballot box men who may influence our own lives and those of our children and our children's children for generations to come!

How tragic it is that so many of us have so little appreciation of what it cost our forefathers to establish and maintain this Republic that we have become so indifferent and complacent that we won't even take the time to vote! Believe me, if we lose that privilege (and there is plenty of handwriting on the wall that indicates we can lose it) then we will know too late what we have lost.

Rural folks are public-spirited enough in most ways. Why not call a meeting of a small group in your election district for some evening, as soon as you read this, and make arrangements to see that every voter in the district gets out to the polls this year. That is a hundred per cent citizenship job!

WHY DO FALL COLORS VARY?

EVERY COUNTRYMAN has noticed how the Fall colors differ from year to year. Last year, for example, in my neighborhood they were very vivid, but this year around our farm even the maples are a dull yellow. However, color varies from section to section. In a hundred mile drive through southwestern New York early in October, mainly through high country, I never saw the old hills more beautiful than they were then. It made one feel good just to be alive.

What makes the colors vary? Scientists used to think that the frosts affected the coloring, but now they seem to agree that they don't have much to do with it, and that the coloring of the maples (which seems to vary the most) and of some other hardwoods from year to year depends on the sugar content of the leaves.

ROADS ARE WEARING OUT

WILFRED OWEN, in an article published by the Brookings Institute, says that about 30 billion dollars, equivalent to more than one-eighth of the national income, is spent annually for automotive transportation, that is, for the purchase of cars and trucks, gasoline and other operating expenses, while only five to ten cents of the automotive dollar is used to build and maintain highways. Putting it another way, only five to ten per cent of the automotive dollar is used for roads.

The tremendous increase in trucks and automobiles is posing a gigantic problem. Every car driver

By E. R. Eastman

who uses the roads knows how rapidly they are wearing out. To arouse the people to this problem in New York State, a Good Roads Association, with headquarters in Albany, New York, has been organized. Local branches have been recently set up in most of the upstate counties.

If you are interested in continuing to have roads on which to drive your car or truck, you had better join and support the Good Roads Association in your county. And make sure that any plans which the Association develops take fully into consideration not only the main highways but the need of building and maintaining good roads to every good farm.

GOOD JOB

I WONDER if dairymen of the New York milk shed realize and appreciate what the Metropolitan Milk Producers Bargaining Agency has done for them over past years. When the different organizations were talking of getting together in the Bargaining Agency, I said in these columns that it was just as important for the milk cooperatives to cooperate among themselves as it was for the dairymen to work together, and that no dairy leader had the right to preach cooperation to his members if he didn't practice it in his relations with other dairy leaders.

For years, most of the dairy leaders of the various dairy cooperatives in the New York milk shed have worked together, and no one can estimate the crises that have been averted and the good results obtained by men representing fifty or more cooperatives in the Bargaining Agency, who put their feet under the same table and their cards right side up on top of the table.

HEAVY TRUCK LICENSE FEES

IN OUR September 2 issue I discussed the damage that huge trucks, often overloaded, do to our highways, and pointed out that although these trucks are doing a good and necessary job, in New York they pay the third lowest license fee of any state in the Union. As a result of that editorial there have been many letters, almost all of them agreeing that the license fee for heavy trucks in New York State is too low and that they are not paying their share of the damage they do to the roads.

My argument about raising license fees does not apply, of course, to light trucks, which include those used on farms. They are already taxed heavily. A lightweight farm truck pays \$27 a year in New York, which is the third highest in the Nation.

MORE GOOD COWS

DOC ROBERTS, reporting in this issue of *American Agriculturist* on his trip across the farm country of the Northeast, remarks about the rapid disappearance of the scrub cow. It would seem that much credit for this increase in good cows is due to artificial breeding, which has made it possible for dairymen to use better bulls than they could possibly afford to own. Another reason why there are more good cows is that high costs make it harder to keep the poor ones.

BETTER GET RID OF IT!

I KNOW a girl who two or three years ago was hiding her light, or rather her beauty, under a bushel of fat. Today she is one of the prettiest girls I know. Moreover, she is healthier than she was before, and she says she feels infinitely better and happier.

This girl got those fine results because she had the willpower to curb her sweet tooth, to watch the pies and cakes and rich gravies and pastries, and,

in general, to eat less and in accord with her bodily needs.

If you are lugging around fifteen to fifty pounds of excess fat, you'd better get rid of it if you want to live, and particularly if you want to be healthy. But don't try to do all of the reducing at once. The best way is to get your doctor's advice.

WARNING TO SPORTSMEN

THIS IS the time of year when thousands of indoor men get an opportunity to enjoy the outdoors and the sunshine in hunting across the farmlands. Most farmers are in sympathy with the desire of good sportsmen to get out into the woods and fields, but they have no use for the few poor sportsmen who leave the pasture bars down, break down fences, and handle firearms dangerously and carelessly.

No stranger has any more right on my farmlands than I have on a man's property in the city or in his office or store. If every hunter would remember that he is a farmer's guest, subject to the rules of hospitality and good sportsmanship, then this whole misunderstanding on trespassing would be cleared up. It is the good sportsman's responsibility to police the poor ones!

YOU WILL WANT THIS

"I have waited anxiously for *The Settlers* to appear in book form, and now that it has I am enclosing my check for \$6 for two copies, one for myself and one for a friend.

"Books of the character such as you have written should find a place in every home and library. No one can read them without being the better for such reading. They give one a vivid picture of the early days of our country, and the hardships the early settlers had to endure to make our country the best in the world, the best in which to live and raise a family."—I. G. Luce, Pa.

WE of the *American Agriculturist* staff associated with Mr. Eastman not only agree with the above nice letter, but we know also that there are few novels that have the gripping, dramatic human interest that *"The Settlers"* has. The first edition is limited. Send \$3 for each copy you want for yourself and friends and you will receive this attractive 280-page book, beautifully bound, by return mail. Address *American Agriculturist*, Dept. S, Savings Bank Building, Ithaca, N. Y.—I.M.L.

EASTMAN'S CHESTNUT

TWO OR THREE years ago I had to attend a banquet in Albany which necessitated the wearing of a bow tie. I had worn one occasionally, but it had been years since I had tied one and I had forgotten how. After struggling with it in my hotel room until the sweat was running down my back, in desperation I took the darn thing down to the lobby and got a bell boy to tie it, much to his amusement.

After that I determined to learn how to tie one myself, but the other night when a young friend of mine wanted help with his, I found that the only way I could do the job was to stand back of him looking into a mirror in the same relative position that I would be in when tying my own.

Therefore, I am very much in sympathy with the two men in this story: A partly dressed fellow stood in the door of his hotel room looking very much distressed. To another man who came along he said:

"Please, sir, can you tie a dress tie?"

Soberly and hesitantly the other man said:

"Yes, I guess so."

"Well, could you help me out?"

"I'll try."

When they got back into the room the stranger said:

"Now, lie down on that bed."

"Why must I lie down? Why can't you tie it with me standing up?"

"I can't. I'm an undertaker, and that's the only way I can do it!"

AA's Farmers' Dollar Guide

THE PRICE OF LIBERTY: America is still a democracy. Those of us who fear the trend toward a socialistic state must freely admit that if our fears were fully shared by a substantial majority of voters, the trend could be reversed at the next election! Therefore the only possible conclusion is that the fear is not shared by a majority. The next question is "Why not?" and here are six reasons:

1. **Too many of us put temporary self-interest ahead of the long-time good of everyone.** All classes are guilty—farmers in accepting price supports, laboring men in pressing for wage increases, consumers in welcoming food subsidies, industry in favoring high protective tariffs.
2. **Too many citizens fail to vote.** It's true that the choice of candidates is not always clear-cut, but failure to vote is abject surrender! Ask any power-hungry politician whether he prefers a heavy or a light vote and his honest answer must be "a light one."
3. **We have lost the fear of a powerful government.** The founders of America had it and it deeply influenced the writing of the Constitution.
4. **We are asleep.** We fail to see what is being done—how deep our government is already engaged in business, how the money that men earn by hard work is redistributed through taxation and government bureaucracy, how policies are shaped by men whose aim is "statism"—an all-powerful government.
5. **We are susceptible to promises.** We fall for promises to guarantee jobs, financial security, loans at low interest, high prices for farm products plus low food costs to consumers, federal help for education, health, and a hundred and one other promises.
6. **We have not been taught the economic facts of life.** Too many voters doubt that continued deficit spending by government leads to bankruptcy and wild inflation. Too many believe that all industrialists are crooked and that all government employees are honest and unselfish. Too many want the government to do too many things we should do for ourselves.

The answer to the serious indictments contained in the foregoing paragraphs seems fairly simple. Let's use our "horse sense" to figure out a few things for ourselves, tell the world our conclusions and act on them, especially at the ballot box.

America is still a democracy. The trend toward statism can be stopped if a big majority of voters wish it!

SPENDING: As war always does, the Korean incident encouraged the government spenders. "Before it," say the spenders, "many pointed to the federal debt as a forerunner of doom and protested against an \$18 billion defense budget. Now no one protests \$30 billion or more for defense!"

The conclusion seems to be that the size of the debt is of no consequence and therefore that there is not the slightest reason for cutting the budget for domestic expenses!

It would be as logical for the man who borrows to the limit of his credit when a child needs an operation to save its life to conclude that he can continue to go deeper and deeper into debt for the rest of his life!

In the light of present events, failure to cut the domestic federal budget to the bone, even to abandoning many costly socialistic ventures, is the wildest folly.

LEGALIZED ROBBERY: Even though America might handle the national debt at its present size, or larger, without bankruptcy, there is a little-understood process that is nothing short of legalized robbery. We refer to creeping inflation. As a result, thrifty Americans who deny themselves present comforts and luxuries that they may not become subjects of charity in their old age find, when they can no longer work, that their savings will buy only half or less of the things the money would have bought at the time they saved it.—Hugh Cosline.

The Song of the Lazy Farmer

NO OTHER time of year at all is half as wonderful as fall. When else does nature go all out so you want joyfully to shout? Not winter's white nor summer's green, nor even springtime in between, puts on a colorful display to match what I can see today. The trees bear leaves of ev'ry hue, the sky was never quite so blue, and even brand-new snow can't be as white as clouds appear to me. And there is something 'bout the air with which there's nothing to compare; it has a fresher, cleaner smell, with just a touch of cold to tell that snow will fly before too long and winter winds will howl their song.

But even without painted trees or touch of winter on the breeze, I'd still like autumn much the best because it gives more time to rest. Oh, sure, if you're like neighbor is, and rush around with zoom and whiz, you're hurryin' to pick the corn and helpin' fall pigs to be born; or else you're patchin' up the shed and reachin' 'way above your head to get the storm sash all put in before the zero nights begin. But all that kind of stuff can wait, next month ain't going to be too late; besides, there's not much time left yet in which it's warm enough to set and rest beneath my fav'rite tree, out where Mirandy can't spot me.

quick and lasting rust protection for your big investment

Farm machinery is important—it represents a large investment that will give you years of extra wear if you give it proper care. THIS FALL is the time to protect your valuable farm machinery from becoming winter feed for rust!

ESSO RUST-BAN 347 — is easily and quickly applied using a rag, swab, or old brush to plows, cultivators, discs, and other implements... It forms a protective coating that helps prevent rust... provides money-saving, all-winter protection. Use Esso Rust-Ban 347 NOW and add years of usefulness to your farm machinery!

ESSO RUST-BAN 603 — to help prevent rust attack on the insides of idle engines. Just the thing for that all-important tractor engine... forms a protective film on inside surfaces, gives a lasting coating to inner precision parts, provides dependable "lay-up" protection! Obtain directions before using.

FOR FREE ESSO FARM NEWS — Ask your Esso Farm Distributor for a free subscription to the regularly published **ESSO FARM NEWS** or write to: Esso Farm News, 15 West 51st Street, New York 19, N. Y.

Constant research by Esso helps develop better products for better farming —

ESSO EXTRA MOTOR OIL — for Extra engine protection... Extra oil economy in your car, truck or tractor.

ESSOLUBE HD MOTOR OIL — just right for heavy-duty diesel or gasoline tractor and truck engines. Dependable all-weather service for rough going.

ESSO EXTRA GASOLINE — Stepped-up with Extra power, for long mileage, high anti-knock performance under load!

ESSO TRACTOR FUEL — for "distillate" burning tractors. High power, efficient operation... low flash-point for faster starting.

How to Control MICE in Orchards

By W. ROBERT EADIE

AT THIS TIME OF YEAR, fruit growers are thinking of ways and means of protecting their trees against over-winter damage from meadow mice. All too many growers have suffered severe financial loss in the past from mouse damage, and the wise grower will take direct action now to protect his investment.

There are a number of well-known ways to reduce the possibility of mouse damage. Some of these are: the use of hardware cloth tree guards, especially on young trees; frequent mowing to reduce mouse protective cover on the orchard floor; and the use of vegetation bare areas at tree bases. All of these practices have some value, but for real security an annual fall mouse-baiting program must be carried out.

Hand Baiting

A successful method of placing poisoned mouse bait by hand has long been in use. In this method, firm apples are cut into half-inch cubes and dusted lightly with a poison. The poison may be the U. S. Field Mouse rodenticide, usually obtained through county agricultural agents, or finely powdered arsenic (arsenic trioxide) may be used.

For either poison the bait is prepared in the same way. A 2-inch layer of apple cubes is placed in a large pan, and the poison is sifted over them while stirring, until a light, even coating is obtained. An ounce can of the U. S. Field Mouse rodenticide will prepare about 10 quarts of bait, while 1 level teaspoonful will prepare 1 quart. One pound of the powdered arsenic will prepare 3 or 4 pecks of bait. One peck should treat 4 or 5 acres if the baits are carefully placed.

In hand-baiting the orchard, the poisoned baits are placed directly in active mouse runways or trails and in burrows. Three or four baits are placed around each tree and one or two between the rows. Each bait is covered with grass or mulch. A fork or ice-pick may be used to handle the poisoned apple cubes. Never use bare hands with these highly toxic poisons. Good weather aids mouse control, since the mice are more active then and will find the baits more quickly.

New Methods

While these hand-baiting methods are effective in mouse control, they are laborious and expensive in the large orchard, and are best adapted to small acreage orchards and some special situations. A new method has been developed by which mouse bait can be distributed rapidly with common mechanical seeders, resulting in good control under most conditions and permitting substantial savings in labor costs. Such savings may run as high as 75 per cent of the total costs of baiting the orchard.

Using one seeding device, the orchard can be baited at a rate of less than 15 minutes per acre. Last fall the method was used in over 10,000 acres of commercial orchards, with growers reporting generally good results.

Common hand-operated garden seeders may be used to distribute a special grain bait in lines across the orchard. The bait is dropped along the drip-line on both sides of each tree row in the heaviest grass cover. It is not necessary to criss-cross the orchard. In us-

ing garden-seeders the furrow openers are removed and the furrow closers either removed or raised as high as possible to avoid snagging in heavy vegetation. Seeders should be adjusted to deliver grain at a rate of 10-20 grains per foot of row. At this rate, 3 or 4 lbs. of bait per acre will be used.

Protect Birds

Shut-off devices on seeders may be used to regulate the flow of grain, since the poison bait should not be dropped on open ground such as roadways or bare spots in the orchard. Bait in these places will not be found by mice and will be wasted. It may also introduce possible hazards to wildlife. Fence rows, borders, or uncultivated fields near orchards should be treated with a row of bait to reduce mouse concentrations.

Choosing good weather for the control operations is important since heavy rains may wash the poison from the bait. Light rains of short duration after placing the bait may not affect it seriously, but good weather during operations is an advantage. Bait should be placed before leaf-drop and before the grass mats down in late Fall. It is best if the grain can drop freely through the grass where the mice will find it more readily.

Growers with large orchards may adapt power-drawn seeders to speed up baiting operations. Corn planters have been adapted by using only one of the seeding units with the smallest possible seed plate. Other growers have attached garden seeder units to light tractors in various ways. One effective method is to attach a seeder unit to the bolts that normally hold a cutter bar on a light tractor with side-mounted mower. This can be easily raised or lowered to control the flow of bait.

How to Prepare Bait

One or two commercial firms have been selling prepared bait of the type used in this method of orchard-mouse control. The special bait may be prepared by the grower himself according to the following formula:

- 100 lbs. cracked corn
(coarsely cracked)
- 2 lbs. zinc phosphide
- 1 quart vegetable oil
- ½ ounce methyl green dye

Wear gloves and mix the zinc phosphide and the methyl green dye with the oil to form a thin paste. Avoid breathing the dust, and work outdoors or in an open well-ventilated place. Pour the paste over the grain in a large metal tub and use a hoe to mix the mass very completely so that the grain is evenly coated. Avoid breathing the gas given off while mixing. Any drum-type mixer may be used to prepare the bait, but it should be scrubbed out thoroughly with soapy water before using for any other purpose.

The prepared grain may be sacked immediately. Since zinc phosphide is poisonous to humans and to all animals, the material should be stored carefully. Do not store the prepared bait in tightly closed buildings where people or animals are present, but keep it dry. It will keep several months in a dry place without serious loss of strength, but it should not be stored from one season to the next. Label all containers "Poison" and use them only for this purpose.

FIRE KNOWS NO FAVORITES!

safeguard your farm investment 4 ways
with one or more

Quonset 40

Quonset 24

Quonset 32

4-WAY PROTECTION

- 1 Localize fire—prevent spreading to other buildings
- 2 Will not ignite from flying sparks, falling embers
- 3 N-A-X Steel ribs help reduce danger of collapse
- 4 Help contain fires in single section of building—give time to remove livestock, machinery, crops and other storage

Every year in every section of America, farm fires take a terrible toll in lives and property . . . more than \$100,000,000 worth of equipment, livestock, machinery and crops in storage—plus hundreds of human lives . . . often destroy long years of labor in a few short hours.

Why not plan now to protect your farm property the way so many other farmers are doing—with all-steel, fire-safe Quonsets that assure 4-way *plus* protection . . . that not only resist flames, but once a fire has started, help localize them.

Remember, fire knows no favorites. So, for real peace of mind . . . for the fire protection your farm deserves, ask about Quonsets at your nearest Quonset dealer's—before it's too late!

Another Wonderful Tour!

(Continued from Page 1)

exceeded our expectations. We certainly are grateful to you for having made it possible.

"The scenery was wonderful, the food excellent, hotel accommodations the best, and Mr. BeDell most efficiently and graciously cared for our every comfort. We all think it is a wonderful service that you are rendering in making this tour possible to a great number of people that would never be able to take this trip otherwise."

Another proof of the pleasure which these trips give, and the lasting friendships made on them, is the number of reunions held by our tour members. For example, on August 13 of this year, the 1949 California Tour party held a picnic-reunion at Taughannock State Park to which 125 of the 200 tour members came, and they poured in from every state in the Northeast!

"All-Expense" Ticket

So if you want to know about A.A. tours—ask the man or woman who has taken one. They'll tell you there are no others like them. The price of the all-expense ticket includes everything—rail fares, pullmans, baggage transfers (you won't have to lug any suitcases); sightseeing, hotels, all meals except one, and even the tips. There'll be nothing else for you to pay except what you spend on souvenirs and personal expenditures. The cost of the ticket is very reasonable and less than it would cost you to go in any other way and have the same fine accommodations.

The first day of our tour will be a daylight trip across New York State, during which we'll all be getting acquainted. The next morning we'll be in Chicago and after breakfast we'll have a 50-mile tour (in glass enclosed buses) of the city and its beautiful parks. The next day we speed through the Lakes region of Minnesota and the grain belt, and then on to the snowclad Rockies—a magnificent sight.

The time will pass very quickly on that trip across America—talking and laughing with our fellow travelers in Pullman and lounge cars, playing cards, watching the beautiful scenery go by, and, above all, enjoying those famous, unforgettable Northern Pacific Railway meals!

Fascinating Sight

Our first stop on the West Coast will be the beautiful city of Portland, where we'll take one of the most scenic motor trips in America, along the famous Columbia River Highway. Then on to sunny California, stopping for 3 days in San Francisco, where we'll see Mission Dolores, Twin Peaks, Golden Gate Park, Seal Rocks, Cliff House, Fisherman's Wharf and many other fascinating sights.

Leaving San Francisco, we set off on a leisurely 2-day motor trip, with overnight stops at two of California's most beautiful and historic cities — Santa Barbara and old Monterey. En route we'll visit Stanford University, a grove of giant redwoods, the world famous Seventeen-Mile Drive, Carmel-by-the-Sea, and San Miguel Mission.

We'll have two wonderful days in Los Angeles, where we'll tour the city,

visit the famous Farmers' Market, Beverly Hills, Santa Monica, Hollywood, and see the beautiful homes of movie stars. We'll visit Ghost Town, an amazing replica of a frontier town of gold rush days, and while there we'll stop at Knotts Berry Farm for their famous southern fried chicken dinner.

Summer in Winter

From Los Angeles we motor to Coronado Beach to stay for three days and nights at the fabulous Hotel Del Coronado. You'll hate to leave this beautiful hotel, with its sunny patio, heated swimming pool, perfect meals, and charming rooms. While there we'll visit Tijuana, Mexico, and San Diego.

Then comes one of the most thrilling and unforgettable parts of the trip — a two-day stay at Mission Inn, in Riverside, California. Every *American Agriculturist* tour party loves this unique hotel. Its beauty, charm, and peacefulness are beyond description.

The next day we travel by train through the Orange Empire, San Bernardino Valley, Palm Springs (an oasis in the desert), the Imperial Valley, and through Mexico for a 50-mile stretch. At El Paso, Texas, we leave our train and motor to the Carlsbad Caverns, an underground fairyland that ranks with the Grand Canyon as one of the wonders of the world. Back in our train that night, we travel on to New Orleans, where we'll spend two days exploring this glamorous old southern city.

Folks You'll Love

We believe that this trip is one of the very finest we have ever planned for your pleasure. Decide now to come with us. Get someone to look after things for you while you're away, and give yourself an experience you'll never forget—an absolutely perfect trip, in the company of folks you'll love.

Fill out and mail today the coupon at the bottom of this page. It will bring you an illustrated itinerary of the trip, with complete details, including the exact price of the "all expense" ticket from your location. Its reasonableness will surprise you.

Don't put off writing to us if you want to take this trip. The demand for reservations is sure to be very great.

— A.A. —

FOR BREAKFAST

IN reference to your editorial "What do you eat for breakfast?", don't you think that the good breakfast you referred to should include some bacon, ham or sausage with those eggs, or what about scrambled eggs with calves' brains? Let's include all the important and enjoyable items of the diet in that best breakfast of yours.

—Myron M. Fuerst, Pine Plains, N. Y.

— A.A. —

A new insect killer has been found in common ox-eye daisies. It is called "scabrin." So far it is in the experimental stage, but there is a possibility that some day farmers may be growing the raw material for their own insecticide.

Mr. E. R. Eastman, Editor
American Agriculturist
Box 367T, Ithaca, N. Y.

Dear Mr. Eastman: I am interested in your Winter Vacation Tour, February 17 to March 13, 1951. Please send me, without any obligation on my part, full information regarding cost of the trip, with complete itinerary.

Name

Address

(Please write name and address plainly)

14,000 lb. G.V.W. Model F-5, 158-inch wheelbase, shown above is one of over 175 Ford Truck models ranging from 95-h.p. Pickups to 145-h.p. Big Jobs.

**Says John Wiedeman
of Bourbon, Indiana**

"For hauling hogs, and grain, and fertilizer, and a hundred other things, my Ford F-5 is the best truck I ever owned. The 14.5 miles per gallon I get saves me money. With V-8 power I handle the biggest loads, and I handle them fast."

"Saves me a lot of time...a lot of work...and a lot of money!"

"I take 6,916 lbs. of hogs to market. With Ford power I lose no time getting there and back." Only Ford gives you a power choice of V-8 or Six, four engines for over 175 models, 95-h.p. to 145-h.p.

"I pack my 6'1" into the big Ford cab with ease," Wiedeman tells Ford Dealer Donald Poulson. Ford-welded, all-steel cab has Air Wing ventilators in door glass. Level Action cab suspension. Lounge-type seat.

"Fertilizer at one hundred pounds a bag is heavy stuff but I get it to the field with never a hitch." Full-floating rear axle. Double-Channel frame, 12-leaf rear main springs are built extra-strong.

"My friend Lester Kuntz sees less of me around the gas station, my Ford's so saving on gas and oil." Switch to Ford Truck economy! America's No. 1 Truck Value is built to do more per dollar for you.

**WHY LET YOUR CALVES
EAT UP YOUR
MILK PROFITS?**

When you can feed KAFF-A

The safe replacement for milk

Don't feed milk to your calves. That eats into milk profits fast! Feed Kaff-A and sell your cow's milk. Low cost Kaff-A is an absolutely safe replacement for milk! When you feed Kaff-A, the milk your cows produce goes to the dairy—puts dollars in your bank account. Just 1 lb. of Kaff-A can replace up to 10 lbs. of milk in calf feeding. That means every 50-lb. box fed with low-cost hay and grain can release as much as 500 lbs. of milk which you can sell for extra profit!

With Kaff-A no milk is needed after the 10th day. Kaff-A is tested, tried, proved a safe replacement for milk. A million healthy heifers have already been raised on it! Its dried buttermilk base is known for its nutrition. In addition, Kaff-A contains other dairy by-products, some cereal products, and plenty of Vitamin A and D Feeding Oil!

Don't risk your calf's health on inferior imitations of Kaff-A. A few pennies saved now may cost you many a dollar if your calf fails to grow quickly into a high producing cow. Feed Kaff-A and be sure that your calves get the nutrition that helps develop good milkers... good breeders! Ask your feed dealer for a box or pail today.

The modern truck unloading dock at the Buffalo stockyards.

How Buffalo Stockyards Operate

By ED LEENHOUTS

TAKING old institutions for granted is a trait common to all of us. In noting the reaction of many livestock farmers in western New York, the thought occurs to me that the Buffalo Stockyards may fall into such a category.

For instance, it may surprise you to know that it is the largest single livestock market in New York State. In 1949 it handled well over 166,500 head of livestock from New York State farms alone. The total value of all the stock sold on this market was almost eighteen million dollars. Through the feeding station which is operated in conjunction with this market, a total of over 28,000 cars of livestock was handled en route to destinations east of Buffalo.

In 1949 it cost the patrons of this market an average of \$1.01 per head to have their stock sold. Based on the gross sale price of the stock, the farmer paid 1 1/4 cents for each dollar's worth of stock sold. This included yardage as well as commissions.

The Buffalo livestock market is under the supervision of the United States Department of Agriculture. The Packers and Stockyards Division of the Federal Department is the enforcement agent and is particularly concerned with the welfare of the farmer producer.

Weighing facilities and weighmasters are very important in a well-operated stockyard. At Buffalo, the weighing is accomplished by a neutral party without interest in the buying or selling activity. The scales at Buffalo are tested frequently by neutral mechanics for constant accuracy, tolerance allowance

being limited to one pound in 1000 pounds of test weight.

Selling charges by the commission firms and yardage charges by the Stockyards are governed by authority and permission of the Packers and Stockyards Division of the U. S. Department of Agriculture. They cannot be increased or decreased without proper authority and are applied indiscriminately to all patrons. Sales agencies are required to provide a bond to insure and guarantee full financial return to the farmer producer. You cannot lose.

The Buffalo livestock market enjoys the benefit of veterinarian inspection and supervision provided by the U. S. Bureau of Animal Industry in maintaining a high degree of sanitation and prevention of spread of contagious diseases. The Buffalo livestock market operates under all these protective measures, plus many other attractive features:

1. It is open 24 hours every day to receive livestock.

2. Each owner's livestock is penned separately to avoid excess shrinkage.

3. Each pen has feed racks and pure City of Buffalo water.

4. Competent salesmen are present with years of experience and complete knowledge of demands and trends.

5. There are sufficient packer-buyers and order-buyers for all classes of livestock.

6. There is impartial reporting of market activity.

The Buffalo market operates 5 days every week and is a valuable institution for the livestock interests in New York State.

PREFERS HIS OWN BALER

Russell Young baling hay on his farm at Randolph, New York. This is the third season he has had his own baler. Before that he had some custom work done, but couldn't always get a baler when hay was just right. He likes baling because, as he says, "It not only lets you get the hay in fast, but also saves time in feeding. Where it once took an hour to feed hay, it now takes 15 minutes."

The field shown here was mowed on a Monday, raked Wednesday, and baled on Friday. Russell can put up 200 bales an hour. He has 75 to 80 acres of hay and does some custom work.

Where from Here ?

(Continued from Page 3)

Steuben County, a great potato-growing county in southern New York, has started work on a constructive marketing idea. He called a meeting of potato growers, dealers and some retailers. During this meeting potato farms and storehouses were visited, and the problems of growing and handling potatoes straight through to the consumer were discussed. That is all to the good.

On the other hand, a meeting of growers on Long Island was called several weeks ago and I am informed that it deteriorated into an attempt to place the blame for the present situation on everybody concerned. Growers must look ahead, not backward! To succeed, any marketing plan must be worked out with buyers, shippers and retailers, all of whom have a stake in the issue.

In September about thirty men interested in growing and marketing potatoes met at Syracuse at the invitation of Harold ("Red") Evans, President of the Empire State Potato Club. Represented were the Potato Club, the New York State Farm Bureau Potato Committee, and the P. and M. A. State Advisory Committee. Here it was agreed to promote legislation for compulsory branding of potatoes by grade when sold in closed packages and to use all available agencies to promote the use of more potatoes by consumers this season.

For years many of my friends residing in villages and small north-eastern cities have been very emphatic about their inability to buy good quality potatoes in the local markets. Some of these people have almost quit eating potatoes or have materially reduced their consumption; others have turned to Idaho and other potatoes brought in from outside. I know from personal experience that this complaint is justified. I grow my own potatoes, but time and again I have tested potatoes out of the local markets only to be disappointed in their quality. Grow-

ers and their organizations are neglecting these markets. It seems to me that one of the first things is to do a better job of putting a quality potato, quality packaged, in the local markets.

The quality of potatoes this year is excellent, so this is a good time to go all out to advocate the use of more potatoes and to make sure that they are good. We of *American Agriculturist* are going to do it in every way we can in our household department. But there should be articles about the good qualities of potatoes in many magazines and newspapers, and that, in my opinion, is one thing that growers' organizations are for.

On October 9, the Empire State Potato Club opened a plant at Homer, New York, for canning potatoes in sizes for home consumption and for hotels. Such markets will help, but they are not enough. If an all-out effort is not made this fall to make free enterprise work, you can expect more government in the potato business.

The problem is particularly difficult because we now have a tremendous over-production of potatoes due to government practices. The result is altogether too low prices to farmers for potatoes this fall.

While these low prices are tough to take, in the long run they may be good medicine in reducing the production of potatoes, which in general is higher than the market will take at reasonable prices without subsidizing by the taxpayers. Growers must start with the fact that there are too many potatoes!

So my plea to every grower and every potato organization leader is to wake up now before it is too late and work out with dealers and retailers definite, practical, down-to-earth plans for moving potatoes. If you don't, the government will be back running your business with more controls than ever!

ARTIFICIALLY BRED COW BORN IN 1936

THE quickest way to start a discussion is to claim the "oldest" something. We did it in our issue of August 19 when we said that Betty, a grade Holstein, owned by Prof. and Mrs. Raymond Albrechtsen of Ithaca, N. Y., was the oldest living artificially bred cow in New York.

We should have made clear that she was the oldest cow bred artificially through an organized breeding association. W. S. Massie, farm manager at the New York State Vocational Institute at West Coxsackie, says he has one that was "artificial" and born three years earlier than the Albrechtsen's Betty.

Says Mr. Massie: "I wish it to be known that I have a grade cow that is artificial who was sired by Cornell Ormsby Lad 694,018. She was born Mar. 16, 1936. Her total lifetime production to date is 212,046 lbs. of milk in 11 lactations. Her high year was 25,189 lbs. milk and 781 lbs. fat, D.H.I.A. She is owned by the State.

"Mr. and Mrs. Albrechtsen deserve a lot of credit for their outstanding cow but we also are very proud of Old 53!"

—A.A.—

COWS' VACATION

Much has been said and written about the importance of feeding cows when they are dry. Practically everyone will readily admit that it is important. Yet the chances are that more than half the cows that are dry are not fed adequately.

Definite experimental figures prove beyond a question of a doubt that over

a period of a year you will get more milk by liberal feeding when the cow is dry than you will get at any other time.

Any good cow is entitled to a vacation. Six to eight weeks is the standard, but it may be a little more or less depending on conditions.

—A.A.—

GOOD RAMS MAKE "BUCKS"

Sheep breeders cannot afford to use a poor ram. An \$80 yearling ram, used two years on 50 ewes, and sold as a three-year-old for only \$30 costs 50c for each ewe bred annually. Two pounds of lamb will about pay this ram fee.

A few extra pounds of lamb will pay the added cost of a top quality ram. A good ram is one of the best money makers you can own.

—George R. Johnson

—A.A.—

TRIPLET CALVES

On August 4 one of our cows had triplet calves. We didn't know it until my son and I went to the pasture lot about 8:30 at night to get the mother and her calf. In addition to the one with the dam, we found two others lying by themselves. They had had nothing to eat and couldn't even walk. We carried them to the barn and worked with them until past midnight. We fed the weakest one little and often for 48 hours, and by the end of that time it was as lively as any calf.

We take *American Agriculturist* and wouldn't be without it. —Wm. Cooke, R. D. 1, Stanley, N. Y.

Protect UDDERS AT CALVING TIME

Use the
**BEACON
DRY COW
FITTING PROGRAM**

SMYRNA—production in the succeeding lactation—2 x—
299 d—582 lbs. BF.

DEAN—production in the succeeding lactation—2 x—
365 d—610 lbs. BF.

MAID—production in the succeeding lactation—2 x—
365 d—650 lbs. BF.

YES . . . the Beacon Dry Cow Fitting Program can help you control udder congestion at freshening time. It's being done every day at our dairy research farm. It's being done for thousands of satisfied customers every year. Right on this page are some actual examples of what the Beacon Dry Cow Fitting Program can do for your cows.

Observe the condition of the fresh cow udders on the left. These cows were fed on the Beacon Fitting Program. Note the high butterfat production following the date of the picture. Note the udders—their size, make-up and condition—note the complete absence of caking and congestion. These cows can be put on feed more quickly and safely than if their udders were congested. Early return to full feed helps retain body reserves built up during the dry period.

Your cows can freshen with large udders—with a minimum of caking—follow the Beacon Dry Cow Fitting Program.

(1) Condition with BEACON FITTING RATION

(2) Freshen with BE-CO-LASS

We Need Florida Sunshine Too!

"us cows that is"

You can't send your cows to Florida, but you can bring sunshine to your cows with Florida Citrus Pulp—now available year 'round! Florida Citrus Pulp is highly palatable and cattle eat it readily. A bulky feed which keeps well in storage, this Citrus Pulp is extremely high in TDN (total digestible nutrients).

The fiber content of Florida Citrus Pulp is extremely low and the feed contains factors which stimulate milk production. This feed imparts no unnatural flavor to the milk.

THE SUNSHINE CATTLE FEED!

Florida Citrus Pulp is mildly laxative and imparts a sleek appearance to the cows, giving them a glossier coat of hair. The feed contains the important minerals—calcium, magnesium, phosphorus, iron, copper, zinc and manganese—essential to milk production and animal growth.

For free, illustrated folder giving complete information about Florida Citrus Pulp, write a card today to Citrus Processors Association, P. O. Box 188-A, Lakeland, Florida.

CITRUS PROCESSORS ASSOCIATION

Try Them All and You'll Buy a HOMELITE

STRAIGHT BLADE or BOW SAWS

We'll admit, a Homelite Gasoline Engine Driven Chain Saw costs a little bit more. But to any man with a business head on his shoulders, this slight difference in price doesn't mean a thing... not when you consider how much faster a Homelite Saw cuts... not when you realize how much easier a Homelite Saw is to operate... not when you figure how much less it costs to keep a Homelite Saw in efficient productive operation.

Built and backed by Homelite, manufacturers of more than 285,000 gasoline engine driven units, this saw is the last word in chain saws. It has a high powered, rugged, dependable engine... an automatic clutch... an automotive type carburetor... a perma-sharp, chrome plated, narrow kerf chain that stays sharp longer. Yes, and it is backed by a service policy that guarantees to keep your Homelite Saw in action always when you need it.

NEPPCO Demonstrates 50 Years Poultry Progress at Harrisburg

By L. E. Weaver

THE Northeastern Poultry Producers Council does many outstanding things for the poultry industry besides staging the annual NEPPCO Exposition at Harrisburg, Pa. NEPPCO is the voice of poultrymen in the Northeast speaking in unison on federal industry advisory committees, and in nationwide poultry organizations. NEPPCO has been conducting an Egg Grading and Marketing School for years which has done much for uniformity of egg grades. NEPPCO sends special market letters to groups such as turkey and broiler growers; and to all members of the organization is sent each month the "Neppco News" which does a good job reporting things as they are and making dependable predictions of things to come in the poultry field. But it is the Exposition that gets the publicity and about which you think when NEPPCO is mentioned.

This year's theme was "Fifty Years of Poultry Progress." As you entered the big hall, directly in front was an antique, unpainted, weather-beaten chicken coop with matching picket fence that made a small yard for a few Brahma chickens. A pile of hay, an ancient corn sheller, a battered water container and a few ears of corn completed the picture. A sign read, "This is the way it all started." Nearby was an old-time country store with a pot-bellied stove, hanging oil lamp, cracker barrel, and a lot of other "necessities" that I haven't seen in years. Made me a bit homesick for those good old days! Next to this store was a modern, streamlined, brilliantly-lighted store complete in spotless enamel and glass. The contrast was terrific.

Rice Memorial Library

In addition to the 140 exhibits a number of activities are an important part of the annual NEPPCO show. The one of most significance to me was the dedication of the James E. Rice Memorial Library.

For several years, friends and former students of Professor James E. Rice have been assembling books, periodicals, historical material, and funds for a poultry library at Cornell University as a memorial to the "Dean of the Poultry Industry." Professor Rice, now 85 years of age, came from his home in Miami, Florida, for the dedication, and thrilled the audience with the same dynamic personality, the same challenging philosophy of living and doing, the same enthusiastic and optimistic outlook on the future that inspired his students in other days and made him an outstanding leader of men. Most appropriately his son John, just completing his second year as president of NEPPCO, was also on the platform.

Dewey Termohlen, in charge of poultry in the U.S.D.A., formally presented the library to Cornell University, and handed a check for \$25,000 to Dr. J. H. Bruckner, head of the poultry department at Cornell, who accepted it for the University.

Hen of the Year

Twenty-nine hens had been entered by their owners in the Hen-of-the-year contest. Each hen had laid at least 300 eggs and earned at least 300 points in one of the 14 standard egg-laying tests. Their final rating depended upon the number and size of eggs, their condition, their standard quality as a representative of their breed, and their pedigree. A white leghorn owned by J. A. Hanson & Son of Corvallis, Oregon, scored 88.43 and was chosen Hen-of-the-year. The four next closest hens represented four different breeds: 2nd—W. Leghorn, J. A. Hanson and Son, 74.11; 3rd—R. I. Red, Capital Breeding

Farm, St. Paul, Minn., 72.61; 4th—B. P. Rock, Mt. Fair Farm, Watertown, Conn., 71.06; 5th—N. Hamp., R. H. Bingham, Hardwick, Mass., 69.68.

Youth Program

Under the leadership of Prof. John Taylor of New Jersey, a NEPPCO committee conducts a program for 4-H and FFA teams in NEPPCO territory. Eleven states sent egg-grading teams. The team from Rhode Island took first place with New Jersey, Virginia, and New Hampshire, following in that order.

Demonstrations were of two types: poultry production and poultry consumption. In the production section the team of William Lazar, Jr., Jeanette, Pa., and James Bower, Irwin, Pa., placed first with a demonstration of poultry killing and dressing. The Virginia team of Roberta Towles and Nell Towles took second place. Following were: New York, Massachusetts, and New Hampshire.

In the consumption or foods section, Shirley Wilson of Rush, New York, took first. Vivian Hartenback and Joan Zultowski of Monaca, Pa., took second place. Teams from West Virginia, Massachusetts, and Rhode Island followed in that order.

The young people were given a tour, a breakfast by the Sears, Roebuck Foundation, and a banquet in the Penn Harris Hotel by the A & P Company at which awards were made to the winners.

Educational Program

Every morning and afternoon in the "small arena," several hundred people listened to other poultrymen, professors, pathologists, or industry leaders presenting new ideas on feeding practices, time to start pullet flocks, handling farm labor, the when, where and how of credit, modern poultry houses, and many other timely topics. As was true last year, the most interest centered around the "disease control round-up" the last afternoon.

Laying Test Awards

This year The Quaker Oats Company gave a dinner at which editors of poultry periodicals made presentations to laying test winners. The Quaker Oats Company presented checks totalling nearly \$9,000 to their award winners.

NO NEED TO WEAR A TRUSS FOR RUPTURE

That Binds, Cuts, Gouges,
Slips and Does Not Hold

If you must wear a Truss for Rupture, don't miss this. A Post Card, with name and address, is all you send to W. S. Rice, Inc., Dept. 65-M-13, Adams, N. Y. to get FREE, and without obligation, the complete, modernized Rice Plan of Reducible Rupture Control. Now in daily use by thousands who say they never dreamed possible such secure, dependable and comfortable rupture protection. Safely blocks rupture opening, prevents escape without need for bulky, cumbersome Trusses, tormenting springs or harsh, gouging pad pressure. Regardless of how long ruptured, size, occupation, or trusses you have worn. TRY THIS, and send your Post Card today.

Question Box

How much straw is recommended for mulching strawberries?

The usual recommendation is 4 or 5 tons per acre. Figured at the rate of 5 tons, this means that an 80-pound bale of straw will cover 40 sq. ft. If you have a strawberry bed 8 ft. wide and 50 ft. long, this will make 400 sq. ft. and you will need 10 bales to cover it. Covering it this heavily will mean that it will have to be removed from the rows in the spring; but, left between the rows, it will save a lot of moisture.

A lighter application has its uses in keeping the berries clean and adding humus to the soil. It is not usually necessary to remove a light application, but you may need to loosen up the straw in the spring so the plants will grow through it.

Are there any rules which a backyard gardener could follow in pruning a couple of mature apple trees?

The biggest thing to keep in mind is to take out many small branches near the outside rather than cut off several large ones. Aside from that, take out dead branches, those that interfere with other branches, and keep in mind that by cutting back certain branches you tend to keep the tree closer to the ground.

Is it true that where apples and potatoes are stored together the potatoes do not sprout?

We have heard on good authority that this is true but we have never tried it. It is a well-known fact that apples give off a gas which hastens the ripening process of apples and, according to the story we hear, the same gas stops the growth of sprouts on potatoes. This, however, is not of interest to the commercial grower but rather to the home gardener who stores a few potatoes and apples for winter use.

If ladino clover is as good as its boosters claim, why isn't clear seeding recommended?

There are two reasons. With the exception of alfalfa, you usually can get a better yield of any legume when it is grown in combination with one or more grasses. In addition, ladino is very difficult to mow, particularly when it is grown alone.

We have an unusually large proportion of small onions in those which we grew from seed this past summer. What causes this condition?

There are two possible causes: (1) that you seeded too thickly; (2) that the soil did not contain enough fertility to make a normal growth.

In any event they are not useless. Onion sets have been relatively expensive. Save them and use them for onion sets next spring.

Does it harm cows if they eat corn which has smut on it?

Cattle have been fed on smutty corn at various colleges on an experimental basis and there never has been evidence that it does any harm.

— A. A. —

Squirrel Trouble

Will you please tell us how to keep half-grown gray squirrels out of the house? They arrive in large numbers and keep us awake at night, racing through the storage space under the eaves. Setting traps with nuts only keeps them coming. We can't find out where they get in. Isn't there some way we can stop this nerve-racking racket?

Editor's Note: If any reader has had success in handling this nuisance we would appreciate hearing about it so that we can pass it along to our reader.

It's the *Inside* Cure that Counts Most

When it comes
to *Flavor!*

FIRST, DISSOLVE MORTON'S TENDER-QUICK IN WATER AND PUMP ALONG THE BONES. THIS STARTS THE CURE INSIDE.

SECOND, RUB THE OUTSIDE WITH MORTON'S SUGAR-CURE. THIS STRIKES IN, CURING TOWARD THE CENTER OF THE HAM.

OFF flavor and undercured spots are most likely to develop around the bone. That's why the inside cure is so important!

When you cure the Morton Way, you know you're putting the cure where it's needed *first*. Tender-Quick pumped along the bone starts the cure *inside*, assures you an *even* cure from the bone out. Sugar-Cure on the outside, gives you *uniformly* cured meat and imparts rich smoke flavor.

Morton's Meat Curing Products are ready to use — no mixing — no uncertainties. Ask your dealer for Morton's Sugar-Cure, Tender-Quick and Sausage Seasoning. You will have the finest cured meat and sausage you have ever put up.

MINRALTONE HELPS BUILD CHAMPIONS

Sir Standard Bill, shown above, is herd sire for the 100 head of Registered Jerseys at Senn's Dairy, Newberry, S. C. The entire herd is MinRaltone-fed.

Noted Senn's Dairy Herd Protected Against

HIDDEN HUNGER*

W. E. Senn, owner of Senn's Dairy, grows his own grain — except for concentrates. He does his own milling and mixing on the farm — and he premixes MinRaltone, as well as allowing his prize Jersey herd free access to it. Mr. Senn has this to say about MinRaltone, "We've been feeding MinRaltone for about a year and a half. It's been a worthwhile investment for us because it insures that our stock won't lack essential minerals needed for health, production and reproduction."

What MinRaltone will do for one breed, it will do for all. Follow the lead of successful stockmen—feed MinRaltone regularly, year round. MinRaltone protects against Hidden Hunger* because it contains 11 essential mineral elements with Vitamin D. Write for free MinRaltone feeding booklet and complete details.

By J. F. "Doc" ROBERTS

ON MY recent trip around the Northeast attending a good many livestock auctions, two things stood out: First, I saw no threat of a surplus of cows, heifers, hogs, lambs or breeding sheep. Live-stock markets may work a little lower within the next few weeks (they usually do this time of year), but I think that will be temporary. The other thing is that the scrub, nondescript animal has pretty much disappeared and was noticeable by its absence.

While good-to-fair heifers were making money for everyone, poor heifers and the little stunted kind were not bringing the cost of producing them. The same thing was true of sheep, lambs, calves, and hogs, whether the hogs were sows or butchers.

The general improvement in our livestock, even for meat, has been outstanding in the last few years. It does not take long for this kind of a picture to bring about tremendous changes in an entire industry, and all of them good. Even now, slaughterers and packers in the Northeast want big-framed cows, even though they may be thin. This, you realize, is forced upon them whether they want it or not, because their competitors have that kind to sell. Thus the whole plane of cow and meat marketing is raised.

This raising of standards again brings out the importance of the farmer and what he does for our whole economy. This responsibility of the farmer himself is so often forgotten; for whatever he produces will be sold and that is what the public gets — whether good, bad or otherwise. Every one of these changes stems from the farmer, not from the public. I could go on with this by saying, for example, that the public is demanding better prepared meats only because some processors have produced better prepared meats from better cows, and the public likes them better.

Judging from the farmers I talked with, they are becoming more and more conscious of the position they hold in our present high-cost economy. Most all of them ask this question: "If consumers (whether from necessity or whims) get their food prices lower, why does the man who produces the food

stand all the break in price, while everyone in between from labor, processors, handlers to eventual sellers maintain their profits, salaries and incomes?"

When farmers begin asking this sort of question, something usually happens. While I couldn't answer the question, I could say that if they and many others kept asking it, then they and the others would develop the answer themselves. That is inevitable as long as this country remains free.

Then, of course, there is the usual question of the best breeds of cattle, sheep and hogs. This gets the honest answer that there is a "best breed" for every type of farm in every community, but not the same breed. The real problem, then, is to use the breed best suited to your conditions and to you. The Jerseys of Vermont do not belong in northern New York, and you'll notice that they are not there; yet they do seem suitable for Vermont. Pretty generally, the predominating breed in any community is the best breed for that community. Thousands of farmers are seldom wrong!

All in all, when you look back over the green fields, the woods, the homes, the new roads, the improved towns, and then get to know the rural people of New York and New England, you just cannot help but say, "God has been good to our Northeast."

Maple Lea Farm Holstein Sale

Fred & Vernon Long, Owners
Akron, Erie Co., New York
Monday, Nov. 6, 1950, at 1 p.m.

WHAT'S GONE BEFORE

"No Drums," a story of what happens to the home folks in time of war, started in the September 2 issue. It begins at the opening of the Civil War in a typical farm neighborhood in southern New York. Mark Wilson is in mental conflict about answering Abe Lincoln's call for volunteers and leaving his sweetheart Ann Clinton, a neighboring farm girl. At a party to which Mark takes Ann, Henry Bain, well-to-do and unscrupulous, tries with some success to get Ann away from Mark. A fight follows, Mark tells Ann what is what, and takes her home.

Finally, Mark decides that he must enlist immediately and marries Ann in a surprise dramatic ceremony in their little church before a large congregation at the close of the regular services.

CHAPTER IV

WITH the first dull light that crept in through the many-paned window of Ann's bedroom the next morning, Mark was awake. For a confused moment he wondered where he was, then all the happenings of the previous day came back in a rush, and a flood of tenderness swept over him as he turned to look at his wife's soft face on the pillow beside him.

Her cheeks were flushed with sleep and her long brown curly hair was braided like a little girl's. She was lying on her side, her head close against his shoulder, and her left arm flung across his chest as though she would hold him fast even in sleep. She looked very young and vulnerable lying there, and Mark felt protective as he gazed on her. Her apparent helplessness and confidence in him brought back some of the words of the wedding ceremony of the night before, and he inwardly renewed his vow to protect and save her from all evil.

And yet almost his first decision since they had taken their vows would hurt her immeasurably, for he had determined to enlist that very day.

His restless movement at this unhappy thought roused Ann. With a soft sigh, she opened her eyes, remembering instantly her new status in life. Mark raised himself on his elbow and brought his face close to hers, said, tenderly:

"I can't believe it. You're my wife, my girl for always. It's too good to be true. Such perfect happiness can't last."

"Yes, it can," she whispered. "It can last if we make it last." Then her arms came up around his neck, the sleeves of her heavy nightgown falling back to reveal her shapely arms, and she pulled his mouth down on hers. For a long moment they clung together, then Mark straightened up and looked at her gravely.

"What's the matter, Mark?" A smile perked the corners of her red mouth. "One would think it was painful."

But he continued to gaze at her sadly, and under that look she, too, grew grave, and repeated:

"What is the matter, Mark?"

He hesitated: "I was just thinking that maybe I shouldn't have married you, for now it makes it all the harder for me to go away."

"I know, Mark. But why worry about it right now? You haven't gone yet."

"Not yet." Then he blurted out:

"But I have to go today."

"Today! Oh, Mark!" she cried, stricken, pushing him away and sitting up in bed. "You mean you're going to leave me now?"

"Yes, dear," he replied. "There's a bunch from this part of the country leaving from Owego or Elmira in a few days and it would be easier to go with them than it would with strangers. And anyway we have to part sooner or later—and the sooner we all go, the quicker it'll be over and we'll be back."

Looking at his wife's white face, he took her in his arms.

"Oh, honey, don't take it so hard. I'll soon be back."

"Yes," she whispered brokenly, "but this is so terribly soon."

Then with a mighty effort she swallowed her disappointment, made a pathetic effort to smile, and murmured into his shoulder:

"It's all right, dear. You do what you think is best, and I'll do my part here at home."

"And that's the harder part," said Mark. "I guess that's what Father meant the other day when he said there were no drums on the home front."

They got up, dressed, and went downstairs to eat breakfast with her father and mother. The big farm kitchen was filled with the appetizing aroma of bacon sizzling in a spider on the back of the stove, coffee bubbling in the old pot, and buckwheat pancakes browning on the big griddle. Fred Clinton had just come in from his

morning chores.

The years of hard work had left their mark on Mrs. Clinton, but Mark, looking at her face pink with the heat as she bent over the fire, knew where Ann got her beauty. After the first little awkwardness among them wore off, Mrs. Clinton kept glancing from one young face to the other and finally said, with a little laugh:

"Why so solemn this morning? One would think you young folks had been to a funeral instead of to a wedding."

The quick tears sprang to Ann's eyes as she looked down at her plate. Her father stared at her in surprise and paused with a sizeable piece of pancake dripping with sirup halfway between his plate and his mouth.

"What's the matter, Toots?"

Mark answered for Ann.

"I hate to have to tell you folks, but I've just told Ann that I've got to leave today to enlist."

"So soon?" queried the mother, echoing her daughter's cry.

"Yes," said Mark, and went on to explain. "Maybe it was a mistake, but that was the reason I wanted to get married last night. I learned a few days ago that several of the young fellows I know have already enlisted and are waiting orders to go to the front any day now. It would be a lot easier if I go along with them. That's why I have to go so quickly."

Fred Clinton looked up from his plate:

"I can see that, son," he said, and Mark flushed with pleasure at the term of affection. "And I suppose the sooner you get away, the sooner you'll be back. He won't be gone long, Toots," he said to Ann. "We hope this'll be all over in a few weeks."

"Do your folks know you're going today?" inquired Mrs. Clinton.

"Yes, I told them yesterday when I told them about our getting married."

"How did they feel about your marriage?"

"They felt fine," he answered. "Mother said she had expected it and looked forward to it for years. I hope you're pleased, too," he added, a little wistfully.

Smiling gently at him, she said:

"We are. You're a good boy, Mark,

and we welcome you into the family."

They continued eating, but it was a mere pretense on Ann's part, and soon Mark said:

"If you'll excuse us now, I'll go over and get my stuff ready. Father's going to drive me to Owego." Turning to Ann, he said:

"Get your bonnet on, Ann, and come along."

"I will that," she cried, "but you'll have to wait until I change my clothes, for I'm going to Owego with you."

Halfway across the room, Mark turned and looked at her.

"Do you think you'd better, Ann? Parting down there will be harder than it is here."

She shook her head resolutely:

"What do you think I am—a child? I'm your wife, remember? I'm going to Owego to see you off."

Then, with a little smile, she added:

"If I can't get a wedding trip and a honeymoon one way, I'll get them another."

"As you say," he said, with a note of pride in his voice. Fred Clinton winked at his newly acquired son:

"I hope you didn't let that word 'obey' in the marriage service fool you any," he remarked. "When a woman makes up her mind, you may just as well save your breath."

At the Wilson's, Mark and Ann were warmly received. The chores were finished, breakfast was over, and Old Molly was harnessed to the buggy, blanketed, and tied to the hitching post by the horse block in front of the house. The whole family was gathered in the kitchen, except Mark's mother who, with her eyes unnaturally bright, was darting in and out of the kitchen and up the stairs that led to Mark's and the other boys' bedroom. At last she said, cheerfully:

"Your things are all ready, Mark."

But the rest of the family seemed subdued, even the usually noisy, obstreperous younger brothers. Traces of tears were evident on the face of ten-year-old Ellen. Elizabeth and Hattie, too young to understand much of what was wrong, sensed that something wasn't as usual and, play forgotten, sat quietly in a corner. Nancy broke the silence:

"I packed everything that I think you'll want in the old carpet bag, son."

As Mark thanked her, his father said:

"Well, if you're ready we might as well shove off. It's a long ways down there and back in a day."

Then Ann intervened:

"You don't have to go, Mr. Wilson. I'm going anyway, and if you can spare the horse until tomorrow and will trust her to me, I'll bring her back then."

George Wilson started to speak, then caught a look from his wife. Through the years he had learned to read her looks almost as well as if she had spoken, and now he realized that she was saying to him, "Let her go! It's their only chance to be alone." So he cleared his throat and, stuttering a little, said:

"W-w-well, I-I guess that will be the best way."

And now it was time to say goodby, but no one seemed to know how to start. Finally George strode across the room, and for the first time in Mark's memory his father put his arm across his shoulders, pulled him close in a great bear hug, then turned and almost ran outdoors. In turn Mark picked up Hattie, Elizabeth, and finally Ellen and kissed them, and then turned to look for the boys. But apparently they had had all they could take, for they were nowhere to be seen. Then Mark crossed the room to his mother. As he looked into her eyes sparkling with unshed tears, Mark was privileged to glimpse for a moment something of the unknown spiritual world that dwells in the heart and soul of a good mother.

SLIM AND SPUD

Pincher, the Hat Fitter

A Visit With the Editor

By E. R. EASTMAN

NOTHING in life is harder to bear than the ashes of regret. Few indeed are there among us who have not thought or said on hearing of the death of a friend, "I wish I had been more thoughtful and considerate!" No one can read his tombstone when he is dead!

So busy are young people with their own interests that, without meaning to be so, they are often thoughtless and inconsiderate in their relations with their parents. What a lot of additional happiness there would be in the world if these young folks could only realize before it is too late how much a word of appreciation means to father and mother. I have never seen this thought so well expressed as it is in the following letter, which was sent to me from some source unknown:

A SON'S LETTER TO HIS FATHER

Dear Dad,
I am writing this to you, though you have been dead thirty years.
From your seat in the Place Beyond I hope you can see these lines. I feel I must say some things to you, things I didn't know when I was a boy in your house, and things I was too stupid to say.
It's only now, after passing through the long, hard school of years; only now, when my own hair is gray, that I understand how you felt.
I must have been a bitter trial to you. I was such an ass. I believed my own petty wisdom, and I know how ridiculous it was, compared to that calm, ripe, wholesome wisdom of yours.
Most of all, I want to confess my worst

sin against you. It was the feeling I had that you "did not understand."
When I look back over it now, I know that you did understand. You understood me better than I did myself. Your wisdom flowed around mine like the ocean around an island.
And how patient you were with me! How full of long suffering and kindness. And how pathetic, it now comes home to me, were your efforts to get close to me, to win my confidence, to be my pal!
I wouldn't let you. I couldn't. What was it held me aloof? I don't know. But it was tragic—that wall that rises between a boy and his father, and their frantic attempts to see through it and climb over it.

I wish you were here now, across the table from me, just for an hour, so that I could tell you there's no wall anymore; I understand you now, Dad, and how I love you and wish I could go back and be your boy again.
I know now how I could make you happy every day. I know how you felt.
Well, it won't be long, Dad, till I am over and I believe you'll be the first to take me by the hand and help me up the further slope.
And I'll put in the first thousand years or so making you realize that not one pang or yearning you spent on me was wasted. It took a good many years for this prodigal son — and all sons are in a measure prodigal — to come to himself, but I've come, I see it all now.

I know that the richest, most priceless thing on earth, and the thing least understood, is that mighty love and tenderness and craving to help which a father feels toward his boy. For I have a boy of my own.
And it is he that makes me want to go back to you, and get down on my knees to you.
Up there somewhere in the Silence, hear me, Dad, and believe me.

NO DRUMS

(Continued from Opposite Page)

She only said, "Be good, Son," and reached up and kissed him. Then she turned and went quickly into her bedroom and shut the door. But after Mark had helped Ann into the buggy, picked up the reins, and turned to look back at the house, there they were—George, Nancy, his brothers and sisters, all on the old front stoop, waving at them, and both brothers sticking out their tongues at him.

As the old horse jogged along, Mark and Ann, subdued and saddened by the parting, had little to say for a while. But by the time they had passed through Jenkstown and were on their way down the valley road toward Newark Valley, the spring morning, their youth, and their wonderful new relationship combined to change their mood. The pasture and meadow lands had begun to show carpets of tender green, the sun warmed their knees under the buggy top, and from almost every fence rail and tree the birds sang loud praise of the spring.

Looking at the glowing face of his bride peeking up at him from under her bonnet Mark was filled again with a surge of pride and tenderness as he thought, "She's mine!" Then he smiled at the memory of how positively that independent little creature beside him had affirmed her intention of accompanying him to Owego. "Not all mine," he thought. "She still has a soul of her own. But she's my wife just the same." Aloud he said:

"Well, Mrs. Wilson. How do you like the sound of your new name? Is it good enough to carry all the rest of

your life?"

"I'm proud of it," she answered, her face lighting. "And I'm proud of you, Mark. I always have been." With a twinkle in her eyes, she added: "Even as a little girl when you and I used to play at keeping house with the other children, I used to plan that some time I'd make ours real."

"Oho!" he said. "So I never had a chance! I thought it was the man who did the proposing."

"That's what men think," she said, grinning. "But the truth is that when a girl makes up her mind—"

"The boy might just as well throw up his hands," Mark finished the sentence for her. Then added:

"But you just wait until I get back home, my dear, and I'll show you who's boss."

Bending his head he kissed the soft mouth upturned to his. Old Molly, feeling the slack on the rein and knowing herself forgotten, turned sideways, stopped, and started to crop the short grass by the roadside. Some time later, Mark, a little breathless, picked up the lines from the dashboard, pulled the horse back on to the road and said, huskily:

"Words don't count for much beside that, do they, dear?"

"They don't," she agreed, "and I hope if we ever start any arguments that we can always settle them that way."

As they ambled along down the valley the horse picked her own way while Mark held his bride close to his side. As they rode they played a little game to see which one could remember and name the owners of the farms they passed, and between them they could recall almost everyone along the way from their home to Owego. Among them were the Lynchs, the Royces, the Browns, the Muzzeyes, the Balls, the Beebes, the Ames, the Johnsons, and the Japhets, descendants of the Yankee settlers who had transplanted New England to the whole length of the valley, as those same Yankees had carried their names and their standards to thousands of other pioneer communities across the country.

(To be continued)

Buy Now For Christmas Giving

E. R. Eastman's latest and best book

THE SETTLERS is the perfect Christmas gift for everyone on your Christmas list, young and old. It's both a grand love story and a thrilling tale of adventure in pioneer times. In it you'll meet

- Lovely, unselfish Hannah Williams.
- Young Dr. Jim whom everyone adored.
- Asa and Martha whose love affair took a stormy course.
- Tempestuous Polly Stevens whose beauty stole men's hearts and aroused the jealousy of other women.
- Villainous Henry Kingman.
- Charles Carson, handsome and treacherous.
- Motherly Constant Williams who found tragedy in the new land.

Reviewers say: "The book is based on historically accurate records and is one more important addition to the ever growing Epic of America."

Bound in green and gold, with a colorful jacket designed by Al Coleman, this is a book you'll be proud to own and proud to give.

City Visitor: "Here Boy!"

Christmas Gifts

By MABEL HEBEL

ONLY NINE more weeks to Christmas, but time enough to knit, crochet, sew, or embroider the lovely, useful gifts shown on this page and page 20. Easy-to-make aprons, mittens, socks, doilies, dolls, doll clothes, bean bags, sweaters, cute dresses—they're all here for you to choose from.

Paper Patterns for Nos. 3086, 2032, 2945, 3528, 214, 220, 2031, 216, and 2323 (lower half of this page) are 20 cents each, and should be ordered from this address: American Agriculturist Pattern Service, Box 42, Station O, New York 11, N. Y.

All other numbers on this page and page 20 should be ordered from Needlework Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Nos. 799 and E 952 are 15 cents each. Instructions sheets for Nos. PK 5597, K 115, PK 5411, PC 4517, PK 4785, PK 5842, are 3 cents each. Send coins, check or money order. No stamps please.

Aprons always make good gifts. Besides being gay looking, they're as easy as ABC to sew. No. 3086 takes but one yard of goods, and has shell shape pockets and dainty edging to enhance it.

Under the heading of something special comes the cover-all apron No. 2323, with clever pumpkin shape pot-holders to match the pockets.

A smart Santa Claus suggestion for little sister is the Dutch styled hat No. 2032, with warm mittens and roomy drawstring bag to match. Note the pretty applique accent.

No. 3528 cuts a complete new wardrobe for a favorite doll. All the clothes are easily made and smartly styled.

Rag doll No. 214 is especially stunning because it is extra tall (35 inches) and because it has its own dress and panties. This dolly will thrill any little girl.

No. 220 makes colorful, cuddlesome dolls from men's and children's stockings. They are as much fun to fashion as they are to receive.

The pleated look all little girls love is the feature of simulated bolero dress No. 2945. Panties to match are included in the pattern.

Breakfast coat No. 2031 is crisp and tidy, smartly detailed with two big pockets and deep revers treatment, and it can do double duty as a housedress.

Ten easily made bean bags are included in No. 216. They make bright, durable toys and are designed in the shape of children's favorite animals and fish. You can use left-over fabrics and run them up quickly on your machine.

A knitted gift that will delight any "young lady" is classic pullover PK 5597, with a cable-like pattern throughout.

Dad, brother, or your best beau would love a pair of

Happy Is The Day When Backache Goes Away

As we get older, stress and strain, over-exertion, excessive smoking or exposure to cold sometimes slows down kidney function. This may lead many folks to complain of nagging backache, loss of pep and energy, headaches and dizziness. Getting up nights or frequent passages may result from minor bladder irritations due to cold, dampness or dietary indiscretions.

If your discomforts are due to these causes, don't wait, try Doan's Pills, a mild diuretic. Used successfully by millions for over 50 years. While these symptoms may often otherwise occur, it's amazing how many times Doan's give happy relief—help the 15 miles of kidney tubes and filters flush out waste. Get Doan's Pills today!

CHRISTMAS GIFTS
(Continued from Page 18)

smart, striped, handknit socks like K-115, knitted in soft Chadwick's Red Heart Sock and Sweater Yarn in easy stockinette stitch and ribbing. Directions come in sizes 9 to 12.

Matching anklets and mittens make a serviceable Christmas gift for a youngster. Set PK 5411 is knitted in white wool in stockinette stitch with rib stitch tops. For trim there's a crocheted chain of contrasting color.

Give baby the soft cuddly doll PC 4517, all dressed for cold weather. Simple crochet stitches and trimmed with embroidery.

Boys of all ages will go for warm wool knitted hat and mitten set PK 4785. And it's quick and inexpensive to make.

Baby Set PK 5842—sacque, bonnet, mitts, and booties—would be a wonderful gift for the new baby. It's knitted in stockinette, garter, and cable stitches with soft little pompons on the ends of the ties.

799
E 952

For beautiful gift linens, there's nothing prettier than floral initials embroidered on towels, pillowcases, etc. Hot Iron Transfer pattern No. 799 contains a set of initials about 2½ inches high with complete instructions.

Pattern E-952 is a three-in-one Christmas gift! Three beautiful crocheted doilies—a circular one with scalloped edge; an oblong one with a spiderweb center and picot mesh edging; and a round pineapple design—all worked in simple stitches. See illustration top next column.

PATTERN SIZES and REQUIREMENTS

(Order the following patterns from American Agriculturist Pattern Service, Box 42, Station O, New York 11, N. Y. Print name, address, number and size of pattern, and enclose 20 cents for each pattern wanted. Add 20 cents for a copy of our attractive Fall-Winter Fashion Book, filled with patterns for all ages and occasions, and more gift ideas.)

No. 3086—one size, 1 yard 36-in. with 3¼ yards edging. 20 cents.

No. 2032—head sizes 19-22. Size 22, ¾ yard 54-in. for hat, mittens and bag. Applique included. 20 cents.

No. 2945—1, 2, 4, 6; size 4 dress, 1½ yds. 35-in., 1½ yds. ruffling; panties, ¾ yd. 35-in. 20 cents.

No. 3528—order by size for 14, 16, 18, 20, and 22 inch dolls. See pattern for fabric requirements. 20 cents.

No. 214—one size, 35-in. tall. Doll, 1½ yards 35-in.; dress, 1¼ yds. 35-in.; panties, ¾ yd. 35-in. 20 cents.

No. 220—smaller doll is made from child's sock size 7, plus ¾ yd. 32-in. for skirt, 1 yard green and 1 yard blue ribbon. Large-

er doll is made from men's sock size 11, with ¼ yd. 35-in. for skirt, ¾ yd. pink and ¾ yd. purple ribbon. 20 cents.

No. 2031—12-20; 36-44. Size 18, 4¼ yds. 35-in., 3½ yds. trimming. 20 cents.

No. 216—finished size of animals averages 5 to 7 inches. No bean bag requires more than two 8-in. squares of fabric. 20 cents.

No. 2323—small, medium, large, extra large. Medium, 2½ yds. 35-in., 1 yd. 35-in. contrasting; pot holders, ¾ yard 35-in.; binding, 5½ yd.; stems, ½ yd. 27-in. green fabric. 20 cents.

NEEDLEWORK INSTRUCTIONS

(Order the following needlework patterns from Needlework Dept., American

COME WALK WITH ME
By Edith Shaw Butler

Oh come with me for bittersweet,
Now leaves are red and falling.
Across the Autumn fields and hills,
The Autumn winds are calling.

Come walk a woodland path with me,
The work will keep, I say,
And surely God has never made
A brighter Autumn day.

Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Print name, address, numbers and names of patterns desired, and enclose payment in coins, check, or money order. Add 15 cents for copy of our Needlework Book containing 24 pages of inexpensive gift ideas (crocheted, knitted, embroidered), including instructions for ten of the designs in the book. A good book to have on hand!)

No. PK5597—girl's knitted pullover. 3 cents.

No. K115—men's striped knitted socks. 3 cents.

No. PK5411—knitted anklets and mittens. 3 cents.

No. PC4517—cuddly doll. 3 cents.

No. PK4785—boy's hat and mitten set. 3 cents.

No. PK5842—baby set of sacque, bonnet, mitts and booties. 3 cents.

Hot Iron Transfer Pattern No. 799—floral initials. 15 cents.

No. E-952—three crocheted doilies. 15 cents.

PROTECT THOSE BUTTONS

Fancy buttons on dresses and shirts should be protected while ironing. Fold a Turkish towel at least three times and lay it or pin it on the ironing board where the buttons will go. Iron the garments on the wrong side so that the buttons will sink into the several thicknesses of towel and not be broken or damaged.—B. C.

GOING TO CALIFORNIA THIS FALL OR WINTER?

Verne BeDell, Northern Pacific travel counselor—well-known to thousands of Agriculturist readers—can help you.

See The Land o' Lakes • The Badlands
The Rockies • The Cascades • Puget Sound • Great Farms of the West!

It's the vacation of a lifetime! Visit California—see the great Pacific Northwest on the way. Verne BeDell will answer all your questions, make sure that you get the best of service and fine accommodations. And you'll travel in real luxury on NP's finest train—the streamlined *North Coast Limited*. Want to know more? Your inquiry will be welcome.

WANTED—Your Opinion

A GAIN THIS YEAR, the Annual Forum issue of *American Agriculturist* will be dedicated to the most important issue facing America—how to keep America free and strong. We want to hear from our women readers on how they are meeting this challenge.

We began our questioning of women this morning in our own *American Agriculturist* offices and had a very lively discussion. We asked several of the girls working here (some married, some not) their opinion about problems of the day that affect them personally.

"What are your worries?" we asked one mother who has a boy of 17 just starting college.

"Well," she said, slowly, "I worry for fear our boy will be drafted, and I worry for fear we won't be able to finance his college education, now that taxes and living costs are higher and higher."

When we asked her what she was doing about the high cost of living, she said, "I'm buying only what I have to have." Then she added, "I think that 'keeping up with the Jones' is a thing of the past. There are lots of things we can get along without that we used to think we had to have."

Another mother agreed with her, but added: "I'd feel a lot better about high taxes if the government didn't waste so much money."

We talked about a lot of things that are in the back of everybody's mind these days: the boys in Korea, the possibility of a third World War and atom bombing, the danger of runaway inflation, and homey things like maybe we could help America to keep free and strong if we talked more about fundamental values and democratic principles in our own homes and with our neighbors—instead of trivial things all the time; if we took the trouble to find out more about election issues and the candidates, and then voted intelligently; if we let our Congressmen know our views; if we went to school meetings and took part in them; if we taught our children to think of the other fellow; if we were more unselfish; if we returned to the good old American belief that hard work never hurt anybody; if we were less dependent on the government, and more dependent

on God.

"There's too much drinking among young people in this country. We need to raise moral standards."

"The government takes one day's pay out of my week's check, but I'd rather give it than live one hour in some of those European countries where people can't call their souls their own. At the same time, I don't want the government to waste my hard-earned money in foolish spending!"

"There's something wrong when a person can turn down a good job and then go and collect unemployment insurance."

Well, there were many more comments by the women we talked to. We really got worked up about the problem facing America today—and it felt good to get worked up about them. And now we want you—our women readers—to tell us what you think about some of these important issues affecting you and your family and your country.

Write us a letter. Address it to Mabel Hebel, Home Editor, *American Agriculturist*, Box 367, Ithaca, New York. We will print the best letters in our Third Annual Forum Issue in December. Your name will be signed to your letter unless you ask us to withhold it. The time is short, so if you want to take this opportunity to express your ideas, mail your letter as soon as possible—not later than October 30.

—A.A.—

PARSLEY THE YEAR ROUND

I have lived many places where I couldn't have a pot of parsley growing on the window sill and where it couldn't be bought in the stores. Here is how I solved my problem because I use it so frequently in cooking.

I take an ordinary sponge that I buy at the dime store, dip it in warm water and squeeze out the surplus. Then I sprinkle parsley seeds over it and keep it in a damp and warm spot. But I have to be patient, for parsley seeds are tiny and take a long time to germinate.—B.C.

—A.A.—

To mold cornmeal mush quickly, I cut out the bottom of an empty baking powder can, a one-pound one. I pack my mush into this, and it slides out easily when it is set. This makes slices of the right size and no trouble to unmold.—B.C.

4-H GIRLS ON PARADE

Pretty girls dressed in pretty costumes made by themselves were plentiful at the annual New York State 4-H Club dress revue, making it difficult for the judges to pick winners. Shown in the picture (left to right) are the State winner, Miss Dorothy Dean of Marion, N. Y., and Miss Marion Poyer of Ithaca, N. Y., alternate. Miss Dean, who wears a dance frock of red moire taffeta, will receive an all-expense trip to Chicago next December, to attend the annual National 4-H Club Congress. If she is unable to go, Miss Poyer will get the trip. Miss Poyer's dress is navy sheer. Her butterfly corsage is made of gladiolus petals.

KERNELS, SCREENINGS and CHAFF

SUNNYGABLES NOTES

By John Babcock

"IF YOU OWN IT, USE IT"

BACK in September we were playing that old game: "How to get more income on the farm." Figuring depreciation and a return on investment, it's costing Boots about \$5.00 a day just to own the machinery and equipment on his farm.

It irked us to see the big tractor sitting on the barn floor doing nothing at all. We were paying roughly 75¢ a day just to park it there and look at it. I remarked to Boots that it was costing us about as much to leave the tractor in his barn as it would to park a car in a big city parking lot.

Out of the conversation we decided on a schedule to keep that big tractor rolling as much of the year as possible. Boots took on some custom silo filling, and he plans to skid out his own lumber this winter. Those activities will not end our fixed overhead of 75¢ a day on the tractor, but we'll be making it pay its way and then some.

In general, our outlook on all equipment and machinery is: "If you own it, use it."

FALL PASTURE FALLS SHORT

A fellow really sticks his head out around these parts when he starts making statements about the nutritional value of pasture legumes and grasses. With the Cornell School of Nutrition and the New York State College of Agriculture so close, many answers are available. In fact, their work, from feeding trials to test tubes, has done as much to re-shape our whole forage management and feeding program as our own observations.

There is one marvel of nutrition, though, that I can find no answer to on a "how and why" basis. To me it is as deep a secret as the mechanics of photosynthesis or the processes in the cow's rumen.

Each spring, Nature seems to put some particular kind of a punch in early grass that is not again duplicated during the year. From their early grazing, cows take a new lease on life, regardless of the quality of the feed they have been getting during the feeding season. The spring flush in production, appearance and behavior of a milking cow is some-

thing we can't capture at any other time of the year.

By that same token, fall grazing seems to lack that special something that makes cows blossom out and thrive. I've often thought that the comparative production per cow and the fat percentage drop because there just isn't enough to eat on fall pasture. This year, though, we carried through the fall with plenty of good grass-legume pasture of about the same mixture provided in the spring. Yet, from what looked like plenty of good grazing, the cows turned readily to good hay and more grain. And butterfat content of the milk dropped

better than 25 percent on some apparently thrifty, well-fed individuals.

To me, this is an indication that fall grazing, even when plentiful, lacks some punch we can't measure. I feel sure it is a hidden production factor that does not show up through chemical analysis alone.

Whether the slanting sun just doesn't give the growing forage enough of its mysterious powers . . . whether the cow's appetite for fall pasture is dulled by a full season of grazing . . . or whether we're overestimating the amount of feed we think they can graze easily, I don't know.

In my mind, it's just another of Nature's secrets that we haven't gotten to the bottom of yet. Perhaps we can get around the problem by feeding grass silage with fall pasture—spring grass silage.

CLEAN COWS KEEP CLEAN

The paved alley leading out of Jack's milking parlor to the feeding floor is inconvenient to clean. In addition, Jack tried to discourage the cows from loitering in the narrow alley to prevent a bottleneck while he is running cows through the parlor at milking time.

The best solution he has found is to sweep the exit clean, and then spread white superphosphate on the surface. Whether cows respect the effort at

cleanliness, or whether they feel uncomfortable standing on the spic and span floor, I don't know. If the area is cleaned up of foot prints and tracked-in straw and manure after each milking, the cows tend to keep it clean. If we forget to clean it just once, the place is a hopeless mess by the end of the next chore period.

This observation further leads us to leaving the actual feeding and watering area just a little wet and dirty. The practice tends to encourage manure and water accumulation where it is easiest cleaned up with a tractor and scraper. Of course this saves bedding. Cows don't mind standing on a messy concrete strip, and never try to lie down if there is plenty of clean straw in the "bedroom."

RAISED THE ROOF

At Sunnygables, we have lumber, concrete and steel buildings that are far more than adequate for our limited acreage. They are tremendously useful, and planned with great foresight. Though they were built at a nominal cost during the depression, it would be fantastic to attempt to replace them as they are.

While I was helping revamp our barns and install two pen stables and milking parlors here and at Boots' place, I had a good chance to think a lot about what I would build if I started from scratch. During the year I

➔ To avoid expense of idle machinery, Boots Poelvoorde is keeping some of his busy with custom work this fall. He's shown here with the last load of corn he field-chopped for neighbor Frank Blovisky, Jr.

➔ "Smitty" is living on borrowed time—borrowed from the pen stable. 10 years old, she's the pet of Boots' herd, and one of the most valuable cows. Maybe you can see the strongly feminine dairy type she reflects despite her knocked-down hip, grotesque udder, and a top line that falls off like a corn crib roof.

She's head nurse in Boots' milking herd, cheerfully alternating between carrying two to three calves and working in the milking string proper. She milks off every extra pound of flesh and is almost impossible to dry off when she is due to freshen again. Her breeding is roughly half Guernsey and half Holstein.

How long would "Smitty" have stood up—mastitis free—in a conventional milking stable? —Photos: C. Hadley Smith

farmed in Southern Ohio, I had a chance to build a pen stable, starting from scratch. As I drew and discarded plans, I was looking for the cheapest way to put up a barn. With all the help I could muster, I found a good many ways to cut costs. Finally, though, a point was reached where costs could be cut no more.

BOTTOM TO TOP

Midwest or Northeast, every barn needs a good roof. That is the last place you can skip on costs. And every barn needs a suitable, long-lasting foundation. Of these two, roofing is by far the lion's share of expense, and is the most expensive item in the bill of materials.

Working from those two absolutely necessary costs—a good footing and a durable roof—we finally agreed on an acceptable open, or cold pen, dairy set-up. The building will resemble an airplane hangar more than a Pennsylvania Dutch barn. I am confident that in it we can produce healthy cows and high grade milk.

When the building is completed, I shall run a picture of the Ohio dairy on this page. You'll see we bought the roofing necessary for a long-lasting building, and literally raised the roof—the cheapest way possible.

CRAINE-NATCO TILE Your Best Investment

If you value permanent, trouble-free service, you'll find a Craine-Natco tile block silo the best buy you ever made.

Each tile unit contains the maximum number of air cells, for better insulation. They're unharmed by silage acids . . . glazed for a striking beauty that lasts! You'll get more for your silo dollar, in a Natco.

Craine, Inc., 1020 Pine St., Norwich, N. Y.

CRAINE SILOS

Service Bureau

By H. L. COSLINE

BARN PAINTERS

Still active in the Northeast are occasional barn-painting gangs who make glowing statements and give out worthless guarantees on work that is poorly done with inferior paints or paint substitutes.

In the August 5 issue we ran an item about the experience of a subscriber with such an outfit, and as a result had a letter from another reader about the same gang. The name was the same in each case, but the address was different. One of the addresses given was a false one as there is no such street in that city, and no doubt the other was also a "phony."

The Service Bureau has forwarded information about these painters to the New York State Troopers. If they turn up in your neighborhood, be sure to notify the nearest State Police Barracks. And to be on the safe side, why not have your farm and home improvement done by local contractors you know to be reliable?

— A. A. —

NO MISREPRESENTATION

About two weeks ago a plane passed very low over our buildings. Last night a man arrived with a picture of the farm buildings taken from the air. My husband paid him \$5 for this picture. On second thought, we feel the picture isn't worth that much and would like to get our money back. Did he have a right to take such a picture without permission from us?

So far as we know, there is nothing to prevent anyone from taking aerial photographs of this sort, except over restricted government areas. Since the picture was seen before it was bought, I can see no way of proving misrepresentation. It must be remembered that not only are photographic materials involved in aerial pictures, but the expense of the plane as well. Certainly no one could hire such a picture taken for \$5.

— A. A. —

PROOF OF PAYMENT

Some time ago, I sent a check to a concern for nursery stock which I have never received. Could you help me?

On checking with the nursery, we found they had no record of the order. However, since we had the cancelled check in our files, they refunded the money in full. It is a good idea when ordering any merchandise, even from a firm you know to be entirely reliable, to keep proof of payment sent, such as money-order stub, postal note stub or cancelled check. You cannot prove payment if you send cash through the mail.

— A. A. —

WRONG POSE

I ordered some pictures of my son from a man who came through this section. When they came, they showed him in a different pose than I ordered from the proofs. I checked with the studio and was advised that the rest of the negatives had burned in a fire they had. I am not satisfied with the pictures. What can be done?

We wrote to the studio, sympathized with them in their loss through fire, and pointed out that our subscriber should not have to pay for pictures she did not order. They came through with a refund of \$16.90.

— A. A. —

A check in payment for a letter about controlling woodchucks was addressed to Stoddard Porter of Ellenville, N. Y. The Post Office returned it marked "unknown." We will be glad to see that Mr. Porter gets this check if he or someone can tell us his correct address. Write to Service Bureau, Box 367, Ithaca, N. Y.

Spreads Its Cost Over Lots More Years

that's why a **NEW IDEA** is a good idea!

No. 12 A Tractor Drawn
90 Bu. Capacity

No. 14 A Tractor Drawn
60 Bu. Capacity

No. 10 A Team Tractor
70 Bu. Capacity

Run your eyes over the trimly rugged construction of a NEW IDEA Spreader—stem to stern and top to bottom. Test the solid strength of its well balanced, free-rolling running gear. Try to budge that stoutly anchored bed of fine, specially treated pine. Get the feel of its handy, smooth-working controls. Note that every part is extra-sturdy, easy to get at, snugly fitted. You'll agree that a NEW IDEA Spreader looks good for longer, lowest-cost service.

And you'll find that a NEW IDEA more than lives up to its looks! Compare load capacity, thoroughness of shredding, width and uniformity of spreading. Watch it being hitched in a jiffy, loaded high in a hurry . . . wheeled onto the field with a heavier pay load of manure . . . moving right along over roughest ground with never a sign of drag. Ask long-time owners for figures on upkeep. Then, you'll hardly settle for less than a NEW IDEA Spreader offers. And your NEW IDEA dealer offers a model to meet your exact needs. See him soon. **Here's the car that's rugged for work—
good looking for keeps!**

The Styleline De Luxe 2-Door Sedan

YES, Chevrolet is *your* kind of car! It's rugged—built for the round-the-clock, day-in-and-day-out service you want and need in the car you buy.

Working around the farm or taking your family to town, you'll be *proud* of your Chevrolet. It has the power and stamina to *do* the work, and to *keep* doing the work . . . over all kinds of roads, in all kinds of weather, through season after season.

You'll be proud, too, of the *looks* of your Chevrolet, and the way its good looks *last*. The beauty is built in. Every Styleline and Fleetline model has a distinctive, practical styling—inside and out—that gives you big-car comfort, plenty of leg-room, and a truly smooth ride!

And remember: You get all this in the *economical* Chevrolet. The car with the Valve-in-Head engine so famous for operating economy . . . and even more famous for low maintenance costs. Let your Chevrolet dealer tell you more . . . why not see him soon!

CHEVROLET MOTOR DIVISION, General Motors Corporation, DETROIT 2, MICHIGAN

FIRST...and Finest...at Lowest Cost!

MORE SAFETY! You see where you're going, and like it, in Chevrolet. The wide curved windshield and large window area mean extra vision at curves, corners and in traffic. And Center-Point steering with Unitized Knee-Action ride, airplane-type shock absorbers and wider tread tires assure a smoother, road-hugging ride.

MORE POWER! Grades are no problem for the powerful Chevrolet. You have a choice of two drives—Powerglide automatic transmission* with the new 105-h.p. Valve-in-Head engine, or the Synchro-Mesh transmission with the improved standard Valve-in-Head engine. Both are equal to any road . . . hold car upkeep way down!

*Optional on De Luxe models at extra cost.

MORE ROOM! You're free to relax and enjoy the uncrowded luxury of spacious "five-foot seats" in your new Chevrolet. And you'll appreciate Chevrolet's roomy trunk to take care of supplies. Just the turn of a key and the trunk pops open.

MORE STYLE! You'll get a thrill every time you see the sleek good looks of your Chevrolet. And it's a thrill you'll get over and over . . . Chevrolet has the kind of styling that lasts. Fourteen smart Styleline and Fleetline models to choose from—in a wide variety of color combinations.

LOW PRICE! Examine all the features of the Chevrolet. Then examine Chevrolet prices . . . and discover that Chevrolet is the lowest priced line in the low-price field! That's another reason why Chevrolet is America's No. 1 favorite, year after year . . . why you're bound to win with Chevrolet!

AMERICAN AGRICULTURIST

FOUNDED 1842

THE FARM PAPER OF THE NORTHEAST

Does Your LIME SHOW?

By SAMUEL ALDRICH

THE ACID soils of the Northeast can be farmed in two ways, with lime and without lime. Under the two systems the hay meadows, corn fields, cows in the herd, and even the barns and houses usually look quite different. In the one case, the chances are fair that the farmer has a good car in his garage, a home freezer in his basement, an automatic clothes washer, and modern plumbing throughout his house to make life happier for him and his family. In the other case, things don't look so good. The whole farm seems run down, and the farmer is "down in the mouth."

Can lime possibly make the difference between these two farms? It certainly can! Compare the kind of crops they grow. On the farm that uses enough lime (together with other fertility needed) the meadows are rich in legumes. The corn is taller, greener, more heavily eared because of the nitrogen in the organic matter of the legume sod that was plowed under. The oats yield more because some of the organic matter from the legume is still left after the corn crop is off. The summer pasture problem is partly licked with the aftermath from the legume meadows. With good hay and good pasture the heifers grow to be bigger cows than with poorer feed. Big cows, within a breed, make milk more efficiently than small ones. Is there any doubt in your mind about the general well-being of the family on this farm?

Now look at the neighboring farm where lime isn't used. The new meadows have a fair smattering of alsike and perhaps a little red clover. Two-year-old meadows are mostly timothy and redtop. The following year golden rod, white top, paint brush, chicory, daisies, and other equally valueless plants start to come in to supplement the grasses that are weak and thin from lack of nitrogen. A few loads of manure helps, but manure doesn't kill the weeds. After a few years of this, the field is plowed for corn. Naturally the corn is rather slow in getting started, so the weeds have a good chance to grow. By midsummer the corn leaves begin to turn yellow from lack of nitrogen aggravated by the competing weeds. The next year the oats are thin and short and weedy. Midsummer pasture is a real problem because timothy and weeds don't supply much aftermath grazing. It's no wonder the fences need fixing. Hungry cows get desperate. You can pick out this farm from a distance because of its general rundown appearance and unpainted buildings.

Clover needs lime. Nodules grow on clover roots and the bacteria in them fix nitrogen from the air.

There really are farms like these, plenty of them, in New York and the Northeast. Perhaps it's worth while to look at our lime account, and see what the balance is

Limestone Soils

Many people have the mistaken notion that the soils in northeastern United States were abundantly rich to begin with. That isn't true with respect to lime. Most of our soils developed from rocks that were ground up by the glacier and then plastered on the surface as the ice moved along. Some washed out in the streams or dropped to the bottom of lakes. Where the limestone rock was exposed, the glacier ground it up and left some of it mixed in the soil material. Soils developed from rocks, including limestone, are scattered throughout the northeastern states. In New York, for example, the soils with lime in them are those just south of limestone rock outcrops.

The dark areas on map, page 13, represent soils in New York that contain enough lime to affect lime recommendations. Besides those shown, the limestone soils extend slightly farther south in the valleys due to the fact that the streams flowed south when the glacier stood across the central and northern parts of the State.

On farms outside the so-called limestone areas where lime has not been applied in the past, no soil test is needed to show that lime

Trucks get lime to the farm speedily, and lime spreaders put it on the land without delay.

should be added. Those soils never were rich in lime. You may want your soil tested to show you when to cut your rate of liming from 2 tons to 1 ton, after you have limed each field two or three times. But you don't need the test to tell you when to start.

If you live in one of the limestone areas on the map or a similar area in any northeastern state you need a soil test or the opinion of your county agent or some other qualified person to tell you whether or not you need lime. This is due to the fact that water, washing through the soil for thousands of years, has gradually leached the available lime out of the surface of some soils. Where the surface soil is acid, you need some lime to get legumes started. Once they get a start, the roots may penetrate to the lime in the subsoil if it is not too deep and there is no hardpan.

In some soils within these areas, the lime hasn't reached out. There is no reason for you to buy lime for such soils. The money can better be spent for other purposes.

Lime Used

In New York for the past ten years the lime tonnage dropped in 1947 and 1948, two good years for dairymen. The most lime, 910,000 tons, was used in 1946. Careful esti-

That Good G.L.F. Seed

EACH YEAR about this time, farmers by the tens of thousands place their orders for G.L.F. Seed. It is a custom of almost thirty years standing, and one that has proved profitable for farmers of this region.

These early orders enable your service agency to estimate accurately the requirements of the community, and to protect these needs in his order to the G.L.F. Wholesale Seed Department. When the orders from all the territory are brought together, the wholesale buyers can check them against their supplies, and if they are short on any particular seed, order more of it immediately before the spring rush begins.

This cooperative system of seed buying not only protects farmers on price and supply, but has enabled G.L.F. to build over the years a seed service which is a by-word for quality.

G.L.F. probably makes the best, most extensive and thorough private seed crop surveys in the United States. The buyers are well equipped with information as to probable production and its effect on prices. Buyers

located at key seed production points spend their entire time contacting farmer producers and local dealers and working with contract seed growers. The volume which is assured by a substantial block of early orders enables G.L.F. to accumulate seed at car-load lots at local points, and move it east at lowest freight costs. Modern cleaning and processing equipment located both in seed producing areas and in the east assures clean and properly treated seed.

All this adds up to a seed service which, year in and year out, delivers quality seed at reasonable cost to the farmers who use and own the service.

The seed order you place now is not binding upon you. You may make changes later if your plans change. So place your order now with your G.L.F. Service Agency and be assured of your supply of G. L. F. quality seed next spring.

TIME TO ORDER G.L.F. Quality Seed**

What Do YOU Think?

By JIM HALL

IVAN W. BIGALOW, district agricultural engineer at the New York State College of Agriculture, has been working with area farmers on their barn construction problems for several years. He says that costs and uncertain milk prices have focused many farmers' attention on the possibilities of using pole type construction when expansion of barn space becomes necessary.

Ivan says it is unprofitable to keep cows in the cramped quarters common to many old dairy stables and also that it is economically unwise to go far into debt for construction during these uncertain times. In the following article he has set forth his reasons why he thinks the answer lies in converting old, inefficient barns to pen stables and then using pole construction for additional space needed. I'd like to know what you think of his suggestions.

REMODELING BARNs WITH POLE TYPE CONSTRUCTION

By Ivan W. Bigalow

ONE answer to the economic problem that faces many farmers when they want to expand their herds, or provide present ones with more space to cut down injury and mastitis, lies in converting to pen stabling and using pole construction for additions.

If you prefer a conventional stable, it is often wiser to build a new barn rather than spend great sums of money trying to construct a new enlarged stable within an old, narrow, inefficient barn. However, this old barn may be used for many years as a paved feeding area and probably has enough room to provide space for a modern milking parlor adjoining the milkhouse.

To make the conversion, stanchions and stalls are removed, gutters filled in and the floor levelled with concrete or blacktop to facilitate scraper-cleaning. Feed bunks below hay chutes along the outside walls and silage bunks in front of the silage chute door represent real labor-savers. In some conversions, it may be more efficient to use a wagon with built-on feeders that can be filled near the silo and drawn onto the paved area. Insulated water cups or a water tub may be left in the feed area and the new "dining room" is ready.

Some farmers, in switching to pen stabling, keep a few stanchions to use during milking, but most of them are installing the more efficient parlors

with elevated stalls to eliminate the squats and bends in milking. With grain being fed in the milking parlor, it takes only a short time to train cows to the system. In a well-arranged milking parlor, one man can feed and milk about 25 cows an hour.

With the old barn converted to an efficient feeding and milking area, two main parts of a well-rounded pen set-up have to be constructed: The loafing area which should provide at least 70 square feet of bedded area per cow, and a paved area outside the barn where cows have access to supplemental hay bunks.

It's in adding this loafing area that construction costs can be cut by 50% or more by using poles set in the ground and building the addition on this pole framework. The poles act as both foundation and frame.

There are several types of poles. First and best are poles pressure treated with coal tar creosote or pentachlorophenol. Such poles have a life expectancy of 50 to 75 years in the soil. Home grown straight black locust or red cedar can be used without treatment, but genuine red cedar poles large enough for the job are rare in this area.

Pressure treated poles usually may be purchased from power, telegraph or construction companies or Army surplus yards at from \$3 to \$15 per pole, depending on their size and the way they are treated to prevent decay. If pressure treated poles cannot be purchased, then such wood as pine, white cedar, aspen and birch may be used as a last resort and may be treated by the sap stream method. To give them some extra life, these trees should be cut between May 1 and September 1 and the butts set in a 20% solution of chromated zinc chloride the day they are cut.

Poles up to 16 feet long should be 4 to 5 inches thick at the top, and those over 20 feet long should be at least 6 inches at the top. Poles are set four feet deep in most soils and spaced 13 feet apart to make the best use of 14 foot lumber. For 12 foot lumber, poles should be 11½ feet apart. In soft soils, they can be set in 5 foot holes, and in hard clay soil, the short poles may be set as little as 3 feet deep. Make the hole 6 or 8 inches wider than the butt of the hole to facilitate tamping. Tractor augers as a rule do not dig deep enough for this type work.

In addition to ample bedded area for the cows, loafing areas usually provide space along the north wall to store bedding. Here it acts as an insulator and is convenient for use. An earthen floor is satisfactory in the loafing barn if it is well drained. Because the bed may be built up to 4 or 5 feet deep during the winter season, there must be 10 or 12 feet of ceiling height throughout the pen. The south or southeast side of the barn is left open for effective ventilation.

Build the paved barnyard on the open side of the pen so it leads to the feeding area. It should provide 100 square feet for each cow and be built of concrete or blacktop on top of 6 or 8 inches of gravel.

EDITOR'S NOTE: Complete details of pole construction are available. Write to Agricultural Engineering Dept., State College of Agriculture, Ithaca, N. Y. Ask for bulletin 401. It's free to New York State residents.

ANOTHER \$500,000,000 WORTH!

A far-reaching program for rail transportation—designed to meet the rising needs of commerce and the demands of national defense — was adopted by the member lines of the Association of American Railroads at a recent meeting in Chicago.

As part of that program, the railroads have placed, or are in the process of placing, orders for more than \$500,000,000 worth of new freight cars. This brings the total spent on improvements in railroad plant and equipment since World War II to more than 5 billion dollars.

In the past ten years, the railroads have built and bought 600,000 new, bigger and better freight cars, 11,000 new Diesel units, and 1,700 new and improved steam locomotives, besides making great improvements in tracks, terminals, signals, shops, and every part of the railroad plant.

In addition, railroads are speeding up the return to service of freight cars awaiting repair, and are taking steps — with the cooperation of shippers and government agencies — to secure the maximum utilization of all available cars.

The program of the railroads is an essential part of any increase in national production — *for neither in commerce nor in defense can America produce and use more of anything than can be hauled.* There is no way in which the nation's effective hauling capacity can be expanded so quickly and with such small demands upon man power and materials, as by adding to the serviceable freight car fleet of the railroads.

In meeting transportation demands in World War II, the railroads enjoyed splendid cooperation from users of transportation, much of it organized and carried out through the Shippers Advisory Boards and their local Car Efficiency Committees; and the helpful assistance of an outstanding government agency, the Office of Defense Transportation. With this same sort of cooperation and with an opportunity to secure necessary man power and materials, the railroads will reach the goal to which they are pledged — adequate transportation for all America, in peace and in war.

ASSOCIATION OF AMERICAN RAILROADS

WASHINGTON 6, D. C.

Three AMERICAN Dates:

JULY 4, 1776

By sacrifices beyond the power of pen to describe, our forefathers gave us America, founded upon the liberty of the individual to achieve success and happiness through the full use of the talents God gave him. They lighted the torch of freedom and handed it on undimmed.

MARCH 4, 1789

To make sure that the liberties which had cost so much in blood, sweat and tears would become permanent, our forefathers established on March 4, 1789, the Constitution of these United States, which, with its Bill of Rights, guarantees the greatest freedom ever enjoyed by the people of any nation.

NOVEMBER 7, 1950

But now we of our generation are not handing on the torch undimmed. Millions want to change our form of government for schemes or "isms" that have been tried by mankind in other countries and always failed. There must never be any "ism" in America except Americanism!

Our fathers and our sons fought and died for American principles in two world wars. More of our sons died in Korea. They fought for the principle that the government is the servant, not the master of the people.

The responsibility of preserving our liberties rests on you even more than it does on the boys on the firing line, for the only way we have to preserve liberty here at home is through the ballot box. Compared to the sacrifices of our fathers and sons, it is little indeed that we only have to go to the polls and cast our votes!

Many of us today are doing everything we can to save our rapidly disappearing liberties. Will YOU help? The first thing to do is keep your date November 7.

IT IS YOUR RESPONSIBILITY TO VOTE TUESDAY, NOVEMBER 7, 1950

AA's Farmers' Dollar Guide

PRICE OUTLOOK: Rapid inflation seems less likely than a month ago; also, danger of war with Russia. U. S. plans for war production will go ahead, but at a slower rate. Present price and supply outlook is about like this:

PRICES will be higher, but not as much higher as was first anticipated. Chief reason for increases is higher wages for labor. Some economists estimate that what you buy in 1951 will average to cost around 10 per cent more. Chances that farm income will be up 10 per cent are not rosy!

Tightening of **CREDIT** on autos is disliked by unions and doubtless by manufacturers and dealers. Might cause some unemployment, especially since credit on houses has also been tightened. Also might make more money available for food and "up" food prices.

No **FERTILIZER** famine is in sight. Production will be about the same as 1950; demand may be slightly higher.

With slower war production, **FARM MACHINERY** output will probably be adequate. Farmers have more equipment now than they had in 1940.

Supply of **INSECTICIDES** for 1951 looks short, but steps are being taken to increase production.

Capable **FARM HELP** will be short. Many young men will be drafted.

CROPS: Total 1950 crop production is 4th highest on record. There will be some soft corn. U. S. **CORN** estimate is 3,118,000,000 bushels. **WHEAT** crop is slightly above 1 billion bushels. **FEED GRAIN** supply is nearly the biggest on record. **POTATO** estimate jumped again in September. The expected crop is 427,000,000 bushels. USDA is suggesting that potato acreage be cut 15 per cent. Without price supports in '51, we might get a voluntary and more sensible acreage cut—bigger cuts, maybe 100 per cent,—on poor potato land; smaller cuts or perhaps none on good potato farms—rather than a straight percentage cut on all farms.

Acreage controls on all crops will be soft-pedaled in '51. With the possibility of war, the administration feels that production should be encouraged rather than discouraged. Chances seem against price ceilings on farm products, but government has power to control (or to try to control) all prices and wages. If you don't like controls, write your congressman now.

BRANNAN PLAN: Vigorous objection by farmers to the Brannan Plan has resulted in a "cooling off" by the administration. If 4 states where the Brannan Plan is an issue turn in fewer pro-administration farm votes than at the last election, there is some speculation about Brannan's future in the Cabinet.

MACHINERY: Increase in farm equipment has been startling. Some southern states have doubled the number of tractors since 1945. U. S. farmers own 71 per cent more combines than they did in 1945, and double the number of corn pickers. Number of manure spreaders is up 20 per cent since 1942 and milking machines have increased from 255,000 in 1942 to 710,000 at the present time.

Farmers' investment in machinery is high. Here are four suggestions for lowering costs and increasing returns:

1. Keep equipment in proper repair and adjustment.
2. Share machinery with neighbors; each buying a part of what's needed.
3. In some cases, try cooperative ownership.
4. Do custom work to use equipment more hours and thus reduce overhead cost per hour.

To this we might add a 5th suggestion, namely, that used machinery can sometimes be purchased economically.

INCOME TAX: It is time to think about your income tax. Check up on your receipts and expenses. Check carefully on exemptions. If you do a big farm business, it may pay to hire the help of an accountant to check over your figures. A little work now will save you time, headaches, and probably some cash.

—Hugh Cosline

The Song of the Lazy Farmer

ONE time when I don't go away is on Mirandy's baking day. When-e'er she lays out a pie tin and flours up her rolling pin, I cancel all my plans to roam and spend the whole day right at home. No sum of cash would make me go when my wife's got her hands in dough; for one thing, her fine artistry is something wonderful to see; then too, I've known no greater joy thruout my life, as man or boy, than sniffin' odors that drift by from ovens full of apple pie. I'll bet that heaven smells the way our kitchen does on baking day.

Besides, it's fun to use my wits and give Mirandy seven fits by watchin' close so I can see where she hides new-baked pies from me; for years it's been a kind of game at which I have earned quite a name. But she keeps right on tryin' hard to catch the expert off his guard by tellin' me today's pies are for neighbors or a church bazaar, or else she sends me on the run

so I ain't there when they are done. It makes no difference, cuz I know each hiding place where pies might go, and so by supper, as she feared, a piece or two has disappeared.

Chapin Voices Optimism at League's Annual Meeting

I BELIEVE that we can look forward with optimism regarding our milk prices," Leon A. Chapin, president of the Dairymen's League Cooperative Association, told 1,500 delegates and guests attending the League's 31st annual meeting at Syracuse last month.

Mr. Chapin granted that it was hazardous for him to predict what the present fiscal year of the cooperative will bring, that uncertain world conditions and threat of war meant rising taxes, increasing man-power shortage on farms, and increased production costs all along the line, and attributed his optimism to the Defense Production Act of 1950. "The Act," said Chapin, "gives the President of the United States power to control prices and wages, but it does not give him the power to fix milk prices. The law provides that prices for milk sold under Federal milk marketing orders shall continue to be established as they have been in the past."

He explained that under the Act, markets not under a marketing order are also exempt from presidential regulation. Said the League president: "It's a matter of pride to me that the Dairymen's League Cooperative Association had an important part in obtaining the exemption for milk prices when the Defense Production Act was written." In obtaining the exemption for milk, Chapin said dairymen were aided in the U. S. Senate by New York's senators and in the House by Representative W. Sterling Cole of Bath, N. Y., who "played a very important part" in getting the legislation that resulted in "dairy farmers throughout the whole country" being in a more favorable position.

Saves \$3,267,000

The League president also pointed out that the Association led a fight in the fall of 1949 to protect dairymen from a sharp reduction in the Class 1-A price. "News of the threat to farm purchasing power was broadcast throughout the whole milk shed. Granges, Farm Bureaus, business men's groups and others joined in an irresistible wave of support for the Dairymen's League program of floor prices for the first five months of 1950. The success of that program added \$3,267,000 to the income of New York milk shed dairymen, which would have been lost had

At the conclusion of the annual meeting, the Board of Directors named Leon A. Chapin president of the League for a third term. Other officers elected were: Ernest C. Strobeck, Macedon, treasurer; A. Morelle Cheney, Bemus Point, secretary; Grover C. Guernsey, Schoharie, executive committee. Re-elected were: Paul Talbot, Burlington Flats, first vice president; Louis M. Hardin, Sussex, N. J., second vice president; Stanley H. Benham, Millbrook, assistant treasurer; Miss Priscilla E. Rowe, Tarrytown, assistant secretary; and Seward A. Miller, White Plains, general counsel.

not the Dairymen's League moved promptly and forcefully to protect producers' prices."

Although the Association handled 14% more milk in the 1949-50 fiscal year, the net sales in dollars were more than 5% less than the previous year, a drop that President Chapin blamed on several things, including the driving down of selling prices "by the pressure of ambitious politicians and organized consumer groups. The situation was made much more difficult by the drastic price reductions initiated by one of the largest New York distributors. That broke the price structure for the whole market and made it impossible to attain an upward revision of prices until after the end of our fiscal year."

Membership Gain

Mr. Chapin reported a gain in membership of 686 over the previous year, bringing total participating membership to 26,002.

Commenting on handling surplus milk in country receiving plants and then transferring the milk to manufacturing plants where it could be converted into a salable product, Chapin said: "The tremendous cost borne by your Association in handling this surplus—an unjust cost in the neighborhood of a million and a quarter dollars—is a serious problem. Handling that surplus is a service to the whole dairy industry of the New York Milk Shed. The cost should be borne by the market pool. A conversion or relocation differential should be written into the market."

His father and mother were both delegates and he had to stay home to do the chores.

A Look at the 1950 Apple Market

By E. Stuart Hubbard

President, New York State Horticultural Society

EACH season has its own peculiar pattern in the development, harvesting and marketing of the apple crop. This one is especially interesting. Following the disastrously low prices of last season, a considerable number of orchards in the Hudson Valley were abandoned or changed ownership. New methods of management, especially in spraying, were adopted. Costs were cut to a minimum. In many cases the usual early purchase of packages was delayed.

The weather here in the Valley blessed us with ample, though not excessive, soil water, promoting a continuous growth of fruit. But in doing so the skies were cloudy or overcast, the air humid, some precipitation almost daily during May, June and July, giving ideal conditions for scab development.

Insects Plentiful

The insect problem has been surprising in the almost complete absence of red-banded leaf roller and codling moth (where thorough control measures were used) and in the severity of damage by rosy aphids and the persistence of the mites where the early sprays were slighted or omitted. Apple maggot has so extended its season of activity that special sprays in September were needed to kill the flies found in orchards which formerly were kept free from them and maggot damage by June and July sprays or dusts. Widespread loss of fruit is reported where late sprays were lacking.

The newer mist or air driven sprays made possible cutting labor costs in applying them as much as 75% and a considerable saving in the amounts of materials per application. But the increased number of applications so urgently required has prevented much saving in total costs.

As could be expected, some cases of failure to control came while learning how to use new radically different types of machines. On the whole, the effectiveness of control under most critical conditions has been demonstrated when the ability and weaknesses of each type are thoroughly understood.

A Fine Harvest

This season started ten days to two weeks late. A cold, cloudy summer has maintained this lateness so that, in contrast to the Virginia climate of last season, we have had the climate of down east Maine, especially during McIntosh harvest. Timely hurricane-inspired rains before harvest gave the apples a final boost lacking the two past years. The results are that in nor-

mal size of fruit, in firmness and finish and in color the apples harvested are the finest I have ever seen. Buyers do not have to go North of our Valley to secure northern color and firmness in McIntosh, except where too much nitrogen was available.

As the harvest season approached, it became evident that a fine crop of apples would require containers. Growers who had delayed unduly in ordering from the mills often found that orders could not be filled until during or after harvest. Due to lack of orders and normal early production, the mills and many growers had no stockpile of crates. Then the Korean war caused the government to demand boxes, taking lumber and production away from apple packages.

The result has been a wild scramble for any kind of container that can hold apples even temporarily in storage or packing house. Prices of used apple boxes have soared. Baskets, pear and Western apple boxes, tomato crates, beer cases and old-time orchard crates have been dug up and filled with apples.

This shortage has had one good effect. It has kept a flood of drops off the market. The low price of apples and the need of packages for better fruit have restrained that thrifty impulse to save and force every last apple on to the market regardless of profit or need. While the McIntosh drop, except at the end of harvest, has been negligible there are scab-infested trees that have not been picked which would normally have contributed to a flood of low-grade apples.

Some Mistakes

Marketwise, there is a feeling of fundamental optimism as to the soundness of the apple deal. There is, however, dismay at the demoralized condition of our markets. This has been caused mainly by:

1. The need by growers of money to harvest the crop and to pay debts.
2. The shortage of farm storage space where yields have been heavy.
3. The need for packages which could be brought back for second use.
4. The slowness of consumers in using McIntosh and other red apples because of premature picking of red, but unripe, apples due to beautiful color coming before maturity.
5. Lack of grower cooperation in securing crop and market information and the concerted, intelligent use of such information to prevent the dumping of the finest apples in the world on an unready market at whatever price the apples would bring.

These conditions have resulted in our New York and New England apples selling in our markets at lower prices than those quoted for any apples of comparable quality anywhere in America this fall.

Fundamentally Sound

Western New York has made a start at organized grower marketing and promotion. There are several large co-operatives in New England and large operators in Eastern New York who are better informed and able to distribute more widely than the great mass of uninformed growers and dealers whose market information comes mainly from the buyers who wish to buy their apples cheap on a flooded market.

There are many indications of the

One evening while he smoked in bed
And scanned the paper, careless Fred
Made news himself which was quite dire—
He found he'd set his bed on fire!

for **BIGGER YIELDS**
of **BETTER CORN...**

FUNK G HYBRIDS

There are two varieties of Funk G Hybrids available that ripen to full maturity and produce more corn even with short growing seasons.

These hybrids have been tested and proved locally in your area. Fast, vigorous growth to maturity even in short, wet or cold growing seasons makes these Funk G Hybrids ideal for corn growers in New York, northern Pennsylvania and other high altitude areas.

Both Funk G-10 and G-6 have "bred in" characteristics that produce outstanding results. Each of these 5-star features — fast-starting, excellent standability, disease, insect and drouth resistance — means bigger yields and greater profits at harvest time.

Whatever your local soil or climate conditions, there is a Funk G Hybrid especially suited to your needs whether you want silage or husking corn. We will be glad to help you select the FUNK G HYBRID that is "made to order" for your area.

Plant for profit. Take the first step. Order your Funk G Hybrid seed corn today.

FREE—New colorful 24-page booklet that tells all about the new 5-star Funk G Hybrids that are especially suited to high altitude, short season areas. To get your copy while they are available, mail the coupon below.

PERSONAL STATEMENT

I AM NOT much of a partisan. I do not believe the best men are all in one party, and more often than not I have split my ticket when voting. But this year I shall vote the straight Republican ticket, and if you are interested, here's why:

Nationally, the safety of our liberties is very dependent on a two-party system. One party, either Republican or Democratic, too long in power, becomes bureaucratic and dictatorial, and rapidly builds up its power to keep itself in office. The New Dealers and the Fair Dealers have been in power for 20 years. They have built a tremendously powerful political machine which is rapidly centralizing our government and usurping our liberties. It's time for a change.

This is not a presidential election year, but the congressional elections are highly important, for if the Republicans can elect a majority in either or both houses it will give a balance of power, and the checks and balances needed to protect the interests of the people. Furthermore, if the Republicans lose the state and congressional election, it will be difficult indeed for them ever to secure a foothold again and may well lead toward complete one-party control. I don't believe that either thinking Democrats or Republicans want that!

From the farmers' standpoint the elections this year are particularly important. In these northeastern states, where rural people are outnumbered by city consumers twenty to one, the Democratic Party is a city party. Its candidates, except for a few for whom I have voted in past years, know little and care less about farm and other rural problems. This is particularly true of most of the Democratic candidates in New York State this year. Their number one idea is to get cheap food for consumers, and farmers know that at the present high costs of production, cheap food cannot be had without taking it out of the hides of the producers.

Mr. Lynch, the Democratic candidate for Governor and most of his associates are New York City men with the big city point of view. Most of their policies are opposed to upstate policies and interests, which are mostly rural.

On the contrary, Governor Dewey and nearly all of the Republican candidates know the need of rural people and have an outstanding record in support of nearly everything the farmers and their organizations have asked for. Ninety-five per cent of the requests and suggestions for the good of agriculture and rural life made by the New York State Conference Board of Farm Organizations (which is composed of every state wide farm organization) have been granted by the Dewey Administration.

I am personally familiar with Governor Dewey's farm operations on his farm in Pawling, New York. He is gradually paying off a mortgage, and the whole farm operation is practical and down to earth. He knows farm problems from his own first-hand experience. A Governor with that kind of farm experience and understanding is too rare for rural people to lose in this Northeast region of skyscrapers.

Those are some of the reasons why I shall vote Republican next Tuesday, but whether or not you agree with me, I hope that you will surely vote.

OUR HOME EDITOR HONORED

WITH a number of other women leaders, Mrs. Mabel Hebel, Home Editor of *American Agriculturist*, received a citation from the New York Woman's Council at its fifth anniversary luncheon in New York City on October 16. Governor Thomas E. Dewey awarded the citations, which were signed by the Governor, Commissioner of Commerce Harold Keller, and Miss Jane H. Todd, Deputy Commissioner of Commerce and head of the Council.

The award was given to Mrs. Hebel in recognition of her contribution to the program of the New York Woman's Council, which was organized in 1945 by Governor Dewey to widen economic

By E. R. Eastman

opportunities for women. The Council provides expert guidance, free of charge, for women who are interested in starting or expanding a business.

Many a woman who has a family to care for has longed for ways and means of earning extra money at home. This need has been fully recognized by Mrs. Hebel and *American Agriculturist*, and she has enthusiastically supported the fine work of the Council. We are indeed proud of this honor that has come to Mrs. Hebel.

ALBERT S. GOSS

AGRICULTURE has lost a great leader, and farmers a real friend in the death of Albert S. Goss, Master of the National Grange from a heart attack on October 25.

Master Goss was born in Rochester, New York, in 1882. His life is another outstanding example of what a boy or girl can achieve under the American system of free enterprise and liberty of the individual.

Albert Goss's career began as a bookkeeper in 1901. He had early business experience in the milling business, in a general store, the telephone business, and finally in farming. Since 1920 he had been active as a leader in Grange affairs, including Master of the Washington State Grange from 1922 to 1933. From 1933 to 1940 he was Land Bank Commissioner in the Farm Credit Administration in Washington, and at the time of his death was Master of the National Grange, in which position he has served for many years.

It was my privilege to know and work with Brother Goss personally. He believed in America, and he spent his energy and his life in fighting to preserve the basic principles that make this country great. One never had to guess where Albert Goss stood on any question. He may have been wrong sometimes, as we all are, but if he made any mistakes, they were of the head and not of the heart. As Master of the National Grange he kept it marching on in its service to farmers and to America.

NEW COMMISSIONER OF EDUCATION

AT ITS OCTOBER MEETING, the New York State Board of Regents elected Lewis A. Wilson Commissioner of Education and President of the University of the State of New York.

Teacher, school principal, Director of the Division of Vocational Education in the State Department of Education, Assistant Commissioner of Education, Associate Commissioner of Education, Deputy Commissioner of Education, and Acting Commissioner of Education is Dr. Wilson's record for more than forty years in the service of the educational interests and welfare of boys and girls.

The State of New York is to be congratulated upon securing for this highly important position the services of a man who knows the educational problems of the State and is so well qualified to help solve them.

THEY HAD WHAT IT TAKES

IN E. R. EASTMAN'S book, *THE SETTLERS*, a farm family leaves their Columbia County home on a cold February morning in 1807 and face westward over the famous Catskill Trail. Few of us now can realize what that journey was like, where for mile after weary mile the woods came right down to the rough winding trail.

Before the journey of this family is completed, before the Genesee country is settled, before the War of 1812 is over, these New York State pioneers have ample need of their qualities of endurance and courage to win through the hardships and the adventures so convincingly told in *THE SETTLERS*.

Much of central and western New York State is included in the area covered by this great story. From Claverack on the east bank of the Hudson River a line may be drawn westward to Ithaca, northwest to Geneva, and then west again to the banks of the Genesee River. That is the country through which the settlers traveled, bringing to light a vital chapter in American history and the work, adventures, hatreds and loves of the people who made that history.

I have enjoyed reading all of Ed's five books, but in my opinion this is by far the best one yet. You will make no mistake in buying this book for yourself, or several copies for your friends or for Christmas giving. Send a check for \$3 for each copy to *American Agriculturist*, Department S, Savings Bank Building, Ithaca, N. Y., and the copies will be sent postpaid.—I. M. L.

HOW HE HANDLED HIS CORN

"On your editorial page of the October 7 *American Agriculturist*, you mention a fellow picking his corn for grain and then putting the stalks in the silo. How does he propose to do this? Our experience around here has been that mechanical pickers couldn't pick corn while stalks were green, and they would destroy most of the stalks.

"Perhaps where there is a small acreage it can be picked by hand, but will corn picked so early keep in a crib?

"We have a large farm here—or rather farms—about 500 acres, with about 70 acres of black raspberries, milk 24 cows, and keep about 900 chickens." N.W.H., N. Y.

TO comment on the last part of this letter first, all my life I have wanted to run a berry farm, but I'd certainly hate to take the responsibility for picking 70 acres of black raspberries! And as between picking the blackberries and the corn, I'll take the corn.

To answer the question in the first part of this letter about picking corn, my friend and neighbor waited until the corn had matured, cut it with a harvester, snapped the ears off without husking at the blower, and ran the stalks into the silo with plenty of water. The ears will be ground later, husks and all. My friend thinks that the combination of husks and the corn makes a good feed. Of course, the stalks and the corn are mature and dry, and therefore the dried stalks don't have the value in the silo that they would have if they were green.

My neighbor is among the increasing number of farmers in the Northeast who are growing more and more of their own grain for home feed. Next year, in addition to wheat and corn, he plans a large acreage of soybeans.

MORE MILK FOR FARM BANQUETS

EDITOR George Lee of the *Dairymen's League News* points out that no milk and cheese, and very little butter, are served at big farm dinners. This is true, but I wonder, George, if the dairy organizations themselves are not to blame for this situation? Why not bring a little pressure on those who plan these dinners to serve to each guest a glass of milk, a pat of butter that one doesn't require a microscope to see, and cheese in some form? What's the matter with pie and cheese for dessert?

EASTMAN'S CHESTNUTS

PILOT to tower! Pilot to tower! Plane out of gas. Am 8,000 feet in air and 30 miles over Atlantic Ocean. What shall I do?"

"Tower to pilot! Tower to pilot! Repeat after me: 'Our Father, who art in heaven . . .'"

Floating down through space, he came upon an old lady flying up through same.

"Hey, lady," the flier yelled, "seen anything of a P-38 going down?"

"Just passed it!" she yelled back. "Seen anything of a gas stove going up?"

Best by "Gain-Test"

From range country experiment stations come news-worthy reports, telling of a sire selection method that's something new in livestock improvement. A method that may help you select sires whose offspring should make faster gains, turn your feeds into meat at less cost.

You want cattle, hogs and lambs that will make you more for the grass or feed you put into them. That's why you look long for good sires; why you will pay a big price for a bull, boar or ram that you hope will improve your herd. But it's often difficult, or too expensive, to buy proven sires. And, even with fine pedigree, appearance and conformation, the young animal that looks best to you may prove disappointing as a sire. Now, the experiments indicate, this new method of "gain-testing" may enable you to use more than your eyes and the animal's pedigree in selecting your sires. Here's how it has worked out:

At weaning time a number of bull calves were selected as possible sire material. The weight of each individual was recorded. The young bulls went into a feed lot. They were fed the same ration as fattening steers would get. After several weeks on feed they were weighed again individually. . . . Repeated, carefully controlled tests—by the U. S. D. A. and several co-operating states—have shown that the bulls which make the best gains usually prove to be the best sires in the lot. This test is not "dead sure." But in over 80% of the cases reported sires were able to pass along to their offspring their own fast-gaining ability.

This gain-test method is a new aid to your experience and judgment in sire selection. It's good not only for cattle, but similar tests are valuable in sheep and hog raising also. It can save you time and money. It may speed up your breed improvement program—perhaps more than any other recent development in breeding practice. Ask your county agent or vocational agricultural teacher for information on gain-testing of sires. It might be highly profitable for you.

Competition

What would happen to a meat packer who tried to buy livestock for less than others are willing to pay? He just simply wouldn't get the animals. His plants would stand idle. He would lose money, fast. Pretty soon he would be out of business. . . . Or, if he tried to sell too high, the storekeepers wouldn't buy his meat. It would begin to spoil. Losses would pile up. Pretty soon, again, he would be out of business.

We are in the business of buying livestock, turning it into meat, and selling that meat. As most people know, it is a business of large volume and small margins. For we are dealing in commodities—and against the stiffest kind of competition. Besides Swift, there are 18,000 other meat packers and commercial slaughterers of livestock. At one time or another we are in direct competition with all of them—both in buying and in selling.

OUR CITY COUSIN

Why does City Cousin stare?
He thought they said,
"That's our new mayor!"

"What does Chicago say?"

You have probably heard that question many times. I know I have—livestock commission men, teachers of livestock marketing, producers asking, "What does Chicago say?"

What do they mean by that?

Well, as you know, Swift & Company has meat packing plants in many places. Each of those local plants supplies meat to the customers in its own territory. But when the producers in the area surrounding one of our plants are marketing more livestock than our people know can be sold locally as meat, then our plant asks Chicago for help in distributing that surplus.

To find markets for that surplus meat, Swift keeps track of the demand for meat on a nation-wide basis. Information similar to ours, from government sources, is available to everyone. From it we estimate what meat will bring in consuming centers where little or no livestock is produced. Then our Chicago office advises the local Swift plant with the surplus accordingly. With this information at hand our local livestock buyers go into the market to buy cattle, calves, lambs and hogs. The livestock which our plants buy, with the help of Chicago's advice, they convert into meat and ship to the big consuming centers.

In short, the only time "Chicago says" anything is when a local plant needs help in distributing a surplus supply of meat. Seldom if ever do as many as a dozen out of our fifty plants need this help from Chicago at one time.

This distributing of surplus meats (from areas that produce more than they can consume locally) is of great value to producers and consumers. To producers, because their local livestock prices are thus determined on a basis of nation-wide demand, rather than on an over-supplied condition in their own local community. And to consumers, because it provides adequate supplies of meat to people living in those areas which do not produce enough livestock for their own needs.

F.M. Simpson.

Agricultural Research Dept.

Martha Logan's Recipe for SPECIAL HOT TURKEY SANDWICH

Here's a real he-man sandwich made from sliced cold turkey and heated stuffing and gravy.

On slice of bread (or toast) place about 1 cup of hot well-seasoned stuffing. Over the top lay slices of white and dark turkey. Then pour on about 1 cup of hot turkey giblet gravy. Serve with hot mashed potatoes, if desired. Cranberry sauce, of course.

Soda Bill Sez:

When a feller makes a mistake and doesn't admit it, he's made two mistakes. And if he doesn't fix it up, he's made three!

When a man says, "You're like me . . ." that's a compliment, even if you don't think so.

Quote of the Month

Big business is little business grown up. It grew up and became big because it was useful and contributed to the general welfare; was efficient and rendered a valuable service. Big business grows up because the public allows it to do so. No business can become big business without public approval, and public approval cannot be bought. It is earned through hard work in giving a better service than competition can perform or produce. Demand for its product is what makes it grow big.

The Role of Grass in Beef Production

by A. J. Dyer,
University of Missouri
Columbia, Mo.

A. J. Dyer

Grass puts stability into the cattle business. Thirty years ago, cattle feeders were corn-minded. Feeder cattle were almost immediately started on grain feed after purchase. Now, wide use of pasture and roughage enables the cattle feeder to make some profit from cattle fattening even if cattle prices drop some between purchase time and date of sale. If income is to be maintained, roughage and pasture must be converted into meat. Beef cattle can do it.

At the Missouri Station, choice 400-pound feeder calves have been developed to 1200-pound fat 2-year-olds grading good in the carcass with about 10 bushels of corn. Sixty percent of the entire gain was made from pasture and 30% from roughage, 10% from grain feeding. Fat 1050-pound yearlings have been produced from 400-pound feeder calves with about 25 bushels of corn. About 40% of the total gain was made from pasture, 30% from roughage, and 30% from grain feeding in dry lot. Feeding some grain is essential in order to market the pasture gains to advantage.

New and old pasture crops and more know-how about utilizing them, increased use of plant foods, development of cattle that put on flesh readily have all contributed to the increased use of roughage and pasture.

Animal Disease Control in Sweden

By VIRGIL WHITE
As told to Karl E. Jensen

EDITOR'S NOTE: The author, a 4-H Club winner of one of the National Poultry Awards, completed a tour of Scandinavia last summer under the auspices of the Lederle Laboratories Division, American Cyanamid Company. This trip was sponsored in the belief that American youth should come to know better our European farm cousins and their methods. White was accompanied on this trip by Karl E. Jensen, a Lederle executive.

ONE OF the most impressive observations made during my tour of Scandinavia was the low incidence of disease among the country's livestock. The Head of the Ministry of Veterinary Affairs in Sweden, Director G. A. Bouveng, told me that one of the most important factors contributing to the health of livestock in Sweden is the observance of the "Epizootic Law," enacted in 1935, and which governs the control of epidemic animal diseases.

The law currently covers foot and mouth disease, rinderpest, bovine pneumonia, hog cholera, glanders, rabies, sheep-pox, anthrax, mange, fowl pest, fowl cholera, Newcastle disease, bru-

cellosis, infectious hoof anemia, and distemper. Although covered by the law, glanders, rabies, rinderpest, bovine pneumonia, and mange are rare or absent in Sweden.

Foot and mouth disease, the importation of which is an ever-present threat in our southwestern states, has not been found in Sweden since March, 1949. Hog cholera has been absent from the country for the last five years, fowl pest for the last two, and only one case of Newcastle disease was reported in the first three months of this year.

Indemnities to Owners

Control of bovine tuberculosis and of brucellosis are left pretty much in the hands of each individual farmer in districts in which epidemics have not been brought under control, but when one of the diseases involved has been brought under 95-99% control, the Epizootic Law is applied to the district, and all animals carrying the disease are systematically slaughtered. In each case the owner of the animal receives partial compensation from a

public fund set up for the purpose; in the case of brucellosis, he receives full value of the animal.

The Ministry of Veterinary Affairs maintains very accurate statistical reports of the incidence of all animal diseases, and this information is published monthly for the benefit of veterinarians, who number almost 700 throughout Sweden.

Until 1947, the Veterinary Administration was one of seven departments under the direction of the Ministry of Health, which is a subdivision of the Department of Social Affairs. The particular problems of the veterinary department were, however, chiefly channeled through the Department of Agriculture.

Good Organization

The veterinary department is roughly divided into four sections. The so-called general section distributes a great deal of educational material, supervises quarantine stations and military veterinarians, and controls the standards required of livestock and fodder from abroad. The second department, concerned with hygiene, supervises the city and rural veterinarians, public meat inspection stations, the import and export of meat and fat, and hygiene concerned with milk and fodder in general.

The third department is concerned with control of specific diseases. This department supervises the control of several diseases of livestock, such as tuberculosis, with the cooperation of the farmers, themselves. It also controls those veterinarians and laboratories which are enlisted in such campaigns, as well as overseeing the general hygiene of the farm.

The fourth department deals with administrative matters and judicial questions in general. It is concerned with the general organization and per-

sonnel of the entire veterinary administration and with its relation to other sections of the government.

Keeping Disease Out

The problem of foot and mouth disease in Sweden is mainly one of danger of infection from outside the country. The occurrence of this disease is intimately related to its occurrence on the island of Zeeland in Denmark, a very concentrated agricultural area with a large cattle population, which is separated from southern Sweden by only a few miles of water. Usually, the incidence of the disease in Sweden is from one-third to one-fourth of the incidence in Zeeland. The most serious outbreak in recent years occurred in 1948 when approximately 18,000 herds on this Danish island were infected, with about 5,000 herds infected in southern Sweden. The only other outbreak comparable to this occurred in 1936 when about 17,000 herds on Zeeland and about 5,000 herds in southern Sweden were infected. The disease seems to move in 5 to 6 year cycles.

I had the good fortune to be in Stockholm in July, 1949 at the time of the 12th International Dairy Congress, and attended a number of the sessions. There were several other 4-H boys present, and we learned a great deal from the Congress.

So far, the Swedish dairy industry has been collaborating chiefly in the eradication of tuberculosis and brucellosis. As far as bovine tuberculosis is concerned, the dairy industry has done its best to persuade the livestock owners to take remedial action, and economically compels them to do so by establishing different prices for milk sold to dairies. They also encourage the farmers to place their infected herds under state control for tuberculin treatment. Leaders of the dairy industry feel that dairies should now

We Need Florida
Sunshine Too!
"us cows that is"

You can't send your cows to Florida, but you can bring sunshine to your cows with Florida Citrus Pulp—now available year 'round!

Florida Citrus Pulp is highly palatable and cattle eat it readily. A bulky feed which keeps well in storage, this Citrus Pulp is extremely high in TDN (total digestible nutrients).

The fiber content of Florida Citrus Pulp is extremely low and the feed contains factors which stimulate milk production. This feed imparts no unnatural flavor to the milk.

THE SUNSHINE
CATTLE FEED!

Florida Citrus Pulp is mildly laxative and imparts a sleek appearance to the cows, giving them a glossier coat of hair. The feed contains the important minerals—calcium, magnesium, phosphorus, iron, copper, zinc and manganese—essential to milk production and animal growth.

For free, illustrated folder giving complete information about Florida Citrus Pulp, write a card today to Citrus Processors Association, P. O. Box 188-A, Lakeland, Florida.

How low cost retailing Produces More Income for Farmers

SAFEWAY'S FUNCTION in food distribution is *retailing* . . . the retail store selling of food at low cost.

Our kind of retailing works to keep *down* handling costs and to keep *up* the volume of farm product sales.

During recent years we've been remodeling and modernizing our stores to make possible even more convenient *self-service* food shopping.

Our modernized stores sell more food per store and per employee. Thus they can operate for fewer pennies out of each food dollar spent in them.

We are selling a much larger volume of food which, together with increased efficiency, has enabled us to reduce costs percentage-wise . . . in spite of the tremendous dollar increases in labor and other costs compared with 10 years ago.

For all retailing services, Safeway now requires less than 14¢ out of each food dollar spent by customers in Safeway stores.

This 14¢ covers all our costs of doing a retail business (wages, rents, taxes, advertising, etc.) plus a profit.

Safeway's profit in 1949 was 1½¢ per dollar of food sales at Safeway stores.

Do not confuse this 14¢ Safeway cost for retailing with the total cost of ALL distribution services.

Such total cost is sometimes estimated to average 50¢ per dollar of food sales (with the remaining 50¢ going to farmers).

For example: Farm products need transportation to market by railroads and trucking companies. They also need, in varying degrees, such services as cleaning, grading, processing, packaging and wholesaling.

All such distribution services, of course, are rendered *before* farm products reach the retailer.

By working efficiently in the field of food retailing, Safeway is able to return to farmers a larger share of each dollar of Safeway sales—and also a larger total number of dollars. Thus we do our part to produce more money income for farmers.

. . .

The Safeway idea of selling more food per store and per employee isn't ours alone. We are in free competition with many stores working toward the same end.

It seems to us that is good for everybody—for farmer, customer and store man alike. We invite you to test our ideas of how a store should be run by doing your food shopping at Safeway, where almost one-fifth of all customers are farm families.

SAFEWAY STORES

CHAPIN VOICES OPTIMISM AT LEAGUE'S ANNUAL MEETING

(Continued from Page 6)

keting orders to compensate for the handling and transportation of surplus milk."

Elected To Board

New faces on the League's 24-man board of directors will be Lester E. Tucker of Marathon to succeed Harold L. Creal of Homer, who left the directorate when he became Director of the New York State Fair, and Eldon J. Rozelle of Johnson City. Re-elected were: Stanley H. Benham, Millbrook; John E. O'Brien, Middletown; Wilber K. Clark, Delhi; Milburn J. Huntley, West Winfield; A. Morelle Cheney, Bemus Point, all of New York State; and Edward E. Kinsman, Honesdale, Pennsylvania.

Resolutions

The League members approved 14 resolutions during the session. They want representatives on rural draft boards and want their Board of Directors to "take such steps as it deems advisable to secure a change in the regulations for deferment of farm boys." It was stated in the resolution that "many draft boards are putting most farm boys in Class 1-A, thereby seriously depleting the supply of farm help."

Three resolutions put the League on record as opposed to any New York or Pennsylvania law changes that would permit the sale of yellow colored oleomargarine, and asked for a ban on the sale of any imitation dairy products.

The members want the adoption of a food allotment (stamp) plan to give low income families any food surpluses in government hands; and resolved that the board of directors should "take every step possible" to combat what was described as an "indicated attempt" by the Federal Government to obtain control in the U.S.D.A. of the State and Federal milk marketing orders.

The members opposed "any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control," and want efforts made to have newspapers and radio stations publicize the blended price of milk per quart so that consumers will have accurate information of the prices received by farmers.

In another resolution the League commended the American Dairy Association and Milk For Health officials for their work in advertising and promoting sale of milk, and urged continuation of their efforts to the end that milk advertising and promotion become a permanent active project in all markets.

The 31st annual session of the League opened Tuesday, October 10, in Syracuse, when the resolutions, women's, and Young Cooperators committees held preliminary sessions. The next two days were devoted largely to the Home Department and Young Cooperators programs, ending Wednesday night with a program of entertainment and presentations. The H. H. Rathbun Memorial Awards, consisting of two purebred heifer calves, were presented by League Vice-President Paul L. Talbot to Lois E. Rowlands, 16, of Holland Patent, and Sherwood G. Steiner, 22, of Akron.

Hugh L. Cosline, Associate Editor of *American Agriculturist* presented this farm paper's medals for outstanding leadership among rural young people to Miss JoAnne M. Dunn, 16, of North Bangor, and Robert Erdman, 14, of Little Valley. Both are very active in League Young Cooperator groups in their areas. *American Agriculturist* annually presents these achievement medals to outstanding young people in 4-H, F.F.A., and Grange, as well as to Young Cooperators.

COOPERATION

For a Brighter Farm Future...

Dairymen's League Seeks a Fairer Balance for Producers as Costs and Prices Seesaw

When today's Class 1 milk price formula was being considered last February, the Dairymen's League objected that the formula as presented would not cover production costs for the first five months. League President Chapin went to Washington with figures that caused the Agriculture Department to set a five-month floor over the formula prices. By that action, New York milkshed dairymen won an increase of almost 3½ million dollars during the months from March to July.

Prices Up After July; Costs Zoom, Too

Since July, fluid milk prices have edged steadily higher. Some of the rise is due to the ordinary workings of the formula; more of it is due to zooming living costs and department store sales, scared to inflationary levels by the Korean war.

League members—like all dairy farmers—are grateful to the formula for introducing these saving factors. They have rescued all of us from a cost squeeze that might otherwise have been ruinous. But League members are not blind to the fact that production costs and milk prices are still running neck and neck. Dairy farmers have a hard time to stay even with the race, and to husband their resources for the next round of wage boosts and cost increases.

Only Class 1-A Milk Prices Are Rising

The important thing for everybody to remember is that the increases under the formula are for fluid milk only. Too large a share of the milkshed production still goes into other classifications, dragging our blend return far below satisfactory levels.

That's why the League is launching a big television advertising campaign in New York City, striving to sell more fluid milk even in the face of price increases. And upstate League branches are advertising constantly to boost consumption in all the higher-yield classifications. Even so, we recognize that the most powerful advertising requires months before it can make an impression on an inflation-pinched public. And until that time comes . . . until consumers generally are persuaded by our advertising to drink and use more fluid milk at whatever the going price may be . . . each of us must fight to hold his costs in line with the relief that will surely come under the formula.

DAIRYMEN'S LEAGUE

Cooperative

ASSOCIATION, INC.

Does Your Lime Show ?

(Continued from Page 1)

mates show that we need about 2,000,000 tons each year for the next ten years, and 1,250,000 tons each year thereafter.

Soil tests on 948 samples from general and dairy farms in 1949 revealed that about 450 (nearly half) were pH 5.8 or lower, which is too acid even for good red clover.

Costs and Returns

Lime is cheaper for dairy farmers than it was in 1935 or 1940. If you were farming in 1935, you needed about 312 pounds of milk to buy a ton of lime. In 1940 you could buy it with 244 pounds of milk. This year, you could buy a ton of lime with slightly less than 200 pounds of milk. Furthermore, you still had to spread the lime in 1935 and 1940. The figure for this year is for bulk lime spread on your fields.

In a Cornell Experiment on acid hill land, one ton of lime produced extra feed equal to one ton of grain. This extra feed was produced during a six-year rotation. The lime cost about \$7.50. A ton of grain was worth about \$70.00.

You need to use enough lime in order to get a good return on the money you spend for seed, fertilizer, and labor. For example the new alfalfa, Ranger, that is resistant to the wilt disease, performs no better than varieties farmers have been using if it is planted on acid soil.

Home-Grown Nitrogen

The big three nutrients in fertilizers are nitrogen, phosphorus, and potassium. Nitrogen is the most costly. Yet there are thousands of pounds of it in the air over every acre of farm land. It's yours for the asking—almost. The key, of course, is found in the nodules on the roots of legumes like those on the birdsfoot trefoil shown on page 1. The partnership set-up between legumes and the nodule bacteria is fascinating. The legume roots provide food for the bacteria, and in return the bacteria take nitrogen from the air and supply it to the plants. Probably the best research in the world on the amount of nitrogen fixed by legumes was done nearly twenty years ago by Cornell agronomists. They found that a good crop of red clover took from the air in one year as much nitrogen as is contained in 2,900 pounds of a 5-10-5 fertilizer. Alfalfa was even more effective.

Is Conservation Lime Enough?

Many farmers have not understood that their ACP allotments of lime or other conservation materials is not the amount needed for good crop production. The Federal Government has a certain appropriation of money to spend for ACP practices. Various committees from Washington, down to the local county, decide on the best way to divide the money among lime, phosphate, potash, clearing brush, building diversions, and the other ACP practices. Your allotment is your share of the money available, rather than the

amount of material you need. As a result of this misunderstanding, many farmers have bought very little lime or phosphate beyond their conservation allotment. Last year, ACP lime was about one fourth the amount needed yearly for the next ten years.

Lime in the Stable

This may seem to be the wrong season of the year to talk about lime, but you can make your plans now and start using lime. You may be able to get lime spread before snow flies.

Lime can be put on loads of manure and spread all winter. You may remember that several years ago farmers were advised not to use lime on manure. That recommendation applies to the use of hydrated lime on well rotted manure. Limestone can be used satisfactorily on manure as it is spread daily.

To apply one ton of lime per acre, throw two bags of lime on each load and spread ten loads of manure to the acre. If you want to apply two tons of lime per acre, throw four bags on each load and spread the manure at the same suggested rate.

Remember that limestone does not take the place of superphosphate in the gutter and on the stable floor. In addition to the things that lime does, phosphate balances the fertilizer nutrients in the manure and reduces the loss of nitrogen. Putting lime on manure is merely a convenient way to spread it with little work on your part.

When the thermometer drops into the low 30's at night, you start laying in a supply of coal or wood for the winter. Unfortunately there is no such effective reminder to tell you when to buy more lime. Probably no one will try very hard to sell you the lime you need. The farmer makes most of the profit on this deal. If you want your share go out and get it. There is plenty of lime available, and at a reasonable cost to you.

ANIMAL DISEASE CONTROL IN SWEDEN

(Continued from Page 10)

begin to encourage definite measures against streptococcic mastitis.

Brucellosis is handled chiefly through dairy cooperatives working closely with special bodies, set up to deal with the disease, in the veterinary organization or the county farming society.

Drugs Help Control

As in many other countries in Europe, Sweden relies primarily on quarantine to protect the cattle population from epidemic diseases. In both Denmark and Sweden, when the disease has actually invaded the country to any serious extent, it is summarily dealt with even if this involves slaughter of the animal. It is therefore difficult to compare the problem as encountered in these small countries with the problem faced in the United States, with its huge area and thousands of miles of frontiers of Canada and Mexico. The trend here is to rely more heavily on immunization of herds as the means of prevention. To combat infection, American veterinarians are enlisting the potent and miraculously effective drugs which have been developed by such companies as Lederle during the past few years. Against mastitis, for example, we now have aureomycin ointment; against Newcastle disease, we have a vaccine, against blackhead in turkeys, we have 2-amino-5-nitrothiazole—all developed by Lederle Laboratories—and the future promises many more.

It was a stimulating experience for me to have the opportunity to consider the methods used in these agriculturally advanced countries for their application to the problems we face here. We can learn much from them and the converse is equally true.

WHY FEED YOUR CALF DOLLARS?

When you can feed KAFF-A

The safe replacement for milk!

Sell your cow's milk! Don't waste it on your calves. That's just like feeding them dollars! Low cost Kaff-A is an absolutely safe replacement for milk! When you feed Kaff-A, the milk your cows produce goes to the dairy—puts dollars in your bank account. Just 1 lb. of Kaff-A can replace up to 10 lbs. of milk in calf feeding. That means every 50 lb. box fed with low-cost hay and grain can release as much as 500 lbs. of milk you can sell! A handsome extra profit! With Kaff-A no milk is needed after the 10th day. Kaff-A is tested, tried,

proved a safe replacement for milk. A million healthy heifers have already been raised on it! Its dried buttermilk base is known for its nutrition. In addition, Kaff-A contains other dairy by-products, some cereal products, and plenty of Vitamin A and D Feeding Oil!

Don't risk your calf's health on inferior imitations of Kaff-A. A few pennies saved now may cost you many a dollar if your calf becomes a stunted cow. Feed Kaff-A and be sure that your calves get the nutrition that helps develop good milkers... good breeders!

Consolidated Products Company, Danville, Illinois

It's later than you think!

As you read this—it may be freezing outside ... possibly a cold rain ... or even snow. If not today, it will be in a day or so. BUT LISTEN—right this very minute, our incubators are hatching out thousands of Sunnybrook Baby Chicks. Some of them will be the Pullets that will lay the eggs for next summer and fall ... others will be the money making broilers of February and March ... while the others will be the high premium priced Capons of April and May (the big Easter season market, you know).

Are you one of those who have the habit of waiting until late spring before you get the "urge" for baby chicks? That is not the way money is made in poultry and eggs. We are booking orders every day from the successful Poultry men and women and from now on, these orders will increase until the rush of next March, April and May.

BE SMART! BE THRIFTY! Buy your Sunnybrook Baby Chicks — Started Pullets — Started Capons NOW and avoid the peak rush with peak prices and doubtful dates of delivery. Your order **will** be shipped at a later date if you insist. **LOOK!** A liberal discount will be allowed on all 1951 deliveries if we receive the order before December 31, 1950. Take a tip from us — **BE SMART! BE THRIFTY! PLACE YOUR ORDER NOW!**

BABY CHICKS

STARTED PULLETS

STARTED CAPONS

Thousands of leading Poultry men and women say that Sunnybrook Baby Chicks are the finest on the market today—regardless of price. Sunnybrook Baby Chicks are priced within the reach of every one! They come from the highest quality Poultry strains in America. They are highly selected — extra fine quality 1951 Baby Chicks and can be bought NOW at low pre-season prices. In all the popular breeds, ready for immediate delivery.

Sunnybrook Started Pullets are selling at a rate we find difficult to keep up with—they are that good. Many Poultry men and women are now buying them in addition to Baby Chicks—to keep a steady income the year round. Why don't you try it? They are priced so low, they will cost you less than if you had raised them yourself. No heat is needed—just feed them right and make some egg money in mid-winter. We have some dandy ready-to-lay pullets that we can ship you immediately.

We don't have to say much about Sunnybrook Capons. Every one knows they are great money makers, as they always bring highest premium prices. Remember that 60c a pound Capon market last Easter? We have some dandies—just the right age for that Easter market next Spring. Our 4 and 6 weeks old Capons cost less than day old turkey poults. They are past the danger point for losses. Many turkey growers are changing to Capons. In the popular heavy breeds — ready for immediate delivery.

From U. S. Approved Pullorum Clean Breeders—of Course

Wherever you live—you are a neighbor of Sunnybrook. By Parcel Post, Railway Express, by Air or by our own fleet of trucks, we get them to you safe and sound 100% alive, we guarantee.

Automatic Poultry Feeders

By G. T. KLEIN

TWO SUMMERS ago automatic feeders were the new sensation of the poultry industry. What do poultrymen think of them after a fair trial? How are they used?

To get these answers we asked questions of 50 or so New England poultrymen. The answers, not surprising to us, were all favorable. Not one would want to give them up. They have mechanical defects, yes, but nothing serious. "They save labor," practically everyone says; some think they save feed, perhaps to the extent of 10 percent.

"Put them in a new house," most growers say, especially if it's near 100 feet long. Save the expense of conventional feeders, for the cost is about the same. But they're best for the longer houses with large pens. Partitions in brooder houses aren't good, say the poultrymen. The playful little fellows get on the chain for a merry-go-round ride and are killed as it drags them through the partition wall.

Leon W. Parkhurst, Ascutney, Vermont, thinks the feeders are great labor-savers. Now working 8 hours a day, he keeps 4,000 breeders, does all the work himself. Bob Thurrell, East Wolfboro, New Hampshire, goes it one better with a worker caring for 12,000 layers. Bob doesn't say what the worker does other than keep the feeder operating, gather eggs and clean waterers.

Hand-Feed Pellets

Few poultrymen feed other than mash in the automatics and those who do run pellets and grain through them find it a bit unsatisfactory. Pellets are usually hand fed in the litter and so is grain.

"Broiler growth and egg production is as high with automatics as with hand feeding," say poultrymen and researchers. In fact, Pennsylvania found the timid birds had a chance for a "square meal," and gave higher initial production than a hand fed group. Later this leveled off. Walter Wood claims his New Hampshires lay better on an automatic. Considerably better? He's scratching his head over results.

Richard Caswell says that with enough big buildings like his 100x125 footer he could care for 100,000 broilers or replacement pullets, doing the work himself. Of course, he would want hot air heat and a positive working watering system. No one that I know of has the brooding capacity to check Caswell's estimates.

At Tracht and Roche broiler plants, workers are becoming mechanics, not poultry management experts. They go around with an oil can in their hand and a wrench in their pocket. Yet the

mechanical difficulties are not terribly serious and are being remedied.

Stephan H. Garjian, No. Abington, Mass. thinks he would go back to hand feeding if a young man. But now he's willing to forego the pleasure and let the automatic carry the feed.

Labor saving is slightly greater if the feeders are set up in the feed room near where bags of feed are stacked. Feeding flocks on second floor pens from a first floor feeder is for the future. But it will come. There are reported to be 35 feeders on the market or being built. I look to see bulk feeding come to some plants now made easier by automatic feeders. All in all, the reports look favorable. Automatics are here to stay.

— A. A. —

LEON TODD

POULTRYMEN throughout the Northeast will be shocked to hear of the untimely death of Leon Todd, managing director of the Northeastern Poultry Producers Council, who died at his home near Trenton, N. J., on Tuesday, October 24, at the age of 47.

Leon was not present at the recent NEPPCO meeting at Harrisburg, as he was called home by the death of his father. On the evening of Leon's death he had just returned from Philadelphia where he led a meeting of producers and market men interested in broiler production.

Previous to the time he took over the management of NEPPCO nine years ago, Leon Todd supervised the poultry projects of the Division of Markets of the New Jersey Department of Agriculture. Before coming to New Jersey he had been on the staff of the University of New Hampshire, the University of Michigan, the Pennsylvania Department of Agriculture, and Purdue University.

Surviving are his widow, the former Miss Henrietta E. Oswald of Butler, Pa.; three sons, Thomas Leon, John Miller, and William Robert; a sister, Mrs. Earl Wilson of Shavertown, Pa., and his mother, Mrs. William R. Todd, Honey Brook, Pa.

— A. A. —

BETTER FEED

At the recent NEPPCO Exposition at Harrisburg Dr. John Hammond made the following statement:

"In 1935 it required 14 weeks and 14 pounds of feed to grow a 3-pound broiler. This year poultrymen in 12 weeks are growing the same size bird with 12 pounds of feed. Within a short time they will be doing it in 10 weeks with 10 pounds of feed."

BABCOCK'S HEALTHY CHICKS

MAKE GREAT LAYERS

At the 1950 Storr's Conn. Egg Laying Test, our White Leghorns won first, all breeds with 3899 eggs and 4124.5 points. For the fourth time we won the high leghorn pen at the Georgia Test. Other 1950 records were good but not outstanding. In every test entered our Leghorns placed fifth or better. We still hold the all-time World's record for all breeds, all tests won in 1944-45.

WE HATCH THE YEAR 'ROUND White Leghorns, Red-Rock Cross, Rhode Island Reds and Barred Rocks own two hatcheries with 600,000 egg capacity, three poultry farms and 15,000 breeders. We carry on a complete pedigree-progeny testing program.

BE SATISFIED

In remodeling or repairing your home be sure to use reliable equipment and good materials. Patronize American Agriculturist advertisers and you will be satisfied.

Here is an ingenious arrangement which saves time in killing broilers and capons at the farm of Carl Schwaryer, Fayetteville, N. Y. Carl hangs the birds on rope shackles when killing, and then spins the wheel slightly and hangs another bird. By the time the first bird stuck returns to Carl, it is completely bled out.

↑ "Best poultry boys of the year" in F.F.A. program were named at the recent NEPPCO Convention Banquet at Harrisburg, Pa. Eleven were present to receive their awards at the annual A & P Food Stores' Youth Banquet. Left to right: Harold Beishline, Millville, Pa.; William McGuire, Hinkley, Me.; Keith Bower, Trumansburg, N. Y.; Fred Figarotto, New Brunswick, N. J.; Paul Heavener, Moorefield, W. Va.; Nor-

— Morse, Groton, Vt.; Russel Bruette, New Castle, Del.; Karl Zeigler, Glastonbury, Conn.; David Dymacek, Louisa, Va.; John Bruno of Agawam, Mass., and Robert E. Kelley, Derry Village, N. H.

← "Jimmy" Rice, known the world over for his work with poultry, was present at NEPPCO meeting and spoke at dedication of a new poultry library for Cornell. It will be known as the James E. Rice Library.

↓ Pennsylvania team of James Bower (left) of Irwin, and William Lazar, Jr., Jeanette, won top honors in 1950 NEPPCO 4-H Production Demonstration Contest.

Title of demonstration was "Poultry Cleaning and Dressing." Richard Warren (right), University of New Hampshire, extension poultryman, congratulates the boys.

↑ Winning team at NEPPCO F.F.A. Egg Grading Contest was Donald Griffin (left), Hudson, Mass., and Chester Foster, Hatfield, Mass. The future farmers, who excelled in judging interior as well as exterior egg quality, receive awards from V. A. Martin, Pennsylvania Department of Public Instruction.

← "Make a Lemon Meringue Pie" was a demonstration which won first place for Shirley Wilson, Rush, N. Y., in 1950 NEPPCO 4-H Consumption Demonstration Contest. Miss Lois Jean Smith, Pennsylvania State College, presents award.

NEPPCO 4-H Egg Judging Contest was won by Rhode Island team of Fred Austin (left), East Greenwich, and Fred Wertz, Hamilton. The team scored 341 of a possible 400 points. Congratulating them at annual A & P Youth Banquet is Owen S. Trask, University of Connecticut, who supervises this division of NEPPCO youth program.

Don't Miss This Thrilling Trip!

amazing Carlsbad Caverns, and two days in fascinating old New Orleans.

The list of all the wonderful things we'll see and do is too long for this space... but it's all in the illustrated itinerary, as well as the price of the "all-expense" ticket, which covers absolutely everything with the exception of one meal. Our party will again be escorted by Mr. Verne BeDell of the Northern Pacific Railway Company.

Decide now to take this glorious, carefree vacation. The price is reasonable, the accommodations and meals are the finest, you'll have folks you love for fellow travelers, and you'll be looked after to perfection by Verne BeDell. Write today to E. R. Eastman, *American Agriculturist*, Box 367-T, Ithaca, N. Y., for a copy of the itinerary. Don't delay, or you will be disappointed in getting a reservation.

Henry Sherwood, National Grange Overseer, Will Preside at Minneapolis

On the editorial page of this issue, you will find a tribute to the late Albert S. Goss, Master of the National Grange. Because the National Grange session, which opens at Minneapolis, Minn., on November 15, is so near, National Overseer Henry D. Sherwood of Pine Plains, Dutchess County, N. Y., left for Washington immediately on receipt of the news, to complete plans

for the National Grange session where he will be presiding officer. Mr. Sherwood is also Master of the New York State Grange.

Fortunately, Paul Taber of Ithaca, N. Y., who has been assisting Mr. Goss for some months, is familiar with the plans already made. Mr. Goss had completed his address which will be read to the National Grange.

BOOSTING MILKING SHORTHORNS

I HAVE at hand your publication dated October 7, 1950. I have always considered this paper of yours informative and progressive—up until now, that is. As of today I have my doubts.

My reasons are based on the omission of the various winners of Milking Shorthorn Contests at the New York State Fair at Syracuse. I know there were Milking Shorthorns because I was asked to consider showing animals there.

When you finish using a cow for milking purposes, her ultimate end is on the butcher's block. This breed's laurels at both ends of the farming business are fast becoming noticed and appreciated by an increasing number of enterprising farmers who want a cow that will "replace" herself when she ceases to be useful as a milk producer.

Consider the fact that we don't all eat bologna all of the time, but like a good steak occasionally, and please give space to the news about a breed that has everything, the modern cow that gives milk and butterfat without becoming a "bag of bones" while doing it.—Mrs. Steven Pinkowski, Whitehall, New York.

(Thanks, Mrs. Pinkowski. We didn't have the Shorthorn results when the Fair results we published were prepared. Here they are: Senior and Grand Champion bull—Last Chance General, Last Chance Ranch, Lake Placid, N.

Y.; Junior and Reserve Champion bull—Barrington Wildeyes, Grassy Lane Farms, Cazenovia, N. Y. Senior and Grand Champion Female—Imp Almer Misselthrush, 6th, Mystery Farm, Hope, R. I.; Junior and Reserve Champion female—Last Chance Bell Van Berg, Last Chance Ranch. Last Chance Ranch won premier breeder award. Ed.)

—A.A.—

A LOOK AT THE 1950 APPLE MARKET

(Continued from Page 7)

soundness of the apple deal once the fruit is in storage.

The Midwest has a much lighter apple crop than last year. The increase in the Southern crop is moderate and should find a ready market at home and to the West. The far Western crop is not sizing up due to a cool, late season, while the wastage in our area due to scarcity of packages, storage space in places, scab in some orchards and a sudden heavy late drop of McIntosh will be great.

Competing fruits are less than last year, while consumer purchasing power is at its highest.

But, above all, is the marvelous color and firm quality of this stored apple crop.

It is now up to growers and distributors to pack, distribute and promote this crop so that every potential consumer learns about these wonderful apples and can always obtain them in pleasing condition throughout a long, orderly marketing season.

**TWICE EACH MONTH
THIS PAGE
goes to
215,000 READERS
living in the Northeast**

It is a market place in which that great family of American Agriculturist readers turn for merchandise they need and YOU MAY HAVE FOR SALE. We know it works, because advertisers tell us how well pleased they are with returns and it is not costly.

If you have something to sell such as cattle, swine, sheep, poultry, dogs or other pet stock, used farm machinery, seeds, plants; or if you want to sell the whole farm, write out your ad and send it to us before the next closing date listed at the top right of this page. See rates and address top left.

By J. F. "Doc" ROBERTS

I AM meeting too many "blue" farmers this fall. To be sure, the weather has been unsettling and prices on practically everything our Northeast produces have not been good. Livestock prices on the whole have been good, but replacements and breeding stock have been discouragingly high. Farming and farmers have always been right eventually and they will be again.

Livestock prices are meeting their fall break. Hogs broke sharply, but seem to have leveled off at around 20 cents. If they can hold at about this price through the pork-packing season, which means for six or eight weeks, then after that there is every reason to believe they will advance in price. Hogs at present are money-makers for packers and producers, except perhaps for the man who had to buy all his feed. So again, generally speaking, the more home-grown grains we can feed, the more profitable our operation. Never expand your livestock operation over your available rough feed.

Cows, for meat, have also broken in price, but unless there are more cows in the country than I think there are, they are going to level off at about present prices. They should also work higher as we get further into the winter.

Cows for dairy purposes continue in very strong demand. Really good close-up cows or heifers are hard to buy at prices in line with the price of milk.

Calves and lambs have broken a little, but mostly the real good ones are about as high as ever, which means plenty high; best calves at around 38 cents and best lambs at around 30 cents, with few of any kind getting much below 25 cents.

Winter Plans

Here is what I am doing this winter. I have bought Holstein heifers, about 70, running from 550 pounds to 750 pounds; and while I bought them by the head, they cost about 20 cents a

FARM EQUIPMENT DEALERS HELP "BOOST MILK"

"What's good for the farmer is good for me"—that's the slogan of the Allegany County Farm Equipment Dealers Association. That is also the reason for their sponsoring the milk promotion sign which is located on Route 17 near Andover, New York. This is the second in a series of billboards planned by the machinery group. Officers of the group are in the foreground. This is believed to be the first organized group in New York State to support the "Milk for Health" program in this way. It is hoped that other business groups might follow this example, and support the business to which they are tied so closely.—H. I. Blixt

pound. I am going to feed both grass and corn silage along with hay and 3 or 4 pounds of ground corn a day. I hope to have them in good enough flesh any time after January to be able to market them for meat or to sort out the best and save to sell for dairy purposes.

Then about the middle of February I plan to buy 500 or 600 half-fat lambs from the West to shear within three weeks, and market as fat lambs—feeding up to 2 pounds of grain, until about the first of May. I am going to de-horn the heifers when cold weather sets in and when I am sure flies will not come back during a warm spell. I am also going to sort the heifers—feeding the lighter ones in one group and the heavier ones in another. I know from experience they will do better this way, for they will all be running loose.

What a shame to have discouraged the sheep, lamb and wool industry for the last 10 or 15 years, and now hold international conferences because there is not enough wool to meet world re-

quirements! This did not happen overnight; even we, right here in *American Agriculturist* years ago, were warning about the liquidation of the sheep industry, and that instead of it being encouraged it seemed as if everything was being done to discourage it. It will be a costly, slow process to bring sheep back to the many acres and many farms in the Northeast which are so well suited for their production. The few sheep farmers that are left with a good flock of ewes are in an enviable position.

Are you all ready for winter on your farm? Neither am I, as usual!

PENNA. DOUBLE DISPERSAL 70 REGISTERED HOLSTEIN CATTLE

It's Warm and Bright Inside!

THOSE cold, dreary winter days are not far distant. You can see them coming in the color of the sky and the landscape, and the bright, lazy days spent outdoors in the summer and early fall are only a memory now. But winter days need not be dull and dark within the four walls of your home, not if you prepare for them. This is how I go about it.

First of all, the house gets a thorough cleaning. The closets are cleared out. Tennis racquets and the like make way for skates and hockey sticks. White coats and summer frills are put away. Winter's sturdy garments come out of storage. Jean's snowsuit will fit Doris this year. Jean will have a new red one for her birthday. Dick's red cap is beyond mending, but the knitting lessons I took last summer will enable me to knit him a new one, and caps for the others, too. Those knitting needles will click a merry song for me, and mentally I picture the bright yarn I'll buy on my next trip to town.

One room after another I tackle. At the beginning of summer I had made the living room cool and inviting by taking down the heavy drapes and leaving just the frilled Priscillas at the windows. Now the drapes will hang in their old places again, bright red against the cream colored walls. Those pastel colored prints will make way for the more colorful pictures that I put away in the attic. There's a vivid garden scene an old friend painted. It will hang once more in its accustomed place over my desk, and in its bright colors I'll see again my garden, which will soon be covered with snow.

The gay knick-knacks we all love will come out of hiding to sparkle and laugh at us and with us. The books on the shelves must be rearranged so there'll be plenty of room for our old winter favorites as we read aloud during the evenings. The sewing machine comes in from the sun porch. Jean is learning how to sew, and we will make it a comfortable sewing party by the fire as father reads to us.

Big chairs that have been placed by the window so one could watch the sunset will now move toward the fireplace. A study corner is fixed up for Jean and Larry, who are sixth and

eighth graders this year. And there must be room for Doris and her family of dolls, and for Dick's blocks and cars.

My husband will want to go over his records and talk over the prospects of the coming year. Room must be made in the desk for his books and papers. He has a birthday coming up, and I plan to get for him a file case that he has been looking at for some time.

That long table that was kept bare this summer, with just a light runner, a vase of flowers, and a book or two will now be filled gaily. My potted plants will each have their turn on it. There'll be a bowl of bright red apples, nuts in another bowl ready to crack, and on some evenings there'll be bowls of popcorn or a plate of fudge.

That stack of magazines that we didn't have time to read carefully this summer . . . they'll join the crowd, and I'll enjoy having more leisure to read them, as well as my favorite books. I'll have time, also, to study new patterns and new recipes.

My garden comes inside, too. Every room in the house has its garden guest. Geraniums, cyclamens, begonias, the ivies and the philodendrons, and the Christmas cactus that shows every sign of being a thing of beauty by holiday time—all have their part in brightening up our house for winter.

In the dining room, warm copper candlesticks with bright colored candles come out of storage. Red

glassware comes to the front in the china closet. The low white bowl disappears from the center of the table

to make room for an old-fashioned copper bucket which on some days will hold flowers, the last of the chrysanthemums, and on other days will be heaped with apples, pears, and grapes from our own vines. Then,

again, I may fill it with gourds that we have grown and dried, or maybe one of the plants from the indoor garden will nod cheerily to us as we eat our meals.

Our meals will be served with plenty of color, and we will laugh over the trials of blackberry picking as we enjoy the tart jelly. The hours of weeding will be forgotten as we fill our plates with vegetables from our own garden.

In the kitchen, my collection of salts and peppers come out to display themselves on shelves and windowsills. My curtain shades will be up so

The shining antique mirrors, the gay checked curtains, the autumn foliage on the mantelpiece, the colorful picture on the wall, the flowered chair and sofa drawn up to the fireplace where on wintry nights a fire will be kindled, make this room sparkle and glow with color and light and happiness. —Photo courtesy General Electric Co.

I can enjoy watching my birds fly across the windows. They are saucy curtain pulls made of soft wood and painted in bright colors. Bluebirds, a redheaded woodpecker, a cardinal, all dangle there, cheering me as I work.

The days get shorter, the ground is frozen, snow has come, and we prepare for winter guests . . . guests who will not enter our home, no matter how cheerful it is, but they will twitter thanks for our thoughtfulness if we see that their table out in the garden is kept full of seeds and suet.

Mischief, our gray pussy, knows he will be welcome to curl up by the fire. Rover stretches out comfortably, and

Goldy trills happily in his cage as he pecks at the bit of red apple I have just given him.

I spread a red-checked cloth on the dining room table. The soup has been simmering for hours. There is a big pan of hot cornbread. . .

The children come in with red cheeks and gay laughter. The man of the house follows with a log for the fireplace.

"Snowing right along," he says, as he greets me with a kiss. "Everything will be white by morning!"

I look around the house. It is cheery and bright.

FOR ALL GIFTS

By ELAINE V. EMANS

For courage to wear within, as shoes without;
For loveliness to feed on, often as bread;
For certainty protecting me from doubt,
As well as roof, from weathers, overhead.
For laughter quite as much as livelihood,
For vision of tomorrow as for today
Already proven to hold its share of good;
For all potential friendships, Lord, I may
Discover and cherish, as for these now treasured;
For love within my heart as for the measured
Beating of it . . . and for all gifts which You
Gave and I may not have recognized as such
At first, but which You in Your wisdom knew
Were strangely right for me, I thank You much.

For Christmas Sewing

No. **3512**. Bonnet-pocket apron—a present that's both pretty and practical! Sizes small, medium, large. Medium, $1\frac{1}{2}$ yds. 35-in., $\frac{1}{4}$ yd. 35-in. contrast. (Another ample apron style also included in pattern.)

No. **2259**. Smart wardrobe stretchers: two weskit styles, a trim blouse. Sizes 10 to 20. Size 16, U-neck weskit, $1\frac{1}{2}$ yds. 54-in.; collared weskit, $1\frac{1}{4}$ yds. 54-in.; the blouse, $2\frac{1}{2}$ yds. 35-in.

No. **219**. From "left-over" materials make a little girl's favorite doll a complete new Christmas wardrobe. Please order by size for 14, 16, 18, 20 and 22-inch dolls. See pattern for the fabric requirements.

No. **2271**. Daughter's shawl collar

dress enhanced by ■ tidy weskit effect, the perfect choice for either wool or cotton. Sizes 2 to 10. Size 4, $1\frac{1}{4}$ yds. 54-in. fabric; or $1\frac{1}{8}$ yds. 35-in.

No. **3506**. Two ways to make this versatile tailored skirt—with pockets or fake-pocket flaps! Waist sizes 24 to 34. Size 28, with pockets, $2\frac{1}{2}$ yds. 35-in.; with flaps, $1\frac{1}{2}$ yds. 54-in.

TO ORDER: Write name, address, pattern size and number clearly. Enclose 20 cents in coins for each pattern wanted. Add 20 cents for our new Fall-Winter Fashion Book which has stunning pattern designs for all ages, sizes, and occasions. Send to **AMERICAN AGRICULTURIST PATTERN SERVICE, Box 42, Station O, New York 11, N. Y.**

Together We Can Do It

IF every woman in the United States knew that by going to the polls and voting on Election Day, November 7, she could help this Nation to maintain the kind of life that she wants for herself and her family, I believe it would not be possible to keep any woman from voting that day.

And yet the stakes are really that high. In this country, we do not have the "vote—or else!" kind of compulsion to vote that totalitarian countries have. We are free to vote or not to vote, free to choose the party of our choice. But if we fail to use this privilege, we will surely lose it.

Voting is not just the act of choosing candidates for political offices. It is also a demonstration of faith in the ability of the plain people of America—farmers and their wives, business and professional men and their wives—to govern themselves. One vote—your vote—may seem unimportant to you, but it is of transcendent importance to 150,000,000 other Americans. Together we can hold fast to our American heritage, together we can have the kind of America we want, together we can show the world that we care about America and have no intention of losing what we have.

I hope that for your sake, and your family's sake, and for the sake of all of us you will not fail to vote next Tuesday.

Mabel Hebel

NEW! IMPROVED!

3 WAYS BETTER

...say Cookery Experts

"Easier to use" says Ida Bailey Allen, world-famous food authority and well-known radio and television personality. "There's no long waiting, no 'special' directions with New Improved Fleischmann's. I've never known a yeast that's faster and easier to use."

"Faster dissolving" says Natalie Scott, cookery expert and editor. "It gets to work in jig-time. No other yeast can top it! All you do is combine New Improved Fleischmann's Dry Yeast with water, stir it well and that's all there is to it! You're ready to start."

"Faster rising" says Elizabeth Balmer, food authority and cookbook editor. "New Improved Fleischmann's actually cuts down rising time, and always gives finest results. It's more active than ever and stays active for months—just keep it in a cool, dry place."

Yes—America's foremost cooking authorities agree—no other yeast can beat New Improved Fleischmann's. You've never seen a yeast dissolve faster . . . you've never known any yeast that's easier to use! It stays active for months when kept cool and dry. It will stay active even longer, if you keep it in the refrigerator. When you bake at home, try New Improved Fleischmann's Dry Yeast . . . you'll see why cookery experts say it's the finest, fastest, easiest yeast ever!

AMERICA'S PRIZE-WINNING COOKS PREFER FLEISCHMANN'S YEAST

Earn money at home weaving rugs, carpets, etc. from old rags or new yarn—in your community! No experience necessary. \$1,000 doing it with easy running Union Looms costing less than \$60.00. Send for our free booklet today. UNION LOOMS, 64 Post St., Boonville, N. Y.

Housework Easy Without Nagging Backache

As we get older, stress and strain, over-exertion, excessive smoking or exposure to cold sometimes slows down kidney function. This may lead many folks to complain of nagging backache, loss of pep and energy, headaches and dizziness. Getting up nights or frequent passages may result from minor bladder irritations due to cold, dampness or dietary indiscretions.

If your discomforts are due to these causes, don't wait, try Doan's Pills, a mild diuretic. Used successfully by millions for over 50 years. While these symptoms may often otherwise occur, it's amazing how many times Doan's give happy relief—help the 15 miles of kidney tubes and filters flush out waste. Get Doan's Pills today!

The trend toward growing more grain in the Northeast brings the need for a feed grinder to many dairy farms. If interested, put your name and address on the margin of the PAPEC ad on page 15 of the October 7 issue. Mail it and the company will send you a booklet describing the PAPEC hammer mill.

A folder describing the use of penicillin ointment in treating mastitis is available from E. R. SQUIBB & SONS, Veterinary and Animal Feeding Products Division, Dept. AA-10, 765 Fifth Ave., New York. A postcard will bring it.

Hybrid chicks are proving as profitable as hybrid corn. For the story, fill out the coupon on page 12 of the October 7 issue and send it to the DEKALB AGRICULTURAL ASSOCIATION, Dept. AA-3, DeKalb, Illinois.

"Meat and the Mississippi River" is the title of the newest book in Swift's Elementary Science Series. Write to SWIFT & COMPANY, Agricultural Research Dept., Chicago 9, Ill., and ask for Booklet "G."

The August 1950 issue of "Beacon Flashes," published by BEACON MILLING COMPANY of Cayuga, N. Y., was the 31st anniversary number. It contained many interesting comments about the development of the company.

THE SAM DANIELS MANUFACTURING CO. of Hardwick, Vt., announces an easily-installed auxiliary heater which burns wood. The company will be glad to send you a descriptive folder on request.

FRICK SAWMILLS are now being manufactured in a new shop at Waynesboro, Pa. If interested, drop a card to the Frick Company at the above address for an illustrated descriptive folder.

Based on a remarkable discovery made at the University of Wisconsin, a new rat killer known as Ratu 42 is being offered by the DR. DAVID ROBERTS VETERINARY COMPANY, Waukesha, Wisconsin. This new product contains a chemical which prevents the blood from clotting normally and death is caused by internal hemorrhage.

Diesel tractors are rapidly coming to the front. If you would like more information about them, just fill out the coupon on page 17 of the September 2 issue and send it to R. H. SHEPPARD COMPANY, DIESEL TRACTORS AND IMPLEMENTS, Hanover, Pa.

Once again it's time for Mr. Dairyman to set up a barber shop for Bossy and give her the haircut she badly needs. Cow's udders and flanks need clipping so that manure and other debris will not cling to them. Clipping at this time of the year will materially aid in improving the quality of milk and will reduce the time necessary to clean the cow in preparation for milking.

Hot Bread for Breakfast

By ETHEL M. EATON

EVERYBODY likes piping hot bread for breakfast. It does something for this first meal of the day — especially if it's dressed up a bit—and is a pleasant change from the everlasting toast. Many breakfast breads are quickly made; and often the process can be speeded up still further by mixing part of the ingredients the night before.

CORN AND RICE BREAD

- 2½ cups milk
- 2 eggs, well-beaten
- 2 cups corn meal
- 3 teaspoons baking powder
- 1 teaspoon salt
- 1 tablespoon melted butter
- 1 cup boiled rice (cold)

Pour the milk gradually into the eggs. Sift together the corn meal, baking powder and salt, and add to the egg mixture, beating thoroughly. Then add the melted butter and cold boiled rice, pressed through a sieve. Beat until very light. Turn into a well greased shallow pan and bake in a hot oven, 400° F., for 30 minutes. Be generous with the butter when serving! Yield: 8 servings.

BREAKFAST BUN

- 2 eggs, separated
- 1 cup sugar
- ¾ cup milk
- 1 cup flour, sifted
- 2 teaspoons baking powder
- ¼ teaspoon salt
- 1 tablespoon cinnamon
- 1 tablespoon melted butter

Beat two egg yolks and one white with the sugar until frothy. Stir in the milk. Sift together the flour, baking powder, salt and cinnamon and add to first mixture, mixing thoroughly. Add melted shortening and beat well. Pour into a greased narrow loaf pan and spread with icing before putting into oven. Bake in a moderate oven, 350° F., for 25 minutes. Cut in slices and serve hot. Yield: 6 servings.

ICING

- ¼ cup butter
- ¾ cup confectioner's sugar
- 1 egg white, beaten stiff
- 1 teaspoon cinnamon

Cream butter and sugar. Add the egg white and cinnamon. Spread over the unbaked bun mixture.

PRUNE COFFEE CAKE

- 2 cups sifted flour
- 3 teaspoons baking powder
- 1 teaspoon salt
- ¼ cup sugar
- ¼ cup shortening
- ½ cup light cream or evaporated milk
- ½ cup juice from stewed prunes
- 8 stewed prunes, sliced
- Sugar and cinnamon

Sift together flour, salt, baking powder and ¼ cup sugar. Work in the shortening until the mixture resembles coarse meal. Combine prune juice and cream and add to flour mixture, stirring quickly but thoroughly. Spread batter in a shallow, greased cake pan. Cover top with sliced prunes and sprinkle with sugar and cinnamon. Bake in a hot oven, 425° F., until delicately browned — about 20 minutes. Yield: 8 servings.

SALLY LUNN WITH BRAZIL NUTS

- ¼ cup shortening
- ¼ cup sugar
- 1 egg, well-beaten
- 2 cups flour
- 4 teaspoons baking powder
- ½ teaspoon salt
- 1 cup milk
- 1 cup chopped Brazil nuts
- 2 tablespoons sugar
- ¼ teaspoon cinnamon
- 1 tablespoon butter

Cream shortening, add sugar, and cream together until light and fluffy. Stir in beaten egg. Sift together flour, baking powder and salt, and add alternately with the milk to the first mixture. Stir in two-thirds cup of Brazil nuts, chopped fine.

Pour batter into a buttered eight-inch square pan. Mix remaining nuts with the two tablespoons of sugar and the cinnamon and sprinkle over the

batter. Dot with butter. Bake in a moderately hot oven, 375° F., 35-40 minutes. Cut into squares and serve hot, with or without butter. 6 servings.

SAUSAGE RICE MUFFINS

- 2 cups flour
- 5 teaspoons baking powder
- 1 teaspoon salt
- 1 egg, slightly beaten
- ½ cup cooked rice
- ¾ cup milk
- 2 tablespoons melted shortening
- 6 pork sausages

Sift together the dry ingredients. Combine the egg, rice, milk and shortening. Fold this mixture into the dry ingredients. Pour into lightly greased muffin tins and stand one-half a sausage upright in each one. Bake in a hot oven, 425° F., for 20-25 minutes. Yield: 12 muffins.

BUTTERMILK CAKES

- 2 cups flour, sifted
- 1 teaspoon baking powder
- ½ teaspoon baking soda
- 1 teaspoon sugar
- 1 teaspoon salt
- 1½ cups sour milk or buttermilk

Sift together the dry ingredients, then gradually stir in the buttermilk or sour milk to make a dough that can be handled. It may be necessary to add a little more liquid. Turn onto a floured board, roll to one-half inch thickness, cut into four-inch rounds and bake slowly on a well-oiled griddle, turning once. Baking takes from eight to ten minutes. Split and serve very hot with butter. Yield: 8 servings.

NEEDLEWORK BOOK

IF YOU like to knit, crochet, tat, embroider, or transform your home with pretty new drapes, slip covers, lamp shades, pretty quilts and crocheted rugs, then you'll want to have a copy of our American Agriculturist Needlework Book. It is full of charming, inexpensive gifts you can make, and the patterns cost only 15 cents each.

The book also contains ten "free"

patterns, including 4 pages of drawings and instructions for redecorating your living room. It tells how to plan a color scheme, make the curtains, slip covers, etc., to carry it out. To get a copy of it, write to Needlework Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y., and enclose 15 cents in coins.

WHAT'S GONE BEFORE

"No Drums", a story of what happens to home folks in time of war, started in the September 2 issue. Mark Wilson, living in a typical farm neighborhood in southern New York at the opening of the Civil War, is in mental conflict about answering Abe Lincoln's call for volunteers and leaving his sweetheart, Ann Clinton, a neighboring farm girl.

Henry Bain tries to steal Ann away from Mark, a fight follows, and Mark lays down the law to Ann. Finally, Mark decides to enlist and he and Ann are married in a surprise dramatic ceremony in the little church before a large congregation.

In common with millions of other boys who go to war, Mark's joy in his wedding is marred by the necessity of telling his bride the day after the wedding that he expects to enlist that day. After a difficult parting from the home folks they leave together with horse and buggy to make the trip to the county seat, where Mark is to enlist.

CHAPTER V

IT WAS nearly noon when Mark drove into the livery stable in Owego and put up his horse. Then, rather hesitantly, he and Ann made their way to the little waiting-room across the hall from the bar in the Ah-wa-ga House to wait for the call to dinner. It was an entirely new experience for both of them to be in a hotel, and they looked around curiously.

The room was furnished with a long, uncomfortable-looking, leather-covered sofa and several chairs to match, and in the center was a marble-topped stand. Over the mantel, evidently left from the last political campaign, was a life-sized poster of Abraham Lincoln. Hand in hand they stood gazing up at the homely face, and as always when Mark heard the name or saw a picture of the gangling Western giant who had been elected to the White House, it did something to him. Apparently it had the same effect on Ann, for suddenly she whispered:

"He's good, Mark! He's good! And I think he's right. I'm glad you're doing what he wants."

The dinner bell rang and they entered the dining room to find it filled with several small tables seating from four to six people, each table covered with red cloth and the inevitable revolving cruet stand, with half a dozen bottles of ketchup, horse-radish, vinegar, pepper and salt. Some tables were already occupied by men, and more were coming in. Two bored-looking, rather ancient waitresses were carrying in the food—generous dishes of potatoes, roast beef, thick brown roast gravy, boiled cabbage and big slices of home-made bread for each table, with a choice of coffee, tea or milk.

As the only woman in the room, Ann at first felt shy and embarrassed, but it was so evident that eating was the main interest of the men, including the two at their table, that her own healthy appetite soon asserted itself, and both she and Mark made a hearty meal of what seemed to them the most delicious food they had ever tasted.

By the time the waitresses came to take orders for the several kinds of pie with cheese, the diners had become more sociable. One of their table companions, a dapper, rather loudly dressed individual in his thirties, winked at the other man and, looking meaningfully at Mark, inquired:

"What's your line, friend?"

Not understanding, Mark said: "Line?"

"Yes, line. What do you travel for?"

Sizing him up quickly and not liking his attitude, Mark answered:

"For my country."

The other man, who looked like a quietly dressed business man, laughed.

"I guess he's got you there, my friend," he said to his companion. Then to Mark he said:

"I take it that you have enlisted or are going to?"

"That's right," agreed Mark.

"Taking the girl along, too?" asked the salesman, with another wink.

This riled Mark.

"If it's any of your business," he snapped in a little louder tone, so that some of the other nearby men turned to look, "this girl is my wife."

"Aha!" said the salesman, not easily squelched. "Just married, eh?"

At this Mark started to rise, but the older man intervened.

"Take it easy, boy. This fellow doesn't mean to be rude. And as for you, I'd like to be right back in your shoes, starting all over again, with such a pretty little bride."

"No, I didn't mean nothing," said the salesman. "Just tryin' to be sociable. So you're going to enlist, eh? Wished I'd time to take a nice little vacation like that."

"By jiminy!" said the other, indignantly, "I wish you could, and maybe it would take some of the cockiness out of you. 'Little vacation' indeed! You may have your wish before we get

through with this matter and get that kind of a 'vacation' yourself. It would do you good. And in the meantime, those of us who are staying home for one reason or another need to show a little appreciation for what these boys are doing for us. Look at our young friend here—just married and now they have to separate. 'Vacation' indeed!"

As they all got up from the table, the salesman walked out of the dining room, but the other man came around to Mark and Ann.

"I'd like to shake hands with you and your bride," he said. He gestured to the other diners and several of them came over, introduced themselves and shook hands, wishing the young couple luck. So cordial and sincere were the greetings that, after the men left, Mark and Ann felt as if they had been among friends.

"Now we'll see about getting a room for tonight," said Mark to Ann, "and you can rest while I go over to the recruiting office, or maybe you would like to take a walk. I don't know how long it'll take, but I'll be back just as soon as I can."

A little later, Mark found his way to a couple of small rooms on the ground floor of a vacant store building which served as the recruiting office. In the front room was a hard-faced Army recruiting sergeant and a clerk. Lined up in front of the desk were a group of young men waiting their turn. When Mark's turn came, the sergeant yelled:

"Another farmer! Look at 'em!"

He wrinkled his nose in disgust and waved his hands at the line of boys and men back of Mark, most of whom were obviously off the farms. Half scared and uneasy in their ill-fitting clothes, they were an awkward-looking lot.

"How in God's name we'll ever make soldiers out of such stuff I don't know," snarled the sergeant. Suddenly he shouted:

"Stand up straight!"

Mark didn't know whether the order was directed at himself or all of the boys, but he pulled himself erect. Then the sergeant began to fire questions at him, the clerk took down the answers. The questioning finished, the recruiting officer motioned him to an adjoining

room.

"Get in there and get your clothes off!"

In the other room Mark shed his clothes and, shivering with cold and nervousness, joined the other naked men who were working up one by one to the Army surgeon at one end of the line. In spite of the chilly room it was close in there, and rank with the odor of sweat. When Mark's turn came, the doctor thumped his chest, then dropped his ear to his chest to listen to his heart. He made no comments for a time, but his keen eyes looked approvingly at Mark's finely muscled body. Then he said:

"Practice sucking in your guts, son; chest out, shoulders back. Get that plow-handle stoop out of your shoulders while you can." Then, with one last look, he added:

"You'll do! Get your clothes on and report back to the officer in the other room."

When Mark returned to stand again before the recruiting officer, the man actually smiled, giving Mark the impression that his bark was worse than his bite. He gave Mark the oath, and then remarked:

"You're in the Army now, boy, and you'll soon be moving."

"How soon?" Mark summoned up the courage to ask.

"Don't know for sure. Never know nothing in the Army. But maybe tomorrow. Anyway, you're on your own for tonight. Report back here in the morning."

Outdoors Mark drew in great gulps of the spring air and almost ran back to the hotel and Ann. He found her waiting in the decrepit old Boston rocker by the window of their room. As soon as he opened the door, she ran across the room and threw her arms around his neck, clinging to him tightly:

"I was scared for fear they'd keep you and I wouldn't see you again," she cried. "How was it? Did you get in all right?"

"Yes, darling, I'm in the Army."

"Can you come back home with me?"

"No, dear, the sergeant says we'll probably go South soon, maybe tomorrow." Then, in an effort to cheer her he added: "But you know what they all say—that it won't take long. I'll be home before you know it, and in the meantime we can think and plan what we'll do when we are together again."

He led her across the room, pulled her down on his lap in the rocker, which groaned dismally under their double weight. As he looked around the room he laughed, a little ruefully. In addition to the chair, the furniture consisted of a wash-stand, on top of which was a large white washbowl and a pitcher half filled with water which probably had been there for weeks. One or two hard-bottomed chairs and the bed completed the equipment. But the bedstead itself was large with a deep feather bed, and the brightly colored homemade quilts were attractive. Reading his thoughts, Ann said:

"Mark Wilson, don't you go to criticizing. This is our first home, all by ourselves, and wherever we are, whatever we have or don't have, we have love, and nothing else will really matter much."

First to awake again next morning Mark found himself dreading the day. Why, he thought, had he been so foolish as to enlist and go away from his wife when she needed him and he needed her? How would he ever stand the separation? What did one man more or less in the Army mean anyway? Why did he have to go barging off when he had so much to stay home for? There were thousands just as able and as duty bound to enlist as he. Why couldn't he have had sense enough at least to have waited a while?

Looking at Ann sleeping by his side, (Continued on Opposite Page)

(Continued from Opposite Page)

her soft lips parted, one little hand outstretched as if reaching for him, her young breasts rising and falling with her gentle breathing, a lump came into his throat. He breathed a prayer:

"Dear God, take care of her and take care of me, so that we can soon be together again and live like other folks."

Then he felt better, for it seemed that God gave him the answer as to why he had enlisted. It was the memory of that grave, homely countenance on the poster downstairs, the deepset, sad and burning eyes of Abraham Lincoln, the new President of the United States.

Ann stirred, opened her eyes, and smiled at him lovingly. With great tenderness he took her in his arms, his restraint and gentleness telling her of the sadness that lay on his heart.

They had breakfast in the hotel dining room, where several of their friends of the day before greeted them smilingly but refrained from breaking in upon their time together. Breakfast over, they went back to their room. They made a pretense of being very busy packing up their few things, but finally Mark turned to face her:

"Well, sweetheart, it's time to go. We've got to face it."

"Yes, Mark."

Dry-eyed, she clung to him briefly, then together they carried their belongings downstairs and went to the livery stable, where the attendant hitched the horse for them. Climbing up over the buggy wheel, Ann gathered up the reins, gave Mark a crooked smile, slapped Molly gently with the reins, and drove off, never trusting herself to look back or to wave.

As she drove up North Avenue on her way out of town, Ann saw a column of men led by a fife and drum corps swing out of a side street into the Avenue ahead of her. She pulled Molly to one side to let them pass. There were seven or eight men in the drum corps, with bass and snare drums led by four fifers, and at first Ann heard only the loud rat-a-tat-tat of the snares, punctuated by the deep boom, boom, boom of the big drums. Back of the little band were twenty-five or thirty men in civilian clothes trying to keep step and to look as soldierly as possible. As they came abreast of the buggy, the fifes suddenly began to shrill and the drums changed their rhythm to keep time with the tune. Familiar as Ann had been with that old tune all of her life, never before had it had any particular significance for her. But now as she mentally fitted the words to the melody they somehow expressed the loneliness and pain in her own heart:

I'm lonesome since I crossed the hills
And parted with my Peggy;
I'm lonesome since I crossed the hills
And left the girl behind me.

As she listened and watched the procession pass on down the Avenue, she thought of the thousands of men and boys, and especially her own Mark, marching away to that same tune from the girls they had left behind them. Then for the first time she gave way to tears.

When finally she picked up the lines and spoke to old Molly, who had been dozing by the curb, she thought half humorously that it must be nice to be a dumb animal and care about nothing but eating and dozing in the shade. Driving back up the valley she thought how all the joy that she and Mark had experienced the day before had now given way to pain, all the shining brightness that had been a part of their happiness—the sunshine, the song of the birds, the green of the fields—were gone.

But at last the long, lonesome journey ended and she gave the horse over to Charlie Wilson to unhitch and went into the house. Mark's mother looked at her white, drawn face and said,

cheerfully:

"We've been waiting supper for you, my dear. You're one of the family now. Wash up at the sink. The roller towel is over on the right. And come eat."

"That's right," said George Wilson, heartily. "We've saved a place for you at the table and there it is." He pointed to Mark's vacant chair, and in a further effort to distract her he blundered on:

"That's Mark's place, and I know of no better person to fill it while he's

away than his wife."

But Ann smiled at him gratefully and attempted to do her part in maintaining the matter-of-fact talk around the table, though she ate little. When the meal was over, George and the two boys went to the barn, and Ann helped the girls and their mother to clear the table and wash the dishes. Ellen and Elizabeth were more than usually willing to help clear up tonight, proud to show their new sister how they could work. (To be continued)

For rugged construction . . .

ARCTICS. Flexible, easy-fitting, warm fleece lined, long wearing. Four and five-buckle heights.

For wear and protection . . .

MODERNE. All-rubber with slide fastener on the inside for a smooth line with ankle-covering flat-tery and protection.

Look for the Farm Favorite Ball-Band

KNIT GAITER. The original knit gaiter. Worn with Ball-Band Rubbers or Arctics gives you the warmest cold weather combination you ever wore. Long wearing, flexible.

Look for the RED BALL on the sole

Yes, you know you're getting sound, honest footwear quality when you look for the Red Ball trade-mark. For over 50 years Ball-Band has been doing the footwork on the farm . . . a truly tough wear test. KERNELS, SCREENINGS and CHAFF

HERE AT HAYFIELDS

By Tom Milliman

NEW YORK generally stands 5th in acreage among bean growing states and usually about 5th in yield per acre. The leading state is California, with Michigan, Colorado, and Idaho following in that order. New York ordinarily grows about 150,000 acres of dry, edible beans, but in 1950 had only 136,000 acres.

Of New York's acreage, about 72% are red kidney beans and 20% the little white pea or Navy bean, with the balance made up of marrow or marrowfats, white kidney, yelloweyes, etc. Hayfields grows pea beans because we are in the pea bean district west of the Genesee River, with 15 acres this year. We've tried red kidneys, which practically always sell for more money per pound, and found that our yield of reds was considerably less than the lower-priced little white beans. So we're content to stay in line with the kind of beans the section finds most worthwhile in dollars per acre.

East of the Genesee, few white beans are grown and the crop is almost universally red kidneys, stretching as far east as Oswego and in all the Finger Lakes area. The knowledge that soils west of the Genesee are a little lighter and higher in lime, with drier harvesting weather, does not completely explain why pea beans do better there while red kidneys yield more in the heavier soils to the eastward. We must be content with longtime trial and error findings without knowing all the reasons why. Dry bean production has been an important cash crop for much more than 50 years and many a farm has been paid for by beans.

However, with the gradual return of corn for grain to western New York, the start of a shift away from dry beans, especially pea beans west of the Genesee, is in evidence. Farmers are beginning to find that grain corn is a profitable cash crop in place of beans. Many factors, including government programs and high transportation and handling costs of Mid-Western corn for Northeastern use, are contributing to the shift to corn. As an example, Hayfields has just sold 12½ tons of dry shelled corn from the 1949 crop to make room for the oncoming 30 acres of 1950 ear corn to be machine-picked in early November. This was surplus above feeding requirements. The seed for an acre of beans costs much more than the hybrid seed corn required for an acre. Cost of growing each crop is about the same. Harvesting beans is far more expensive than machine picking of corn, although this may be offset by the fact that corn must be stored in open-air cribs. Grain corn is returning to an area

from which it almost entirely disappeared when silos came in, and western corn was very cheap.

Now grass silage is becoming popular and helps the shift.

WASHING UDDERS

IMAGINING myself doing the tedious job of washing, boiling, and drying a mess of washcloths once or twice a day, I realized that on such a side issue I couldn't be depended upon to do it daily or to do it thoroughly. How then could I ask others to do it? Consequently, we never started washing cows' udders with damp cloths, for fear of spreading mastitis instead of reducing it.

Then came the paper towels for washing udders. After looking into it carefully and conferring together, for a little less than \$6.00 we bought a bale of 3,700 tough paper towels measuring 10" x 10¾". Other sizes and makes are available. Marion, our cowman, better known as "Stub", had seen a milking demonstration at the annual field day at Gannett Farms in L. B. Skeffington's charge, and was ready for it. After a thorough trial, here's what Stub has to say:

"Now we've got a little electric water heater in the cow stable. I draw off a pailful, add a jigger of chlorine preparation, dip the towel in the water, wash the cow's udder and drop the towel in the gutter. I move the pail along and do three cows at a time, one towel for each cow, keeping ahead of the three machines. The udders are cleaner, my hands are cleaner, and our milk is cleaner. The cows 'give down' faster and hold nothing back. Now I do the milking 5 to 10 minutes faster than before. Maybe I make a few more motions, but with less stripping, the whole job of milking is easier. A few of the cows give a trifle more milk this way."

After trial, Jim and I are sure we

COMBINING SPEEDS BEAN HARVEST

Modern dry bean threshing or combining on a neighbor's farm in Monroe County, N.Y. The man standing to right of tractor driver, with a pitchfork tosses out the larger stones and tosses in any bean vines which may be missed by the pickup conveyor. The dry beans are bagged at the rear of the moving thresher, while pods, vines, stones and dirt are dropped to the ground. A tractor-attached bean puller has previously cut and lifted the standing beans into windrows. Because bean combining is faster, its use grows, although it is not radically cheaper than the old method of pulling, bunching and hauling to the barn for threshing.

THE LAST TEAM DOESN'T LEAVE

The most beautiful sight at Hayfields is this team of Belgian 7- and 8-year-old geldings, standing side by side with their heads over the pasture fence watching a tractor work. Realizing that we have hardly any machinery to which horses can now be hooked, I let a young farmer talk me into selling them for \$250 with harness. When the lad changed his mind and begged off, my spirits rose. In winter the team eats the sweepings from the cows, and in summer they do a little work but are mostly at grass. Who knows but what a team of horses may be priceless, should the flow of gasoline and repair parts be interrupted!

are benefiting the consumer, the cows, the milker and the farm by the use of cowbarn paper towels, at a cost of about a dollar a year for each cow. It was Jim who figured out that an inexpensive towel dispenser, hung on the wall, was worth a trial, and got one. Now we have four dispensers, two for each side.

SILAGE CAP

TO stop the big waste of silage, grass or corn, which occurs when a silo is filled and left unused, we've been searching for years for something to prevent spoilage. Apparently one of the big rubber companies has something which fills the bill. It is a circular covering made of plastic and of a diameter somewhat greater than that of the silo when filling is completed, with the center of the silage higher than the edges. When the lightweight circular covering is placed, it turns up all around the edges. Then

what is called a water roll, of the same material, is put around the circumference just inside the plastic cover. When filled, the water roll presses against the sides of the silo to exclude air and seals the whole thing.

In June we filled a 12' x 40' tile silo with alfalfa-ladino-brome and placed the plastic cap and water roll seal. The silage settled considerably and in early October the cover was removed for refilling with corn. Settling had been uniform all around the silo, except at the chute where it was lower, and it was here that a little spoilage occurred. All the rest of it was green and bright.

Not over 400 lbs. of spoiled silage had to be tossed down the chute and taken away.

Cost for a 12 foot silo is not over \$47 and the device is said to be good for 15 years.

FARMERS TOO

AFTER inspecting pastures with five eminent specialists from early morning 'til 8:00 o'clock in the evening, we went to supper at a Howard Johnson restaurant near New Brunswick, N. J. That day we had seen a few fine new things, not all of which carried college recommendations. When I asked my companions to point to something significant, Dr. M. A. Sprague, Research Specialist in the Dept. of Farm Crops at Rutgers University, responded. He said:

"Farmers who go ahead with new ideas before agricultural colleges can establish specific recommendations for them are benefactors to the colleges."

Dr. Sprague's utterance grew in value as I thought it over for days afterward. It served to bring out the reason why colleges seem sometimes to be slow on their feet. They have to be sure. You and I wouldn't respect a college which went off half-cocked on a new thing.

Your New Silo— PLAN IT NOW!

Plan a new Craine silo now. Plan, too, for more farm profits, time and labor savings — and the pride of ownership that's yours with a handsome, dependable Craine.

You know that good silage provides the most profitable, efficient feeding. And you'll find that a durable Craine silo is *not* an expense. It's an *investment*—and like other farmers, you'll say "My Craine is the best investment I ever made!"

CRAINE'S THE NAME

The early buyer gets seasonal discounts—better service. We'll send full details, including easy payment plans. No obligation—just drop us a line.

Craine, Inc., 1110 Pine Street, Norwich, N. Y.

CRAINE SILOS

Fresh bog spavin? "Clear it up fast with **ABSORBINE**"

says C. W. Pace of Longmont, Colorado

"As soon as I see signs of bog spavin, puff or soreness on my horses, I use Absorbine. That's the treatment advised by our veterinarian, and I have been using it for over 16 years."

Yes, farmers know there's nothing like Absorbine! It's not a "cure-all," but a time-proved help in relieving windgall, collar gall, and similar congestive troubles.

A stand-by for over 50 years, it will not blister or remove hair. Only \$2.50 at all druggists. W. F. Young, Inc., Springfield, Mass.

Service Bureau

By H. L. COSLINE

CATTLE RUSTLERS ACTIVE

Farmers in Oneida, Herkimer, Madison, and Cortland counties in New York state have been recent victims of a cattle rustling gang. Police are investigating in an attempt to break up a gang which has stolen animals in recent weeks worth thousands of dollars. While farmers in Onondaga County have not reported losses, there is some indication that the stolen animals are being killed in a Syracuse slaughter house. Authorities are hunting for it.

To get down to cases, a farmer near Bridgewater lost a six-month-old heifer, and the next day another one was taken from a farm pasture near Sangerfield.

Seven Holstein heifers were stolen from the Warren Fitch farm at Poland recently. Two cows were taken from the Spencer Sauer farm at German Flats, and Martin Cole of Sangerfield had two heifers stolen from a pasture less than 100 yards from his house.

These are just a few of those who suffered losses. Until the gang is broken up it is important that you take whatever precautions you can, that you check up frequently, and, if you have animals stolen, that you notify the nearest State Trooper immediately.

GUN SHOP "MOVED"

My friend and I sent checks totaling \$317.80 to the Cold River Gun Shop in Alstead, N. H., in July of 1948. We were promised delivery on two different dates, but our high-powered rifles never showed up. The last letter we wrote them was returned by the Post Office stamped "Moved, left no address."

The above letter was received back in January. Since then the Service Bureau has been making every effort to trace the operator of this outfit, one Martin Owen. Alstead has no Chamber of Commerce, which complicated the matter considerably. We finally located a reliable source of information there and were given the following data.

For a short time Martin Owen operated the Cold River Gun Shop at East Alstead, but he seems to have disappeared. Reports are that he has been heard from twice—once from Michigan and once from Florida. Apparently Mr. Owen is no longer in the Northeast; but if he should happen to turn up around these parts again or if anyone knows of his present whereabouts, the Service Bureau would appreciate word. Write us at Box 367, Ithaca, N. Y.

— A. A. —

CHRISTMAS CARDS

For several years we have reminded you about this time that you can buy Christmas cards from Leopold Roy, South Main Street, Richmond, Vermont.

Leopold is a victim of arthritis and has been in bed for the past 19 years. But in spite of that he maintains a mail-order business in greeting cards and magazine subscriptions. If you will drop him a card he will be glad to send you a folder.

He tells us that previous notes in *American Agriculturist* have resulted in some excellent repeat customers. We are glad of this because we admire his courage and independence.

— A. A. —

One of our subscribers is very anxious to learn the address of Leonard S. Dunk, formerly of Whitehouse Station, N. J. If Mr. Dunk should happen to see this item, we would appreciate his writing us; or if any subscriber knows his whereabouts, we would be grateful for the information. Address Service Bureau, Box 367, Ithaca, N. Y.

“\$5,440⁰⁰ RETURN IN 1ST YEAR

from 65-acre Renovated Pasture...

PASTURE RENOVATION MADE THE DIFFERENCE you see in these two photos, taken at HUB FARM, owned by S. J. REYNOLDS, Wappingers Falls, N. Y. Above, taken July '49, shows thin, weedy growth, practically no feed at all. In photo at right, taken July '50 in the same field, Mr. Reynolds shows the thick, lush growth of good legume-grass, which yielded 3½ tons per acre when cut for hay early this Summer. Now 20 acres of this 65-acre field are being pastured, and the rest of the field has an excellent 2nd crop of hay in the making. Read details, below.

“A.A.C. Soil Service and 18% NORMAL Superphosphate Have Done a Real Job for Me!”

Says S. J. REYNOLDS, of HUB FARM, Wappingers Falls, N. Y.

“OPERATING on a planned grass farming program, we are carrying 85 head of registered Holsteins on a farm which had been abandoned for 18 years,” writes S. J. Reynolds, of Wappingers Falls, N. Y. “Here is the kind of results we are getting:

“Last year we had your A.A.C. Soil Service analyze the soil of a 65-acre field to be seeded to legume-grass. We applied 1½ tons lime per acre and then had 18% NORMAL Superphosphate, 800 lbs. per acre, applied by Spreader Truck, a big time saving. We disked and cultipacked, making a first-class seed bed.

“\$900. SAVING ON SILAGE”

“We seeded Brome, Timothy and Birdsfoot Trefoil, followed by Ladino Clover on July 15, 1949. We got an excellent stand, and on Sept. 1, 6 weeks after seeding Ladino, we turned in 36 dry cows and heifers for 60 days. Usually at this time we had been feeding silage, so this good grazing saved us 70 lbs. of silage per head per day—or 75 tons during the 60 days—a \$900. saving, at \$12. a ton for silage.

“This Spring, the legume-grass did so well I decided to cut it for hay. A year ago, this field wasn't producing a bit of feed, yet this July we cut 3½ tons good legume-grass hay per acre—227 tons from the 65 acres, worth \$4,540., at \$20. a ton.

“\$5,440. GAIN IN LESS THAN YEAR”

“Add the \$900. saved on silage and you see that renovating this pasture has already returned \$5,440.

“On August 4, we turned 36 head onto 20 acres of this pasture, fencing off the rest to be cut for a 2nd hay crop. With high-protein feed like this I can see possibilities of feeding less grain and maintaining high production levels—our herd will exceed 400 lbs. butter fat on DHIA test this year.

“This shows the quick, profitable results from pasture renovation, particularly when you KNOW where you are going, by getting the facts through A.A.C. Soil Service. By topdressing with 18% NORMAL—or AGRICO PHOSPHATE & POTASH, if potash is also needed—we will keep this pasture at top production.”

START THIS FALL to renovate run-down pasture—send for free copy of booklet, see below. And don't forget to topdress good pasture with 18% NORMAL or Agrico, to maintain and improve the stand of clovers and good grasses. See your nearby Agrico Dealer now.

AGRICO® Fertilizers and 18% NORMAL® Superphosphate

THE FARM PAPER OF THE NORTHEAST

Better NUT TREES for Northeastern Farms

By L. H. MacDANIELS

THE arrival of autumn with its frosty nights and bright colored foliage sets farm and village folks to thinking about gathering nuts. To older people who were farm reared come nostalgic memories of the big hickory that used to stand in the south pasture or the black walnut in the valley along the creek. They may recall the thrill of filling their coat pockets with shining brown chestnuts, and the rivalry among the neighborhood boys to harvest the crop from trees bearing nuts with particularly large or meaty kernels.

The nut tree situation has changed through the years. True, many hickory and walnut trees still stand here and there on the farmsteads, but in general the trees have been cleaned out of the fence rows and cultivated fields to make provision for more intensive farming. The chestnut blight has all but destroyed the forests of these great trees that used to be so plentiful throughout the Northeast and now have for the most part disappeared altogether. Even their dead and barkless trunks have decayed and vanished.

There also has been a change in the temper of the people. Harvesting, drying and cracking the wild nuts seems to be too great a price to pay for what is recovered, particularly if the delicatessen store is available with nut kernels already prepared, even though their price does seem exorbitantly high.

Some aspects of the nut tree situation have, however, changed for the better. Through the years there has been a search to find the better kinds of nuts. The Northern Nut Growers' Association was organized more than forty years ago, and State associations have grown up in Pennsylvania, Ohio, and elsewhere. Contests have been held offering

prizes for the best trees found in the fields and woods. One of these, sponsored by *American Agriculturist* some years ago, is an example. As a result of these activities, many varieties of native nut trees have been selected, propagated, and are now in the process of being tested.

The United States Department of Agriculture and some other agencies have been active in breeding varieties that are resistant to the blight disease and have already made substantial progress. These new chestnut varieties will not replace the wild native trees in the forest, but under favorable conditions they do succeed in dooryards and are well worth planting.

The search for hardy Persian or English walnuts has also been fruitful in securing the Crath strain from North of the Caucasus Mountains. These trees are hardy under temperatures of 30° below zero and some of the seedlings promise to be well worth propagation. During the current season the Northern Nut Growers' Association is holding a contest to locate the best varieties of these hardy walnuts which have developed from seed planted some years ago.

After these years of selection, testing and investigation of cultural needs, the limitations and possibilities of nut growing in the Northeast are becoming better understood. From this experience it is evident that with the possible exception of the Chinese chestnut, there is little basis for a successful commercial industry in growing hardy nut trees in this area. There is, however, every reason to encourage the planting of nut trees around the farmstead and around the house in suburban areas where there is room. The improved varieties of hardy nut trees now available are as much better than the ordinary run of wild nuts in the ease of recovering the kernels as the Northern Spy or McIntosh apple is better than the wild fruit from seedling trees in the pasture. Too many people still remember bringing home inferior wild nuts only to find the chore of cracking and picking out the kernels too great for the returns. It is little wonder that after hammering a hard nut until it explodes and then retrieving the fragments of the kernel from the far corners of the room, interest in nut trees subsided for many.

It is quite true that at the present time there are no black walnuts or hickory nuts that can be compared with the southern pecans for the thinness of shell and the ease of

TOP: Chinese chestnuts, tasting very much like native chestnuts, will grow on acid soils in Northeastern areas where fruit trees thrive.

—Photo by USDA Bureau of Plant Industry.

SECOND: Heartnuts, shown here in clusters, grow rapidly. The trees have a tropical appearance and the nuts have a mild, butternut flavor. The rule shown for comparison in this picture and the one below is 6" long.

THIRD: Hybrid filberts grown in the Ithaca, New York, area.

BOTTOM: Thomas black walnuts, the kernels of which crack out into quarters with little waste.

(Continued on Page 6)

The best answer yet to winter driving on northeast farms is this tread—the Unico Extra-Traction. It has plenty of pull both backward and forward. The long buttons dig in and bite, not only on unplowed roads, but in muddy lanes, rutted driveways, and slushy yards.

From now until late spring there will be many days when you need extra traction to get in or out. Often on the same trip you will drive over some plowed or even bare roads.

These tires are built for just such conditions. The lock-grip buttons are long and deep to give a positive hold on a loose or sloppy surface. The grip along the side takes hold of ruts. They don't get clogged up easily with mud or snow. Yet they run smoothly on dry roads.

Many farmers get through the winter on Unico Extra-Traction tires without ever once putting on chains. See your G.L.F. Service Agency for tires built for rough weather driving.

Cooperative G.L.F. Exchange, Inc., Ithaca, New York.

UNICO EXTRA-TRACTION TIRES
...a G.L.F. Service

Grange Master Sherwood Hits "Statism"

WHAT seemed to be a trend toward socialism last year now seems to be a rush toward socialism," Henry D. Sherwood, master of both the New York State and National Grange, warned 1,200 delegates in his annual address at the 78th session of the State Grange at Elmira, New York.

He lashed out at what he called a "philosophy of statism" by President Truman's administration, saying, "We have seen politicians brazenly buying the favor of unthinking people by offering security without work, safety without courage, salvation without character; in short, by offering a something-for-nothing system of doles, subsidies, pensions and hand-outs which every sane person knows can only bring us all finally to poverty and slavery."

Sherwood, discussing highways, said that proper laws should regulate weight loads on the highways, which are for the people, so that the legal rate will not destroy them. He also urged that the weight limits be rigidly enforced. "As rural people we need adequate means of moving our produce from our farms to markets. We need good roads the year around and we need railroads for long hauls especially. There must be a middle ground which will give opportunity for all to serve and be served."

Mr. Sherwood has headed the Empire State Grange, which with its 142,518 members is the largest of any state, for seven years and was inaugurated as National Master following the death, October 25, of Albert S. Goss. He had been Overseer of the National Grange. Mr. Sherwood of Pine Plains, Dutchess County, N. Y., is considered a leading candidate for election to the National office at the National Grange annual meeting in Minneapolis this month.

1,500 Get Degree

A class of more than 1,500 took the Sixth Degree at a program in the State Armory and heard Carroll Bean, High Priest of Demeter, say that world events had convinced him of the need of universal military training; and that the Grange, teamed up with schools, churches and service clubs can stop Communism by making known the real facts about Communism.

Another highlight of the session was the singing contest, held as a pre-convention feature. Solo winner was Charles House, Avon; with Mrs. Sally McAllister, Gouverneur, second; George Falk, Corfu, third. Duets: First, Helen and Helena Fowler, Lyons; second, Mrs. Florence Mabe, Harriet Shawl, Onondaga County; third, Mr. and Mrs. Clinton Sabin, Sherburne. Quartets: First, Robert and Richard Shuart, Charles Potter, Edwin Simonson, Steuben County; second, Rebecca Coffin, Myra May, Alice Robidou, Margaret Feters, Dutchess County; third, Jerry Loomis, Walter Fletcher, Kenneth Lamb, Bill Hosic, Oneida County.

Winners of the American Agriculturist Achievement Awards, in the form of engraved gold medals, were: Miss Audrey Morehouse, 16, Garratts-ville; and Willis Simpson, Jr., 16, Port Jervis. This contest for outstanding leadership and accomplishment in Grange and other activities for the past year was open to Grangers under 21 years of age.

Resolutions

During the four-day session, representatives of the State's 896 Granges approved the many reports from officers of

the Grange, were entertained by some excellent programs. However, of the greatest importance was the action the delegates took on nearly 100 resolutions. Of most general interest were the following:

The Grange Opposes:

Manner in which welfare is financed and administered in New York; and payment of cash to recipients.

Establishment of Regional fairs by the State Dept. of Agriculture.

Any form of compulsory health insurance or any system of socialized medicine.

The allotment and inspection of wheat acreage.

Federal aid to education "for the best interest of all concerned and our national welfare."

Divorce of extension service from Farm Bureau in all states because of abuses in a few; and "any bill that would make an extension agent just a mouthpiece of the U.S.D.A."

Communist candidates having their names on any ballots for county, state or national public office.

Any modification of the legal responsibility of the City of New York for any damage caused by efforts of city to induce rainfall.

The Grange Favors:

Study by the Conference Board of Farm Organizations, of state, county and town highway financing, design and conservation; including, "An increase in big truck license fees so that they pay a fairer share based on use and benefits, of the cost of thoroughfares. . . . a reduction of the axle weight limits of trucks to the 18,000 pound weight recommended by the American Association of State Highway Officials . . . vigorous enforcement of truck weight laws to prevent damage to our roads and to reduce the safety menace of the highway boxcars," and, "more money from State collected gas tax and fees for rural road improvement, this money to come from savings in constructing less costly heavy-duty truck highways and reduction of maintenance expense as a result of lowering truck weight limits."

A plan providing a guaranteed source of revenue for highway purposes through the progressive earmarking of motor vehicle and gas tax revenue

State assuming responsibility for damage to motorists caused by collisions with legally protected wild deer.

More stringent laws and more rigid enforcement of traffic laws.

Strict enforcement of laws pertaining to covering wells and cisterns.

Reducing legal voting age from 21 to 18.

A support price under agricultural commodities to prevent ruinous prices to agriculture; and vigorously opposes present form of subsidies and price supports.

Making every effort to have a complete machinery exhibit at all future State Fairs.

Issuing motor vehicle licenses only after applicant has furnished evidence of financial responsibility.

Giving school pupils more than one bottle of milk a day if they want it.

Cooperation with every agency to help reduce farm accidents.

"The blizzard's over-and they're already working on our line"

THE fury of the elements may strike in any community.

Smashing winds. Floods with lands and buildings under water. Raging fire. The crushing weight of sleet and freezing rain.

When such emergencies occur in Bell rural areas, telephone crews converge on stricken communities from every direction. Western Electric, our manufacturing and supply unit, rushes in poles, wire, and all kinds of equipment and

parts from the nearest warehouses. Work doesn't stop until telephone service is restored.

Telephones are our job. We have the skilled men, the tools and equipment. We're prepared for day-to-day work, and we're prepared for emergencies. This is particularly important right now when the nation depends on the telephone to get things done and done fast.

BELL TELEPHONE SYSTEM

FALSE PROSPERITY

IF we take 100 as the index figure of prices for the period from 1910 to 1914, then the index of farm prices in New York for July 1950 had increased to 233, or 2½ times what they were at the beginning of World War 1. Retail food prices had increased to an index figure of 263, or about 2½ times what they were from the base period.

Prices of articles farmers buy had an index of 256 in July of this year, costs of dairy farming were at 300, cost of living at 244, and earnings of factory workers at 511. In other words, the earnings of most working men in the United States have increased over five times what they were in 1910-1914, while the cost of living has increased less than 2½ times.

Remember these figures when labor bosses and politicians claim that wages should advance several cents an hour whenever the cost of living goes up only a very small fraction.

One of the grave injustices caused by the wild inflation which we are suffering now is to the widows, orphans and older people trying to live on an income from savings which would have been enough in ordinary times but which is not nearly enough now to buy even the necessities of life.

The politicians who brag about our present prosperity are wrong. It is false prosperity, based on inflation, on ruinous government spending, and on taxation fast getting to a point where no individual or business can continue to live and operate.

TRIBUTE TO THE EGG

AFTER criticising our government for continuing to permit the Red Communists of China to ship unwholesome dried eggs into this country, my friend, Editor John Pickett of the California Farmer goes on to pay tribute to our own clean, fine American eggs.

"A good, fresh American egg," says John, "is one of nature's great protective foods. The average American hen is much better fed than the average American person. She gets a well-balanced ration. The egg which she produces is in effect a vitamin pill. It is rich in minerals and vitamins. It is easily digested. It transmits health and pep to human beings.

"The poultry industry is the most widespread American industry. It gives employment to a great many people. It has the service of many fine scientists and commercial concerns which help make it a good American industry in sanitation, careful handling and excellent distribution of a fine product.

"American poultry meats and eggs deserve our support and our acclaim."

To all of which sentiment, John, we of *American Agriculturist* give a hearty Amen. We'd like to add, also, that the egg and other poultry products fit in well with the gospel Ed Babcock used to preach about animal agriculture. Take the poultry, the dairy and the meat products, balance them with vegetables and fruit, and you have a diet unbeatable for health and energy.

SAVE YOUR FEET AND BACK

IONCE made a little survey of the time it took to do chores in the dairy barns of several of my friends, and in every instance I found that with a little planning, and without too much expense, literally miles could be cut off the distances these farmers walked to do their chores.

This is the time of year when work at chore time steps up, so it is a good time to take an hour or so off and make a careful study of the steps that you take at chore time, with the thought of cutting down the labor.

One important point to remember, also, is that the average age of farmers is higher. We are getting older. It is more difficult and more dangerous, therefore, from a health standpoint, for farmers to have

By E. R. Eastman

to lift and carry weights of feed or other supplies long distances at chore time. Some figuring along this line may save some backaches or even a physical disability.

GET SUPPLIES WHILE YOU CAN

REMEMBER what grief you had trying to get new equipment, machinery parts, and other farm supplies during the last war? Well, we are in a war now. God forbid, but it may become another World War. So it is good business to look ahead and make sure that you can operate without difficulty next spring. Now is the time to see that your machines are all in shape for next year and to order repair parts and new machinery if you need it.

The use of commercial fertilizer is increasing rapidly. There is always a rush in the spring. Talk to your supply dealer now and get his advice about how much you should buy, whether or not it will keep, and how it should be stored.

SHE CAN'T BUY GOOD POTATOES

AT a farm meeting the other day a woman with a large family said to me:

"We don't grow potatoes on our farm. I used to like 'em, so did my family, but now that we are buying them at the store, we aren't eating half the quantity of potatoes that we once did because they are so poor in quality."

Hardly a week goes by that some village or city consumer does not make a similar remark to me, but this one was unusual because it came from a farmer's wife.

The local market for potatoes is a large one, at least it could be if growers and their organizations could find some way of putting on these local markets a consistently high quality potato, attractively packaged, and could convince the consumer that the quality would continue to be good. One of the problems, of course, is to keep the potato good after it leaves the grower's hands. I raise excellent eating potatoes on my own farm, but I have to keep them in a warm cellar, where the quality deteriorates rapidly. The same is true for potatoes stored too long in warm stores.

GOOD FOR CHRISTMAS

IN his latest novel, *THE SETTLERS*, Mr. Eastman deals with that strange urge that led whole families, after the Revolution, to pick up their belongings and plod westward. Nate and Constant Williams, whom readers of Ed Eastman's former books met in *THE DESTROYERS*, appear again in this new novel. Though thirty years older, they are as full of adventurous spirit as ever, as they and their family and friends decide to leave their farms in Columbia County, New York, for the long westward trek.

The adventures they met on the trail, their arrival in the Genesee country, how they tamed the woods, founded their homes, raised their crops and made a living for themselves and their families are so well portrayed that the reader will not soon forget either the characters or the history in this fine novel. Send \$3 for a copy to *American Agriculturist*, Department S, Savings Bank Building, Ithaca, New York, and don't forget to order copies for your friends for Christmas.—*I.M.L.*

GET READY FOR INCOME TAX REPORT

FOR me one of the most disagreeable jobs of the whole year is doing the income tax report, and I know that most of you feel the same way. There is always the fear that one will make a mistake, and that Bureau of Internal Revenue representatives will bring it up after all the details of the report are

forgotten. Sometimes it's the other way around and you pay too much tax by not making all of the allowable deductions.

One answer to this difficult problem is well-kept books. It will soon be time to make out these obnoxious reports; therefore, now is the time to get prepared and check up on your facts and figures to be sure that they are right and up to date.

GOOD FALL

"What wonderful — perhaps phenomenal is the best term—weather we are having just now. However, this is not the first nice autumn on record. In 1883, so my father told me, we laid a long string of excellent stone walls, a job that no farmer thinks of doing at this time. Most of that wall was laid in December and there was no trouble from snow and very little from frozen ground."

—Jared Van Wagenen, Jr.

WHATEVER we may say of this unpredictable Northeast climate of ours, we usually get a very nice fall. That's just the way it should be, for it gives farmers an opportunity to get everything cleaned up for winter and plenty of fall plowing done.

FLUID MILK CONSUMPTION IS DECLINING

DAIRY farmers of the Northeast should take note of the fact that right here in this great dairy section the nation is drinking 11% less milk today than it did five years ago. Ralph Eastwood, executive secretary of "Milk for Health," points out that the northeastern dairy farmer "must sell fluid milk to survive. He cannot live on prices of manufactured milk because of interregional price-cost competition from the dairy belt of the Midwest . . .

"The answer to the problem is to advertise fluid milk. The average boy or girl could drink twice as much milk as he now does and the average aged adult should drink at least five times as much as at present."

Mr. Eastwood's statements are supported by health authorities. The older we get the more milk our bones need.

Fortunately, the "Milk for Health" campaign is going well. About 35,000 dairymen from New York and Pennsylvania ship milk to New York City. More than 28,000 of these shippers have signed up to allow deduction of 1 cent a hundredweight. Supporting the campaign of "Milk for Health" are the Dairymen's League Cooperative Association, the Metropolitan Milk Bargaining Agency, Eastern Milk Producers, the New York State Grange, the Grange League Federation and the Farm Bureau.

EASTMAN'S CHESTNUT

SOME of the best chestnuts I get come from the good old State of Vermont. Here's one sent in by my friend, Harold F. Johnson, Secretary of the Federal Land Bank of Springfield. Harold says:

"Hale Nye, who has charge of the St. Albans (Vermont) branch office for the Production Credit Association, owns a farm and also gets quite a kick out of hunting and fishing. He says that he has a pretty intelligent hound dog, and that he does quite a business in muskrats during the winter season.

Hale has a bunch of boards made up of varying sizes to set the various sizes of muskrat skins, and as each skin dries and he takes it off the board, he shows the board to the dog. The dog goes out into the nearby swamp and a little later returns with a muskrat whose hide is just the right size to fit the board from which the dried skin has been removed.

"Hale says that about two weeks ago something very unfortunate happened. The dog was in the kitchen at the time that Mrs. Nye dragged the ironing board out of the closet. The dog took one look at the ironing board, dove through the open door and hasn't been seen since!"

AA's Farmers' Dollar Guide

ANY FARMER who could predict what farm products will bring and what farm supplies will cost could easily plan his 1951 farming. The first point to remember is that the present situation is entirely different than in 1941. The general price level is much higher, and, in contrast to '41, industrial production has been going full tilt. Also the number of unemployed is much smaller. It is unlikely that we will see the increase in industrial or farm production, or the rapid increase in consumer buying power that occurred at the start of the last war. At this time it seems wise to continue conservative farming rather than make an all-out effort to produce to the limit.

PRICES: The best guess is that all prices will continue to go up slowly. Labor is in the process of getting more wages, and prices will certainly follow. While no famine of supplies needed for farming next year is expected, it will be good business to buy and get early delivery on supplies such as fertilizer, seeds, spray materials, etc. The farm labor supply will be tight. The best advice we can give, if you have a man you consider essential, is to talk with your draft board before he gets his induction notice.

CONTROLS: Government allocation of materials to manufacturers is an effective way to control production. The gossip is that farm machinery will get good consideration.

It is doubtful that price ceilings or rationing will be applied soon. Many economists doubt their effectiveness. If the supply is too big, you can't make people buy at any price; and if the supply is too low, you can't stop people from paying more than ceiling prices in the black market. However, it is predicted that controls will tighten up after election.

FEED: Feed is plentiful. Prospective tonnage is about 2 per cent over last year which was second largest on record. Prices will continue high, partly because government is supporting prices of wheat and corn. The relation between feed and milk should not change drastically. Northeastern dairy-men and poultrymen can well consider growing more grain, particularly on land which they may want to take out of cash crops such as potatoes, cabbage and vegetables.

PRODUCTION IN 1951: 1951 production will depend on the war situation, government policies, wages, acreage and weather. It is predicted that defense spending will be at the rate of \$25 billion to \$30 billion a year by mid-year, compared to \$12 billion before Korea. It is obvious that government will use no brakes on farm production but will encourage production to the limit.

Increased industrial wages will up the cost of all farm supplies as well as cost of marketing farm products. As always, farmers will plant the acreage and plan the number of animals which they think will be the most profitable. Weather will be the biggest single factor affecting production. Recent predictions from Washington about bigger 1951 farm profits than last year are more optimistic than this writer is willing to accept. The big question is whether or not farm income will increase enough to balance increased costs.

For dairymen the outlook is approximately the same as last year. Eggs may be lower if price supports are withdrawn January 1. Cabbage is now a glut on the market. Some vegetable growers have had a bad year; potato growers likewise. If northeastern farmers do not increase the acreage of vegetables, they may expect better prices than in 1950.

THINGS TO DO: To sum up, this is a time for close study of situations as they develop. Play the game conservatively and be ready to change plans on short notice.

Get acquainted with new social security requirements if you hire farm or domestic help. You will have to begin to file reports January 1.

Begin to pull records together for your income tax report. —Hugh Cosline

The Song of the Lazy Farmer

THE trouble with most folks today is that they don't have any way of blowin' off the steam that's built while they are workin' at full tilt. The pace of life is faster now than constitutions will allow, unless we quit work now and then so we can settle down again. But people just won't stop and sit to let their nerves unwind a bit, and most are never at their best because they don't know how to rest. Result is weakened hearts and minds and ills of many other kinds; their ulcers jump, blood pressure's high, they can not eat like you and I, and when they finally have to quit they get no joy or good from it.

The secret of good livin' lies in laying out a plan that's wise. That doesn't mean you have to be as much opposed to work as me; some folks can work from morn to night and still feel perfectly all right, because they know how to relax when they begin to overtax. They take a minute here and there to

stop and get a breath of air, or if the chores slow down a bit they always make the most of it; and when a full day's work is done they look for ways to have some fun. Why fuss and stew the whole night through about what you have left to do? Don't fret about another day—it might not show up anyway.

Above: Rot in this Wisconsin barn, less than 10 years old, called for extensive repairs.

Below: Thermopane in fixed sash was installed in the south wall of the remodeled barn. Forced ventilation was added. Relative humidity (which averaged 85% in winter in a number of barns in this area) was thus brought down to an average of approximately 55% in this barn. Healthier for livestock. Maintenance reduced.

How to get MORE DOLLARS FROM THE SUN

Sunlight makes your buildings warmer, drier and more sanitary in cold weather. These conditions pay off in healthier livestock and poultry and in better production . . . put dollars in your pocket.

HOW TO DO IT

Take advantage of radiant solar heat. Install large windows facing south—windows without light-robbing cross members. To keep heat inside, use *Thermopane** insulating glass—two panes with dry air hermetically sealed between them. *Thermopane* makes windows self-insulating. It stays in all year.

Thermopane reduces heat loss during cold weather. More sun heat and animal heat is kept inside—more feed dollars can go into milk, eggs and meat; less into keeping animals warm. Operation of auxiliary heaters is reduced.

Thermopane reduces sweat and frost because the inner pane stays warmer. This means less rotting and rusting of sash or the structure beneath—less time and money for repainting or replacement.

Thermopane is sold by glass and building supply distributors and dealers. Write for our new booklet, "Improved Farm Building Daylighting".

Thermopane

SELL HER MILK!

Her calf doesn't need it
...with **KAFF-A**

The safe replacement for milk!

Raise healthy calves on vitamin-high Kaff-A! A million healthy heifers have already been raised on Kaff-A. It's the safe replacement for milk... the one you can be sure will produce healthy calves! So don't take a chance on an inferior imitation of Kaff-A. A nickel saved on feed may cost you many dollars if your cows turn out to be poor milkers because of lack of proper nutrition during their starting period. Be safe! Feed Kaff-A! Its vitamin content is known! Kaff-A has a nutritious dried buttermilk base. It also contains other dairy by-products, some cereal products, plus plenty of Vitamin A and D Feeding Oil!

Every box gives you up to 500 extra pounds of milk to sell! Just 1 lb. of Kaff-A replaces 10 lbs. of milk in calf feeding! That means every 50 lb. box of Kaff-A fed with low-cost hay and grain can release as much as 500 lbs. of milk you can sell! And you'll find that adds up to a handsome profit!

Easy to feed! Just mix one part Kaff-A to 9 parts of warm water, and begin to feed on the 4th day! By the 10th day your calves will be weaned! So feed Kaff-A and sell your cow's milk! Kaff-A is the safe replacement for milk!

Better Nut Trees

(Continued from Page 1)

cracking. There are, however, varieties of black walnuts in which the kernels can be recovered in quarters with comparative ease, and there are hickories which yield almost 100 per cent whole halves. The filberts or hazelnuts, the chestnuts and the Persian walnuts give no problem of cracking.

For best results only grafted trees of known varieties should be planted. The possible exception is the chestnut, grafted trees of which sometimes show stock-scion incompatibility. Good seedling strains of chestnut are available.

Nut trees require fertile, well drained land, though it may be rocky and rough. It should not be expected that nut trees will become established on poor, soggy soils. Neither should it be expected that nut trees will become established and bear good crops under conditions of neglect. However, if planted on good soil, nut trees, once established, will thrive without much care.

It should be understood, also, that for most varieties of nut trees a growing season of 150 to 160 days is necessary between the late spring frosts and early autumn frosts. This means that the growing of the better varieties of nut trees is confined to the milder parts of the Northeast and, particularly, to the areas where fruit trees grow well. Exceptions are the butternut and some kinds of hickory, which succeed in a relatively short season.

Bearing Age

Nut trees vary greatly in the amount of time before they come into bearing after planting. In general, grafted trees will bear earlier than seedlings, and trees which are well taken care of will bear much earlier than those which are neglected. In fact, with serious neglect, the trees may never bear.

Some kinds of nut trees are precocious. Among these are the Chinese chestnuts, which may produce a few nuts within two or three years after planting and appreciable crops at 5 or 6 years of age. Grafted butternuts and the filberts also bear early. Sometimes grafted butternuts will bear a few nuts in the nursery row. It is more likely, however, that it will be 5 or 6 years before appreciable crops are borne. The filberts will bear at 3 and 4 years from setting. Black walnut trees bear at 5 and 6 years after setting, with good crops at 8 and 10 years.

There are now a considerable number of nurserymen handling nut trees. In general, nut trees are much more difficult to propagate and dig than other kinds of fruit trees. For this reason they are more expensive, ranging in price from \$2.00 to \$5.00 per tree, depending on the kind and size. Seedling trees are much less expensive, usually retailing for around a dollar.

Varieties

Of outstanding merit among the kinds of nuts that should do well in the Northeast and which are available in the trade is the Thomas black walnut, which has been grown successfully over a wider area than any other variety. Another good variety of black walnut is the Snyder. This won first prize in the *American Agriculturist* sponsored contest some years ago,

Among the hickories, the variety Wilcox has given good results in the vicinity of Ithaca. The variety Nielsen from Michigan also gives promise. The Glover has been satisfactory under many conditions. The first prize nut in the *American Agriculturist* contest held in 1934 was the Davis, which also has fruited well on grafts.

The butternut is the hardiest of all the northern nut trees. The Craxey and the Kinneyglen are good cracking varieties and trees are available. Nuts resembling the butternut are borne by

the Japanese walnut and its variant, the heartnut. These are handsome, rapidly growing trees, but are not always hardy enough to stand the winters except in the more favored sections. The Stranger and Walters heartnuts are good varieties.

The Crath seedling Persian walnuts have shown real promise in the Northeast. Their introduction has been too recent to be sure of just what varieties will be most suitable. Seedling trees are well worth a trial. One variety, the Littlepage, shows promise and is available in the trade.

The Chinese chestnut and its hybrids seem very promising as sources of chestnuts on the home place. They do best on somewhat acid, light, well drained soils. Chestnut trees must be cultivated or mulched and receive care much as fruit trees would be cultured.

The filbert or hazelnut succeeds in most parts of New York state, except in the north and at high elevations. The hybrids of the American species are the most promising. Two of these, the Bixby and Buchanan, are available from nurserymen. The New York State Fruit Testing Association at Geneva, New York, also has some varieties available in limited quantity.

Setting Trees

In planting most kinds of nut trees, particularly the hazelnuts, the chestnuts and the hickories, it is essential to have at least two varieties of trees growing near each other in order to provide cross-pollination.

The search for northern nut trees bearing nuts with superior cracking quality still goes on. *American Agriculturist* readers will be of real service if they will send samples of unusually good cracking nuts to the New York State College of Agriculture at Ithaca, N. Y., where a bulletin on nut growing is available on request.

For better living on the farm, the planting of named varieties of nut trees is well worthwhile. Growing the trees makes an excellent hobby. Harvesting and caring for the crop is fun for the youngsters — and nut cookies, nut cakes, and nut pies are delicacies that are not excelled by any other product of culinary art.

NATIONAL WINNER

HERBERT MCFETRIDGE, a 1950 graduate of the Geneva, New York High School, won first place in the Future Farmers of America National Speaking Contest held at Kansas City, Missouri, recently. He spoke on the subject, "Farm Price Supports." The contest was held in connection with the National Convention of the Future Farmers, which convenes annually in the Kansas City Municipal Auditorium.

What Do YOU Think?

By JIM HALL

DRIVING along Highway 20 a few weeks ago, enroute from Albany to Cazenovia, New York, I decided to take some silo-filling pictures. A little way out of Albany I saw a load of corn at a silo but no one around, so I drove on.

At another place there were two loads of corn, a tractor all belted to the chopper and every sign of silo-filling, but again nary a soul could I find though I roamed all through the barn. This happened four times. Finally, 'way over Cherry Valley way, I went to a farm house to see what in heck had happened to all the farmers. There was the farmer, the hired man and the whole family clustered around a television set. It was the first day of the World Series!

Such is progress! Last year I could keep up with the ball games as I went from farm to farm because everyone had a radio hooked up near the silo. This year everyone and his uncle knocked off for a couple of hours to watch the game from the comfort of their living room. How typical it was of our Northeast farmers that they took the whole crew in to watch the game. That little unexpected time off makes for a happy hired man, a man who isn't going to grumble when it's necessary to work a little faster or longer to save a crop.

One-Man Promoter

Cruising along toward Cherry Valley in Otsego County, I saw a sign alongside the road that made me stop. I was glad I did because I had a chance to visit with Andrew Jamba who thinks dairymen should take a greater interest in selling their product.

The sign shown in the accompanying picture is of a giant milk bottle bearing the words, "Did You Have Your Milk Today." It demonstrates Andrew's idea that all dairy farms should display a sign of some kind to remind passing motorists that milk is good for them. "Why, right here on Route 20 as many as 10,000 cars a day pass my farm during the tourist season. That means more than 30,000 people might see it in one day" he told me.

Andrew says it doesn't matter much what's on the sign just so it uses the word "Milk." He says that just "Drink Milk" or "Milk For Health" would do a world of selling if displayed on every farm. What do you think of his idea? Should farmers paint such signs on their barns or on signboards alongside the road or would it be a good idea for milk handlers or Milk For Health, Inc. to distribute such signs to members for them to put up?

Andrew Jamba has about 65 head of

Andrew Jamba painted this sign and erected it alongside busy Highway 20 near Cherry Valley, N. Y. He'd like to see something similar on every dairy farm.

purebred Holsteins, including 40 milkers, and averages 10,000 of milk with 350 fat despite the fact that he uses no silage of any kind. The 150 tillable acres in the 500 he owns in two adjoining farms is all in grass. Some hayfields 15 years old are kept producing with lots of manure and 300 to 400 pounds of superphosphate per acre every 4 years. The farm he bought three years ago has all been plowed and seeded to alfalfa, ladino and timothy, and because he figures this land is short of potash, it gets 300 to 400 pounds of 0-20-20 instead of the super.

Andrew is of the opinion that if feed prices don't rise and if milk stays over \$4 a hundred, dairymen will do all right, but he still says they ought to do something about advertising their own product themselves. What do you think?

Back To The Farm

And just to prove that all farmers along Route 20 didn't take time off to watch the World Series on their television sets, we are printing below a picture of Ernest Ballou of West Winfield, Herkimer County, who was born and raised on a farm but left it for construction work. "I didn't go back to farming until 5 years ago," he told me, "and that was the biggest mistake I ever made. Either I should never have left the farm or I should have gone back to it years sooner. There's no other life like farming."

I asked him why he was working when everyone else was watching the World Series. "Oh," he said, "work comes first." Then he grinned and added, "Anyway, I don't have a television!"

Ernest Ballou, left, of West Winfield, N. Y., and his hired man, Phillip Carey, are shown putting away the last of 17 ~~cars~~ of silage corn which will be fed, along with grass silage, to Ballou's 46-cow herd.

2,300 Attend 30th Annual G.L.F. Meeting

GOVERNMENT controls are in the immediate future, even to prices and wages," James A. McConnell, general manager of the Cooperative Grange League Federation Exchange, told more than 2,000 stockholders gathered at Ithaca October 26 for the cooperative's 30th annual meeting.

Dean William I. Myers of the New York State College of Agriculture welcomed representatives of the 108,000 G.L.F. farmer-members in New York, New Jersey and Pennsylvania to the meeting held in Bailey Hall. It was the first time in 16 years that a G.L.F. annual meeting had been held at Ithaca. In recent years the annual meeting has been a two-day affair held in the big armory at Syracuse.

Members learned in reports from Mr. McConnell, President Frank M. Smith, Assistant General Manager C. N. Silcox, and E. V. Underwood, secretary-treasurer, that the Exchange is in the soundest, strongest position in its history.

President Smith, in his annual report, cited four outstanding accomplishments of the year:

1. The financial structure of our institution has been placed on a basis calculated to withstand shocks resulting from troublesome times ahead.

2. The membership policy of G.L.F. has been strengthened by making voluntary investment, as well as voluntary use, the keystone of a sound membership.

3. The board has continued improvement of services through careful investment in new facilities.

4. The board has established an area marketing policy. The first move under this policy was setting up a Western New York Marketing Cooperative, with a fine farmer board of directors.

Mr. McConnell, who has been employed by G.L.F. for all but two years of its existence, said in his 14th annual report as general manager that a man didn't have to have any inside information to see that more government controls are coming, "as one control begets another."

"We have made some mistakes while trying to bring better services to farmers," McConnell said. "But each mistake has led us all to firmer ground. Committee actions taken during each year give us a different G.L.F. at the end of each year, maintaining a flexibility in services and facilities to meet the needs of members."

Farmer-members have invested \$4,500,000 of new capital in the organization in the past year, which McConnell termed "an amazing demonstration of confidence in the policies of your cooperative." A year ago a lot of us were anticipating a long deflationary period and tighter credit, but the Korean war changed the trend and set in motion great inflationary forces, McConnell stated. "We still dwell in very

—Photo: C. Hadley Smith

The 30th annual meeting of G.L.F. stockholders at Ithaca was strictly a business meeting. Three of those who addressed the 2,300 attending were, from left: James A. McConnell, general manager; Frank M. Smith, president; and Dean William I. Myers who welcomed the committeemen on behalf of the State College of Agriculture.

insecure times. Relative stability is many years off."

"In these uncertain times, G.L.F. is a good defense for farmers. We have the dual job of fighting to get goods for farmers when tight controls are on, and fighting attempts to enact regulations that would hurt farmers," the general manager said.

"Government controls are in the immediate future—even to prices and wages," McConnell said, and added that a man didn't have to have any inside information to recognize this. He also pointed out that "to get bureaucracy to make necessary changes in unworkable rules is difficult, but G.L.F. can and will fight the battle of discrimination against agriculture."

C. N. Silcox, assistant general manager, reported that during the year ending June 30, 1950, farmers purchased or marketed through G.L.F. the greatest amount of supplies in its thirty-year history, a total of 2,155,000 tons. Principal items in this tonnage were: grain and feed, 1,250,939 tons; seed, 19,095 tons; mixed fertilizer, 172,616 tons; superphosphate, 105,086 tons; other soil building items, 251,940 tons. Bulk fuel sales were up to nearly 87 million gallons; egg marketing up to 591,000 cases. Among 1949 crops marketed were 1,316,000 bushels of grain and 9,300 tons of beans. Farm supply sales totalled nearly \$12 million.

Net Margin Up

G.L.F.'s wholesale dollar volume during the year was \$141,900,000 with a wholesale net margin of \$4,037,000.

New facilities for services as reported by Mr. Silcox for the past year included: a new fertilizer plant on the Hudson River at Albany where there is direct water delivery from points of production of raw materials; establishment of a marketing service in western New York that is broader in scope to serve more members at least risk; and the start of work on a new fertilizer plant at Union City, Pennsylvania, and a warehouse and grain elevator at Bordentown, New Jersey. He said the location of the feed mill at Bordentown will save \$4 to \$5 a ton on some ingredients.

In addition to these new facilities,

Silcox listed more grinders for grain, more mixers for molasses and other new and improved equipment added at local service units. "The tonnage is a measure of use of G.L.F.," Silcox said, "but things that show leadership and give better facilities to meet the needs of farmers are more important." He gave as an example the direct shipment to members of barbed wire which they took directly off the cars as a savings under general market price of \$270,000.

Opposes Controls

Charles B. Shuman, president of the Illinois Agricultural Association, was principal speaker at the afternoon session and outlined three steps for America to take to win against Russia:

- "1. Abundant, efficient production.
- "2. Make stronger our free choice, free enterprise system.
- "3. Strengthen the moral fibre of our people."

He said that price controls promote inflation by artificial prices, and that inflation makes money so cheap that people won't produce to get it. The free price system, he declared, could only be preserved by checking inflation in every way possible, including reduction of non-defense government spending and paying taxes "as we go."

Referring to the third step, Shuman said, we have poor leadership—leaders who seem to think it is "old stuff" to talk about "work is a virtue, love thy neighbor and so forth, but America still tries to practice that old stuff. We must inject Christian love in our national and local life."

Shuman said he was making no personal attack on Secretary of Agriculture Charles Brannan, but that the Brannan plan is a copy of the socialistic plan in operation in Sweden and that it is a part of a deliberate plan on the part of a group in Washington to take us to socialism. "We are enroute to socialism. Today is the time to draw the line," he declared.

Sharing the platform with Shuman was Herbert McFetridge, a young farmer from Hall, New York, a G.L.F. patron, who delivered the essay which won him first prize in the National

BABCOCK'S HEALTHY CHICKS

MAKE GREAT LAYERS

At the 1950 Starr's Conn. Egg Laying Test, our White Leghorns won first, all breeds, with 3899 eggs and 4124.5 points. For the fourth time we won the high leghorn pen at the Georgia Test. Other 1950 records were good but not outstanding. In every test entered our Leghorns placed fifth or better. We still hold the all-time World's record for all breeds, all tests won in 1944-45.

WE HATCH THE YEAR 'ROUND
White Leghorns, Red-Rock Cross, Rhode Island Reds and Barred Rocks... own two hatcheries with 600,000 egg capacity, three poultry farms and 15,000 breeders. We carry on a complete pedigree-progeny testing program.

Retailing Dressed Poultry

By WALDO W. CHICK, President of NEPPCO

TO the poultryman who does not wish to handle a large number of birds and depend on volume for his income, I think direct selling offers possibilities. However, it is one of the most difficult of all poultry operations and should not be attempted without first giving consideration to all of the pleasures and headaches connected with it.

Probably the first matter of importance is the poultryman himself. The farmer in most cases is a very poor salesman. Most of us can raise good poultry and eggs, but through poor marketing realize just an ordinary profit. To be successful in retailing you not only must be able to grow a fine product, you must have the ability to convince the consumer of the fact. Complaints will be handed out in large doses, some perhaps justified, but many for no reason whatever. The answer in either case must be one that leaves a satisfied customer.

The local market and its demands must now be studied. If you live within twenty miles of ten thousand people, you have the market. The demands of this market will take some time to determine. You will have to feel your way slowly for a year or two to find out how many fowl, roasters, fryers and broilers you need for the various seasons. Then chicks must be started at correct intervals to satisfy this demand. I think it is sound reasoning to find this demand first, and then raise to fill it, rather than raise what you want and try and sell it. Solicit as many customers as you are able to supply for the year and plan on raising about a ten per cent surplus for emergencies.

The next problem is the breed of chickens you must raise to satisfy your market. I have tried nearly all of the popular breeds and various crosses and have finally settled on the white rock for customer satisfaction and ease of dressing. If your market demands many squab broilers, the white leghorn has a place. The first cost is cheap; feed conversion is good up to 2 1/4 pounds, and they dress very easily.

Now we come to the dressing operation. All birds that I want to dress are picked up the night before; they are not fed or watered after crating. Shrinkage, of course, is increased by

MARION ALBRIGHT
1885 - 1950

Marion Albright, who died at his farm home at Athens, New York, on Nov. 7, has been very active in farm organizations. He joined the Dairymen's League in 1921; became county president in 1934; later was a League director, resigning at the last annual meeting because of ill health.

In 1947 he was elected a director of G.L.F. from District 5 which was a newly created district. For years he has been a Granger and Farm Bureau member. He is survived by his wife, one daughter and three sons who have been associated with him on his 400-acre farm.

this method, but the product appears to hold up better if held for any length of time under electric refrigeration.

The poultryman should have a good room to work in, some method of holding water at an even temperature for scalding, a picking machine and cooling facilities. I use ice both for cooling and holding. The birds are cooled in water with cracked ice, and then placed in cracked ice where the water is allowed to drain. By keeping the water at the correct temperature and using the picking machine correctly, you have a product that looks good and sells well. Time and patience appear to be the answer to a successful killing operation.

There are, of course, many more things that enter into direct selling, like packaging, the wise use of credit, and special dates for delivery each week.

By using this method of marketing the poultryman should realize from 35 cents to \$1.00 per bird extra for his time and trouble, depending upon whether sold to stores or consumer. There has always been a premium market for poultry that is a little above ordinary, and I think there always will be. Are we taking advantage of this market that is ours only for the asking?

EDITOR'S NOTE: Does your experience in retail selling agree with that of Waldo Chick? Let's hear from you.

EASY CLEANING POULTRY ROOST

Instead of installing ordinary hard-to-clean roosts in his new henhouse, Daniel Carmine, Hillsboro County, Nashua, New Hampshire, designed his own to make his work easier. He constructed his roosts one foot high and measuring 4x5 feet. Turkey wire and crosspieces completed the job except for the addition of several hook and eyes for attaching to the wall.

Roosts like these will prevent manure from coming in contact with rear wall of henhouse and are easy to clean, as the poultryman simply detaches roost from hooks and shovels out droppings.

Windows were installed near roosts to allow manure to be thrown into manure spreader below.

Several roosts were installed in each pen.—C.L.S.

"Black Leaf" Warfarin KILLS RATS

Economical—Mix one part Black Leaf Warfarin with nineteen parts corn meal or other acceptable bait material. Concentrated, tasteless, odorless, never develops "bait shyness". Destroys entire colonies of rats and mice. Full directions on the package. Sold at drug, hardware and farm supply stores.

Use Black Leaf 40

TO KILL Chicken Lice AND Mites

Apply Black Leaf 40 to roosts with handy Cap Brush. Fumes rise, killing lice and feather mites, while chickens perch. One ounce treats 60 feet of roosts—90 chickens. Directions on package. Look for the Black Leaf brand when you buy pest control products.

By J. F. "Doc" ROBERTS

I AM getting very suspicious of the farm news we are now hearing and reading, namely, that farm income will increase greatly next year, perhaps 15 per cent or more; that there will be a shortage of meat with sharply higher prices; that all food costs will be higher. This is vital news to farmers but it is such a reversal in technique from the usual propaganda that I cannot help but question the reasons for it.

Right now our cash crop farmers in western New York (and I could say in the whole Northeast) are facing one of the most disastrous seasons on record. Mr. E. P. Rumsey of Batavia, a real farmer and livestock man, told me recently that for the first time in 50 years he had grown valueless crops. His cabbage was unsalable at any price; his tomatoes wilted on the vines because canners would not take them; his potatoes were selling at 75 cents per cwt. graded, but the outgrade was unsalable. Beans have largely wilted on the vines, and carrots, beets and onions are not bringing enough to dig. This is the cash crop picture, yet we are hearing that the income of the Northeast farmer is but 3 per cent off this year.

Apparently there is a movement on foot to place price curbs on foods soon after election. At least the farmer is being pictured very unfavorably before the public. Just where the power for controls stems from, and how the movement gets its concerted action can only be guessed at. Perhaps more and more politicians are expecting bigger and better jobs. This food price squeeze will ruin farming as we have known it unless every farmer and every farm organization gets the true facts before the people.

Unfair Propaganda

Furthermore, this talk of a meat shortage is entirely contrary to our livestock situation. There is an increase in numbers and in pounds of every livestock species with the exception of sheep and lambs, which only account for about four pounds per person anyway. There has been a big increase in breeding stock on farms and ranches, and more meat is sure to be available next year.

The devastating angle which all this propaganda takes is that people will have more money with which to buy meat; therefore, unless the farmer is controlled, meat will bring more money. The idea seems to be that from labor on up, everyone must have more money with which to raise prices and taxes but they must not use any of this increased income for food. They are desperately trying to put over to the public a ruinous, political, mental quirk by using the food producer as the goat.

Perhaps one way to overcome this

would be for the Northeast actually to produce a lot more meat. If we were sure these inflated conditions would continue indefinitely, that would be simple, but fortunately livestock farming, as every other type of farming, must remain sound. The only way open, then, is greater and better use of what we already have. Successful livestock farming in the Northeast hinges on our grasses and cheaper, rough feeds. Home-grown grains do help, but in a pinch the mid-West can beat us at that, while they never can on rough feed and pasture.

More Feed Per Acre

I am working on an experiment on my farm to increase the tonnage of good succulent feed without increasing my pasture acreage, and at the same time grow more grain. The last of July I planted about 22 acres in wheat after taking off a hay crop. It was almost knee high before October 1st and my pasture was down too close. I turned the 75 heifers on this wheat and other hay fields by using an electric fence, and now the heifers, the wheat, and the seedings of alfalfa and brome grass look wonderful. I have some rye well on its way following early potatoes, and I plan to turn on both the wheat and the rye for two or three weeks early next spring, and I still expect to get a good crop of grain from both the wheat and the rye. If this works out, I can increase my livestock by at least 30 per cent over my normal pasture capacity.

Whether this proves right or wrong, Kansas in the last ten years has almost revolutionized the late spring livestock markets by running millions of head on wheat and keeping them on the wheat until oat planting time or later. This is comparatively new, yet they are getting increased yields where cattle or sheep have run all winter on the wheat. Out there, in most cases, water has to be carted to the animals, and big snow plows are kept in readiness to plow out lanes during their big storms.

We do not have this sort of expense and, in most cases, we do have shelter enough for increased livestock if we can have good succulent feed from three to six weeks longer than we now have. Also, if this works, the grain harvested should more than pay the costs.

There have yet to be some changes made in our Northeast cash crop and livestock farming. Our grasses, our rough feeds in abundance, more grains and more livestock seem to me to be our answer.

— A. A. —

RESULTS FROM ARTIFICIAL BREEDING

Maurice Johnson of the New York Artificial Breeders Co-operative has reached the following conclusions from a study of cows sired artificially by bulls owned by the Association:

1. Not all proofs on bulls proved in individual herds truly evaluate a bull.
2. Young bulls wisely selected by means of a complete analysis on all animals in the herd are, on the average, reliable herd improvers.
3. The selection of any young bull is a decided risk unless guided by a complete analysis of a herd. Selection based on high individual records is particularly dangerous.

4. When selecting bulls stick to the hard, cold facts. Don't let alibis influence you.

5. Don't be taken in by overly glamorous figures. Extremely high increases or high indexes should be looked upon with suspicion, for rare indeed is the bull with an equal-parent index of more than 500 pounds when subjected to a crucial test, under average farm conditions. The conditions under which a proof is made can make a tremendous difference in the figures.

Talking Turkey

Cooked half or whole, the King of Birds will star on Thanksgiving Day.

—Photos by Poultry and Egg National Board

NOW THAT I have a home freezer, I'm able to make one large turkey do double duty on Thanksgiving and Christmas. I ask the butcher to split my turkey down the backbone and breast—just cut it in half. I cook one half for our Thanksgiving dinner, and wrap the other half in freezing paper and put it in the freezer until Christmas.

We find these half turkeys, 9 to 10 pounds in weight, just about the right size for our family and two or three guests. For each person to be served, I allow $\frac{3}{4}$ to 1 pound of turkey, weighed dressed, but not drawn. I could buy one of the newly developed small, broad-breasted turkeys, but I think the larger ones, weighing 18 to 20 pounds dressed, are a better buy, for that size is usually a few cents lower in price. Also, there's less bone in proportion to meat than in a smaller turkey.

I'm pretty particular about the bird I pick out. I look for soft, smooth skin with no blemishes, short legs, flexible breastbone, plump breast, and back and thighs well covered with fat. The butcher draws it, removing head, feet, entrails, and (on request) the tendons from the legs.

To Roast A Half Turkey

This is how I prepare my half turkey:

First, remove any pinfeathers or hairs. Singe if necessary, but be careful not to scorch or darken the skin. Remove any bits of lung, kidney, etc., remaining in cavity. Wash thoroughly and wipe bird dry.

Sprinkle inside of bird with salt. Skewer skin to meat along cut edges to prevent shrinking from meat during roasting. Tie leg to tail. Lay wing flat over white meat and tie cord around breast end to hold wing down.

There are two methods of roasting a half turkey. Mine is to fill the body cavity $\frac{3}{4}$ full of stuffing; place bird, **stuffing side down**, on rack in shallow, open pan. (If rack is not closely woven, put a piece of cheesecloth or tin-foil over it so stuffing won't fall through.) Roast uncovered in a very slow oven, 250° F., and baste every half hour, allowing 25 minutes to the pound for half turkey weighing about

9 to 10 pounds. If bird seems to be getting too brown, cover with two thicknesses of cheesecloth or a thin towel moistened with the fat in the roaster or with butter or salad oil.

The Poultry & Egg National Board, however, prefers to roast a half turkey, **skin side down**, and bake the dressing in a separate pan during the last 1 to 1½ hours of turkey roasting time. The half turkey is greased with cooking fat, covered with a piece of fat-moistened cheesecloth, and roasted at 325° F., **without basting**, allowing 4 to 4½ hours for an 8 to 12 pound half turkey (ready-to-cook weight).

A Whole Turkey

When a whole turkey is roasted, sprinkle the inside with salt. Fill opening at the neck $\frac{3}{4}$ full with stuffing. Lap the skin of the neck over onto the back and fasten it with a skewer or toothpick. Next, fill the body cavity $\frac{3}{4}$ full. Stuffing should never be packed in, for it swells during cooking; and if there is too much, it will either burst through the lacing or get soggy and compact.

Fasten the opening with skewers or toothpicks placed at regular intervals, then bring the edges together by lacing with a cord. Place the bird breast side down and tie the center of a cord to the tail. Pull legs close to tail and tie legs and tail firmly together. Insert skewers to hold the wings and legs close to the body. Lace the cord across the back, through the wing and leg skewers, and tie. Grease skin thoroughly with melted or softened cooking fat.

If desired, salt the outside, but it is not necessary. Place bird breast side down on rack in open pan. Cover top and sides of bird with fat-moistened cloth—preferably clean white cheesecloth. Do not sear, cover, or add water.

Place in preheated oven, set at 300° F. If cloth dries slightly during cooking, moisten with fat from bottom of pan. Personally, I like to baste my turkey every half hour and cover with a cloth only if it is getting too brown. But using a fat-moistened cloth from the beginning does eliminate the job of basting.

Time roasting of whole turkey according to weight. If your dinner is set

for a definite hour, start the bird ahead of schedule to avoid delay should it take longer to cook the turkey than estimated. This also gives you plenty of time to make the gravy and arrange the turkey attractively on the platter.

Whole Turkey Timetable

Ready-to-cook Weight (lbs.)	Oven Temperature	Total cooking Time (hours)
8 to 12	300° F.	4 to 4½
12 to 16	300° F.	4½ to 5
16 to 20	300° F.	5 to 5½
20 to 24	300° F.	5½ to 6

To tell whether turkey is done, move the drumstick up and down. The bird is done if leg joint moves readily or breaks. Or press the fleshy part of the drumstick (but protect your fingers with cloth or paper). If meat feels soft, it is done. When done, remove bird to a large platter. Use the drippings for the gravy.

Giblet Gravy

Simmer gizzard, heart, and neck in 4 cups of water for 2 to 3½ hours, or until heart can be pierced easily with a fork. Add liver 10 or 20 minutes (depending on size) before giblets are done. Drain, reserving the stock. Chop the giblets. Use 6 tablespoons of drippings from the roaster, add 6 tablespoons flour, and stir until blended. Add giblet stock gradually, stirring constantly, and cook until thick and smooth. Add milk to thin to the desired consistency.

Stuffing

- $\frac{1}{3}$ cup fat
- $\frac{1}{2}$ cup minced onion
- 3 quarts dry bread ($\frac{1}{2}$ inch cubes or crumbled)
- 1 teaspoon sage or poultry seasoning
- 1 teaspoon salt
- $\frac{1}{4}$ teaspoon pepper

Melt the fat in a large frying pan. Add the onion and cook until light brown. Add the bread crumbs and seasoning, and stir until well blended.

If the stuffing is prepared the day

before, it must be refrigerated. Turkey should be stuffed just before roasting.

The Day After

Should you get tired of cold turkey, turkey sandwiches and the like, arrange some of the turkey in a greased casserole, spread stuffing (left over, or make some more) over the meat, add 2 cups gravy, spreading it over the stuffing. Bake in a moderate oven, 350° F. for 25 minutes, or until the dressing is brown. This may be served from the dish, or turned out on a platter.

May you have much to be thankful for!

A BOY'S GRACE

By MARY GEISLER PHILLIPS

Father, we thank Thee for this meat
(What do the Chinese children eat?)
I'm starved because I played so long;
Hamburg will make me big and strong!
Father, we thank Thee for these beans,
Potatoes, — and — oh, yes, the greens!
I'd like to send my carrots maybe
To some poor starving foreign baby.
There's no dessert? Well, with Thy grace
Protect small children everywhere,
And give them homes where mothers take
Time to make a birthday cake.
We thank Thee most for all the faces
Here at this meal—no empty places!
Dad at the head, and Grandma here,
With Mom, the twins, and baby near.
Of all the things we're thankful for,
The best is home and one thing more—
Our country that is free and good:
Please help us share this daily food.

Mrs. Olga Stratton WINS N. Y. Grange Bread Contest

FIRST, Mrs. Olga Stratton

SECOND, Mrs. Howard Hudson

THIRD, Mrs. Raymond Johnson

FOURTH, Mrs. William Tuma

"I'll come if I'm able to, but I'm so excited I don't know whether I can get there!"

THAT'S WHAT Mrs. Olga Stratton of Mayville, N. Y., Chautauqua County, said when we phoned her that she had won first place in the state-wide bread baking contest and that we wanted her to come at once to State Grange session in Elmira, N. Y., to be publicly honored for her achievement.

Mrs. Stratton's bread topped all others in a contest in which 4,000 grangers, 700 subordinate granges, and 53 pomona granges took part. Sponsored jointly by New York State Grange and *American Agriculturist*, the contest is a project of the State Grange Service and Hospitality Committee. To put it over, chairmen of every subordinate and pomona grange S. & H. committee teamed up with the state committee, chairmanned by Mrs. John Lavery of Geneseo, N. Y. Also helping with the running of the contest was *American Agriculturist's* Home Editor, Mrs. Mabel Hebel.

Fifty-three county champions entered the contest finals, and their entries were so uniformly excellent that it took three judges a whole day to score them. The Home Economics experts who had the hard task of picking winners were: Mrs. Grace Noxon of the Elmira office of the New York State Electric and Gas Corp., and Mrs. Byron H. Ross and Mrs. William Wigsten of Horseheads, N. Y. Winners' names were not known until the judging was finished and sealed envelopes were opened.

Close behind Mrs. Stratton came many other high scorers, some of them only a fraction of an inch apart! Each of the first six received one of the grand prizes. Contestants had been asked to list their preferences for the grand prizes in advance, and when winners' names were known, the prizes were distributed in the order of their rank and choice, as follows:

De Laval Speedway Food Freezer (Model F-120, 17 cu. ft.) from De Laval Separator Co., New York, N. Y., went to Mrs. Stratton, the No. 1 winner.

Knox New Mealmaster Combination Oil-Electric or Coal-Electric Range from Knox Stove Works, Inc., Knoxville, Tenn., was taken by winner No. 2.

Speed Queen Washer (Heavy Duty) from Speed Queen Corporation, Ripon, Wisconsin, and a year's supply of "Cheer" went to winner No. 3.

Kalamazoo Gas Range (Model DL-144), from Kalamazoo Stove and Furnace Co., Kalamazoo, Michigan, was awarded to winner No. 4.

International Harvester "femineered" Refrigerator (Model U-95) from International Harvester Co., Chicago, Illinois, went to winner No. 5.

Speed Queen Ironer (Deluxe Console) from Speed Queen Corporation, Ripon, Wisconsin, was chosen by winner No. 6.

In addition to the grand prizes, valuable merchandise and cash prizes were awarded as follows:

\$159 in entry prizes from New York State Grange (Each county winner taking part in the contest finals received a \$3 entry prize.)

\$100.00 was awarded to the 27 highest winners by *American Agriculturist*, as follows:

1st prize, \$25.00; 2nd, 20.00; 3rd, 15.00; 4th, 10.00; 5th, 5.00; 6th, 3.00; 7th, 2.00; 8th to 27th, \$1 each, 20.00.

Each of the 10 highest winners received the following prizes:

A Domino Picnic Basket containing 11 different packages of Domino Pure Cane Sugar from **American Sugar Refining Co.**, New York, N. Y.

\$2.00 in cash from **General Foods Sales Co.**, Certo Division, New York, N. Y.

5-lb. sack of G.L.F. Pancake Mix, 2-lb. sack of G.L.F. Cake Flour, 5-lb. sack of G.L.F. Quality Patent Flour, 5-lb. sack of G.L.F. Quality Pastry Flour and 25-lb. sack of G.L.F. Vitafed Flour from **Cooperative G.L.F. Exchange, Inc.**, Mills Division, Buffalo, New York.

One 24-ounce can Davis Baking Powder, 1 pound can Cocomalt, 1 Davis Cook Book, and 1 set Davis Quick Mix Baking Charts from **R. B. Davis Company**, Hoboken, New Jersey.

One 50-lb. sack of Occident Family Flour from **Russell-Miller Milling Co.**, Minneapolis, Minn.

The 11th high winner received a year's supply of "Cheer."

Although the No. 1 winner did not get to State Grange in time for the announcement of winners, many of the other high scorers were on hand for congratulations and acclaim. Our congratulations go to every one of them, and also to all of the contestants who took part. We never saw better looking bread than those 53 loaves at State Grange. All of them looked perfect to us, and very tempting. We wish that every one could have had a prize.

STATE CONTEST WINNERS

1. Mrs. Olga Stratton, Mayville, Chautauqua Co.
2. Mrs. Howard Hudson, Curriers, Wyoming Co.
3. Mrs. Raymond Johnson, Webster, Monroe Co.
4. Mrs. William Tuma, Horseheads, Chemung Co.
5. Mrs. Carlton Seavy, Marcy, Oneida Co.
6. Mrs. Emmett Mosher, St. Johnsville, Fulton Co.
7. Mrs. Herbert Van Vliet, Lima, Ontario Co.
8. Mrs. Neita Smith, Cortland, Tompkins Co.
9. Mrs. Clara Mitchell, Moravia, Cayuga Co.
10. Mrs. Mary Tompkins, Carmel, Putnam-Westchester Co.
11. Mrs. Warren Schaal, East Pembroke, Genesee Co.
12. Mrs. Lela Arhens, West Valley, Cattaraugus Co.
13. Mrs. Burtis Meyers, Canajoharie, Montgomery Co.
14. Mrs. Fulton Caswell, Crary Mills, St. Lawrence Co.
15. Mrs. Emma Maider, Clay, Onondaga Co.
16. Mrs. Norris Burnham, Cortland, Cortland Co.
17. Mrs. Mary Ingraham, Glen Aubrey, Broome Co.
18. Mrs. Floyd Cox, Manlius, Madison Co.
19. Mrs. Ellen Huff, Lodi, Seneca Co.
20. Mrs. Margaret Fletcher, Bainbridge, Chenango Co.
21. Mrs. Betty Goodfellow, Fulton, Oswego Co.
22. Mrs. Clayton Taylor, Lawtons, Erie Co.
23. Mrs. Mildred Thompson, Canaseraga, Allegany Co.
24. Mrs. Hilda McCarthy, Stephentown, Rensselaer Co.
25. Mrs. Marie Taylor, Jay, Essex Co.
26. Mrs. Elizabeth Adamek, Endicott, Tioga Co.
27. Mrs. John Lloyd, Downsville, Delaware Co.

THE FALL-WINTER ISSUE
Presents 125 Pattern Designs in
exciting new fashions for

ALL SIZES—ALL AGES—ALL OCCASIONS

An invaluable guide to selecting your new season's wardrobe. This book brings you inspiring styles translated into practical, easy-to-sew pattern designs for all the family. College and career clothes, school togs, party frocks, and many charmingly dignified fashions for the more mature. Plus many pages of welcome ideas for making Christmas gifts and items for the church bazaar.

It's the most comprehensive collection you'll find in any pattern book. Order your copy early. Price just 20 cents. Address American Agriculturist Pattern Ser., Box 42, Station O, New York 11, N. Y.

Pattern illustrated above is No. 2244 and can be ordered in sizes 10 to 20 at our regular pattern price.

California Tour Is Tops!

By MABEL HEBEL

AS ANYONE who has ever gone on an *American Agriculturist* tour will tell you, it is the best tour of all—unequalled in service, accommodations, happy companionship, and fascinating sightseeing. Last year, I went along, and although I expected to have a wonderful time, I was really unprepared for the marvelous experience I had.

There were 200 of us, and we had a special train, with A.A.'s popular tour conductor, Verne BeDell, in charge of everything. Everyone was so friendly that we were like one big family, and that was the way it was for three whole weeks.

I don't think any of us will ever forget the wonderful meals and service we had, especially on the Northern Pacific train that took us to the West Coast. We never had to worry about a thing. There was no baggage to carry, no tips to pay, no tickets to lose. We just followed our leader and went from one fascinating place to another.

American Agriculturist is offering another of these marvelous tours, next February 17 to March 13. The itinerary reads like a tale of enchantment—the mighty Rockies, the beautiful Pacific Northwest, sunny California, quaint Tijuana in old Mexico, the stupendous Carlsbad Caverns, and glamorous New Orleans.

The "all-expense" ticket covers absolutely everything with the exception of one lunch, and you'll be amazed at how reasonable the price is. If you are thinking of taking this trip, I want to urge you to send today for a copy of the illustrated itinerary. Just drop a card to Mr. E. R. Eastman, Editor, *American Agriculturist*, Box 367-T, Ithaca, N. Y. The itinerary will bring you complete details, including the cost from your locality. Don't delay. These tours are always sold out early.

Multnomah Falls, one of the many beautiful sights our party will see when motor-ing over the Columbia River Highway in the Pacific Northwest.

NEW! IMPROVED! 3 WAYS BETTER

... say
prize-
winning
cooks!

"Easier to Use," says Mrs. Danial Hart, Cleveland, Ohio, Cuyahoga County Fair winner. "There's no time wasted, no bothersome 'special' directions to follow. This is the easiest, fastest yeast ever."

"Faster Dissolving," says Mrs. Alfred A. Niskala, Union, Maine, first prize winner at Knox County Fair. "It's the speediest yeast ever. Just add it to warm water and stir it well—and presto! It's ready to use in a few seconds!"

"Faster Rising," says Mrs. G. W. Hinderer, Reno, Pennsylvania, a top winner at County and State Fairs. "Fleischmann's New Improved Dry Yeast beats all for speed. I get quicker risings, finer results when I bake at home."

Save Money On This Home Mixed Cough Syrup

Big Saving. No Cooking. So Easy.

You'll be surprised how quickly and easily you can relieve coughs due to colds, when you try this splendid recipe. It gives you about four times as much cough medicine for your money, and you'll find it truly wonderful for real relief.

Make a syrup with 2 cups of granulated sugar and one cup of water. No cooking needed. (Or you can use corn syrup or liquid honey, instead of sugar syrup.) Then put 2½ ounces of Pinex (obtained from any druggist) in a pint bottle, and fill up with your syrup. This makes a full pint of medicine that will please you by its quick action. It never spoils, and tastes fine—children love it.

This simple mixture takes right hold of a cough. It loosens the phlegm, soothes the irritated membranes, quickly eases soreness and difficult breathing.

Pinex is a special compound of proven ingredients, in concentrated form, well-known for its quick action in coughs and bronchial irritations. Money refunded if it doesn't please you in every way.

FOR EXTRA CONVENIENCE GET NEW READY-MIXED, READY-TO-USE PINEX!

WHAT'S GONE BEFORE

"No Drums," a story of what happens to home folks in time of war, started in the September 2 issue. Mark Wilson, living in a typical farm neighborhood in southern New York at the opening of the Civil War, is in mental conflict about answering Abe Lincoln's call for volunteers and leaving his sweetheart, Ann Clinton, a neighboring farm girl.

Henry Bain tries to steal Ann away from Mark, a fight follows, and finally Mark decides to enlist immediately. Ann and he are married in a surprise dramatic ceremony in the little church before a large congregation.

The next morning the new bride and groom ride to the county seat, where they part, Mark to enlist and go to the front; Ann to return home to fight the battles of loneliness and worry on the home front.

CHAPTER VI

When the supper work was done, Nancy said:

"Ann and I are going upstairs now. You girls find something to occupy yourselves with down here."

In the chamber where the boys slept, Nancy waved Ann to a chair and sat down herself on the edge of the bed.

"My dear," she said, "I want to tell you that I understand how hard this parting has been for you today. When you're older and have children of your own, you'll know how hard it has been for me, too. These boys of ours—and no matter how old they are in years they're always boys to us, God bless them—don't and cannot always look at life and its problems the way we women do. In some respects we have understanding and feelings not given to men—most men, anyway—and that very fact lays us wide open to suffering."

Quick to defend Mark from even the slightest criticism, Ann said:

"Yes, Mother,"—Nancy's face lit up at the term—"but I know that Mark felt just as bad as I did today."

"Bless his heart, of course he did. That wasn't just what I meant, Ann. Maybe I'm not clear in my own mind. Let me say it another way. Of course Mark felt bad, and will continue to be lonesome. But he'll have action and adventure, new scenes and new faces that will take his mind off himself and help him a lot. Meanwhile, we women at home will have to carry on in the same old way, in the same surroundings. I can't help resenting a little the fact that men make these wars, and the women have to fight them just as much as the men—not with guns, of course, but with all the men gone to war, who is going to raise the food to feed them? Who's going to keep these farms going? Who's going to keep the families together? Why, the women, of course! And there will be no fifes or drums playing us on, either."

"But that wasn't what I brought you up here to say. I don't know how I got on to this subject. What I really want to do is to tell you that, being a woman, I understand how hard this is for you. I want to tell you again how pleased I am that you are in the family, that we have a new daughter, and I want to comfort you by reminding you that everybody thinks this war will be short and Mark will soon be back with us."

"In the meantime, both Mr. Wilson and I want you to feel that this is your home and that you're very wel-

come to live here or with your own people, just as you think best. We just want you to be as happy as you can under these hard circumstances."

Crossing swiftly to the side of the bed where Nancy sat and putting her arms around her, Ann said:

"Thank you, Mother. I've always thought you were a dear and now I'm sure of it all over again. I haven't had time to think much about it, but probably it is best for me to continue to stay with father and mother. But I certainly shall be over here a lot. There's something pretty nice about having two homes!"

For days Ann haunted the post office, walking the mile back and forth, rain or shine, looking for a letter from Mark. One evening as she came out of the post office, lonesome and discouraged, Henry Bain spoke to her:

"Did you walk down?"

Learning that she had, he said:

"Come on, get into the buggy. I'm going out your way and I'll drop you off at home."

When she was seated in the buggy, Henry asked if she had heard from Mark.

"Not yet," she admitted.

"Well, these young fellows, you know how they are. When they go off on an adventure like this silly war, they get so steamed up with excitement and new scenes and faces that it's easy to forget the home folks."

"You know that Mark isn't like that," said Ann, indignantly. "He'll never forget us. And I know he'll write

just as soon as he can."

"Besides," she continued, emphatically, "this isn't a silly war. Mark had to go and—" she couldn't resist adding—"maybe the war would be over sooner if some others felt the same way."

Henry changed the subject and soon afterwards drove up in front of the Clinton farm, where Ann thanked him rather coldly and bade him goodbye.

The next day her regular pilgrimage to the post office was rewarded. John Crawford beamed at her over the top of his spectacles and handed her a letter. Then he and the usual loungers around the stove stood by expectantly, evidently hoping that she would stop to read the letter there and maybe tell them something of the war news. But Ann couldn't do that. That letter was a most precious and personal possession. She tucked it carefully into her pocket and almost ran out of the store. As soon as she got home, not even stopping to answer the inquiring looks of her parents, she ran for the privacy of her own room, that room almost holy now because it was where Mark and she had spent their first night together.

Striving to compose herself, she sat down in the window, facing the glory of the western sunset sky. Deliberately and slowly she opened the letter and began to read:

"My darling wife and sweetheart:

"This is the first opportunity I have had to write you. The outfit I am with is so far mostly noted for what it has not. Until now I haven't been able to get a scrap of paper, a pen, or even a pencil. On top of that, they have kept us so busy from daylight to dark that when they blow 'Taps' we just fall down and go to sleep, so doggone tired that it seems we never could get rested."

"Even now I haven't time to tell you much about what is happening to us here. As you probably know, they shipped out a big bunch of us the very night after you left. I was glad of it, for I didn't want to spend another night in Owego after you had gone."

"We arrived in Philadelphia the next day. If we ran our farms the way they run this Army, we would soon starve."

SLIM & SPUD

Spud's Not One to Stay Home

I never in my life saw so much confusion and disorder. We never got anything to eat that first day in Philadelphia until evening—and then not much. In fact, the town is full of soldiers, and apparently there's not enough grub to go around. Anyway, I've been hungry ever since I saw you."

That brought a lump to Ann's throat.

"That first night we slept in a big park on the ground, with nothing but a couple of blankets. When one of my comrades said something to the sergeant about it, he growled that it was good for us, that we might just as well get used to that kind of a bed, for it's all we'd ever have."

"But there's one good thing, we've got our new uniforms and caps, and they're warm and quite nice-looking. Wish you could see us in them. Also, they are really trying to make soldiers out of us. That's why we're so tired. It's drill, drill, drill—'stand up straight, darn ye'—'suck in your guts, you're in the Army now'—all day long. But it's good for us, I guess, for we are learning not to slouch, we are pushing our chests out and our chins up, and in spite of everything you'll be glad to know that I'm feeling well."

"Say, darling, you remember that old song, 'The Girl I Left behind Me'? The town is full of marching soldiers, and it seems as though they have just about as many drummers and fifers as they have soldiers, and I guess that piece and the one about John Brown's body are the only ones they know how to play. If I've heard them once I've heard them three dozen times. You know how the first one goes:

"'I'm lonesome since I crossed the hills,' etc. No matter how many times I hear it, it brings a lump into my throat."

"I know, I know, my darling!" Ann spoke aloud. "I heard it, too."

"But enough of war and soldiering. Let me tell you, Ann, dear, if I can find the words, how much I love you. I miss you so. When you drove old Molly out of that livery stable, it seemed to me that the end of the world had come, or might just as well. On the crowded train to Elmira and Philadelphia, all night long it seemed to me that the car wheels sang 'Good-by, Sweetheart! Goodby, Sweetheart!' I'd close my eyes and try to rest, and all I could see was your sweet, brave face when you lifted your chin and said goodbye to me without a tear."

"Then I thought of that picture of Abe Lincoln that you and I stood before in the hotel, and I felt a little better because it made me feel that I was doing the right thing."

"One of the hardest things to bear is the lack of news from you and from the other folks at home. Of course, you couldn't write because you didn't know where to send the letter. But now you can. My temporary address is at the head of this letter. Of course we don't know when we'll move, but I'll hope your letters will be forwarded. Write often, sweetheart, and tell me all about yourself, what you are doing, what you are thinking, and above all, tell me that you love me, for that I need to be told—and often."

Your brand new and lonesome husband,

Mark."

Totally oblivious of her surroundings, Ann read the letter to the end, and then read it again and again. At last, jumping to her feet, she ran downstairs to where her father and mother were sitting, one on each side of the little "settin'-room" table, drawn close to the sheet-iron stove in which a fire had been lit against the chill of the spring evening.

"Mother! Dad!" she cried, "I've heard from Mark! I've heard from Mark!"

Both parents smiled and her mother said:

No Drums

(Continued from Opposite Page)

"That wasn't hard to guess, dear, by the way you rushed in here and ran upstairs. And by the look on your face the news is good."

"Yes, he's all right, but tired and hungry, poor boy."

"What'd he tell you about the war?" inquired her father.

"I'll read you the letter," said Ann, still excited, then smiling shyly, "at least a part of it."

After she had read it and they had talked it over, Ann got her cloak and bonnet and announced:

"I'm going to run over to the Wilsons. They'll want to know too."

"What? Tonight?" her mother exclaimed.

"Maybe they have a letter, too," said her father.

"I don't think so," cried the girl. "Mark hasn't been able to write before and—" a little proudly, "I think he would write me first."

The father and mother laughed indulgently as the door slammed behind the hurrying girl. A few minutes later she burst into the Wilson kitchen with so much noise and excitement that the family jumped to their feet.

"What's the matter, Ann?"

"I'm sorry," laughed Ann, "Nothing but good news. I've heard from Mark. I've heard from Mark." She waved the letter at them.

Even the small children listened eagerly and intently while Ann read part of the letter with a lilt in her voice. Then impetuously she threw her arms around Nancy's neck and cried:

"I must get back home" and was out of the door on a run.

Back home she found that her father and mother had gone to bed but had left a coal oil lamp lighted for her, so she took it and climbed slowly up the stairs to her bedroom. As she began to undress, her elation began to ebb. After all, it wasn't Mark, it was just a letter. As she got into bed she thought that all of them could say what they had a mind to about the soldiers having it easier in war than the women. It just wasn't so. After all, she had a warm, soft bed, and enough to eat—such as it was—while her Mark was sleeping on the ground and was hungry.

Unable to sleep she got up, lit the lamp again and, wrapping the quilt from the bed around her, sat down to answer Mark's letter.

"Dearest Mark:

"I cannot tell you what it meant to me to get your letter, the first one since we were married and the first love letter, I'd have you know, I have ever received! When your letter came I read it and then I read it again and again, and then I told Father and Mother about it. After that I ran all the way to your place to let your folks know how you were. When I came back I guess I was tired or excited or something. Anyway, it's so lonesome in my room without you that I can't sleep, and here I am trying to talk to you in the only way I have.

"Dear, we've known each other ever since we were youngsters, and for a long time we thought we were in love. I don't know how it is with you, but I didn't realize how much I cared for you until after we were married and until I had to come home alone and leave you. I wish I knew how to find the words to let you know how you are in my thoughts all of the time, and how hard I try to imagine what you are doing each hour of the day and how much I worry for fear you are getting sick or hurt. I wish I knew how to tell you how I miss you and how long the weeks stretch ahead before I can see you.

"Now as I read this over it doesn't seem to be very brave or comforting except that maybe you will get some idea of how I love you. And maybe it will be a comfort to you to be assured that you are in my thoughts constantly, and that there is somebody here at home, in addition to your own dear folks, waiting for you with open arms. Maybe it is a comfort to you also, as it is to me, to remember that we are young, that we have years ahead for which we can plan and hope for happiness together. After all, a few weeks or a few months are not really long out of a lifetime.

"The spring is really opening up now. The farmers who are left are busy with the spring work and are planting larger crops than usual, knowing that more food will be needed because of the war. All your folks and mine are well. Write as often as you can, and take good care of my husband.

"Your loving wife,
Ann."

Ann reread the letter, folded it in an envelope, addressed it, blew out the light and, comforted, crawled back into bed. The next thing she knew the early morning sun was streaming in her window.

(To be continued)

2,300 Attend 30th Annual G.L.F. Meeting

(Continued from Page 8)

FFA speaking contest at Kansas City, Missouri. Discussing farm price supports, he said: "Price controls must be accompanied by controls of production and consumption and finally, as a result, we have complete economic domination by the State.

"We can decide to risk our economic future on free enterprise and fair competition . . . or we can permit permanent government regulation of production, prices and consumption—a plan that history proves has always failed. Which road shall we take?"

In a tribute to the late H. E. Babcock, Earl Laidlaw of the Gouverneur Farmers' Cooperative Association, said in part: "The world as a whole and particularly the agricultural industry is much better off for H. E. Babcock having lived in it. In his passing we have lost not only a real friend but a very much worthwhile man . . . All that were privileged to work with him want to express our gratitude for the many ways in which he so willingly gave of his time and ability for the

service to his fellow man."

Five directors, nominated at meetings within their G.L.F. districts, and two nominated by the State Grange and the State Farm Bureau, were elected. They were:

Orrin F. Ross, a master farmer from Lowville, New York, and secretary of the Lowville Farmers' Cooperative for the past thirty years. He succeeds J. Leon Atwood, Plattsburg, New York, who was not a candidate for re-election.

The other six were all re-elected:

J. D. Ameal, Williamson, New York, a member of and nominated by the New York State Farm Bureau Federation.

Earl B. Clark, North Norwich, New York, a member of and nominated by the New York State Grange.

J. Sloat Welles, Elmira, New York. Ralph L. Culver, Laceyville, Pennsylvania.

Wallace H. Rich, Hobart, New York. Henry W. Bibus, Jr., Wrightstown, New Jersey.

KERNELS, SCREENINGS and CHAFF

SUNNYGABLES NOTES

By John Babcock

JACK CONNER, who is easy going, heavy set and sensible, tends to like livestock of the same temperament. He favors the placid Brown Swiss cow over other breeds, keeps a steady-eyed riding horse around that can be walked up to in the pasture, and raises Red-Rock chickens that have to be nudged out of the way in the laying pen. Jack's dog even fits the scheme. She's mostly Border Collie, a breed noted for its quiet manners and liking for children.

Sunnygables Poultry

When Jack took over the lion's share of the operations at Sunnygables Farm a few years ago, he decided to make use of the laying houses which had been idle through the war years. He felt that poultry would give him the current income that his small dairy herd was not yet able to provide.

One of the main reasons for our having abandoned poultry here at the farm was lack of a good man to care for the flock. Caring for chickens is not merely the will to work hard and follow a set of feeding instructions. You have to have an "eye" and "feel" for poultry husbandry, and a genuine liking for chickens. Where I would starve to death in the chicken business, Jack has the patience, knack for management, and conscientious observation that I lack. This season he is concentrating his abilities on a flock of Red-Rocks that he bought as 21-week-old pullets in the middle of August.

Jack borrowed the money to go back into poultry this year after a rather discouraging experience with last season's poultry operation. Last year, he produced hatching eggs from a flock of New Hampshire Reds, using Plymouth Rock males.

Why the Change?

The breeding flock Jack worked with in 1949 was raised from chicks under electric brooders. The mortality record was not enviable, chiefly because the birds had to take a back seat to our number one operation at Sunnygables, which is the dairy. To raise a large number of chicks successfully is a full-time job with a lot of risks. Unless you live right with them (which Jack did for the first two or three weeks), a faulty thermostat, unbalanced ventilation or a fuse failure is bound to spring up. For that reason, we decided to buy grown pullets this year.

In addition, we found that replacements for a breeding flock are costly, and that meat buyers discriminate heavily against the culls. Also, our particular Reds did not hold the production we felt they should. These factors turned Jack back to producing market eggs—but still with heavy breed birds, which he prefers to handle.

Present Production

Right now, Jack's flock of 1,000 Red-Rock crossbreeds is 7½ months old, and is laying right around 60%. Jack believes in starting pullets slowly, gambling on more big eggs from the flock. Consequently, they were six

months old before the lights went on them, and as short as a month ago, they were only laying around 35%. Though it is some extra trouble, Jack is marketing his eggs in town for the retail premium. His wife, Jean, handles the cleaning, candling and grading.

Plenty of Room

One observation that Jack passes along is that the black crossbreeds included a lot of birds that from timidity and competition did not develop as fast as the others. Jack felt this was natural, just as some of the cows in our pen stable are liable to be pushed around by the others. We take care of timid cows by providing plenty of feed space where they can't be cornered. Jack uses the same management procedure on his chickens.

To give the grown birds five square feet or better to roam around in, Jack gradually culled out the timid and slow developing birds and gave them a pen to themselves with plenty of feeders. His Red-Rocks are quiet enough so that he was able to do this during the daytime as he fed or gathered eggs. He found, for instance, that a whole bunch of timid birds gathered in one corner when he fed scratch grain in the litter. He moved this whole group when he found that all of them proved to be far behind the rest of the flock in coming into production.

Right now, Jack's culled flock of "backward" birds seems happy and cheerful. He's guessing that eventually they may out-produce the rest of the flock.

REAL GRASSLAND FARMER

Martin Sine can hardly be called one of our Inlet Valley farmers. His farm clings to the steep hillsides that make

up the valley in which Sunnygables Farm is located.

Last year Martin started a small dairy on his hillside farm, completely on his own and with precious little money. Every available cent he had went toward building the grass output of his stony hills. He is so convinced that grass will grow if it is fed that he is willing to spend his last cent on fertilizer and good seed. The next priority for his money is directed toward good producing cows.

Real Setback

This summer while he was milking his small herd of Guernseys, lightning struck Martin's small, old-fashioned barn. He was able to get the cows out, but everything else—feed, hay, machinery and a freezer full of home produced food—went up in smoke. It was enough to send most fellows to town for a guaranteed weekly salary and Social Security.

Sticks to It

For a few weeks, Martin's spirits were none too high, but he kept at farming. In a borrowed barn, he set up a makeshift milking stable, started to accumulate winter feed for the herd, and planned a new barn.

Though he might be able to borrow money to build a more elaborate building, Martin has set aside a sum for sheltering his herd that is based on the absolute minimum investment per cow. He has lengthened the site where the old bank barn stood to make room for the most inexpensive open pen barn he can build. The general plan is to provide cover over his present herd, with room for expansion as he accumulates more cows.

The Cows Pay

Though Martin anticipates a fairly good sized herd when the forage producing capacity of the farm grows, he is not going to build for the larger herd right now. His scheme is to provide minimum shelter for the herd he has, and when they have paid for it, he will add more. He plans to buy good roofing for the building, but the rest of the materials he is skidding out of the nearby woodlot this winter, or dickering for secondhand.

Paved Feeding Area

As I reviewed Martin's open pen stable plans, my first suggestion was to include a paved feeding area. My feeling was that the bedding saved, the

convenience in cleaning, and the convenience of paved traffic lanes would quickly pay for the cost of pouring the floor. Martin proved to me that there are few universal recommendations that can be given for a pen stable plan. His object is not to save bedding but to make all the manure he can.

To improve his hillside farm, Martin accurately appraises manure as one of his best tools. For that reason, he is willing to handle all the manure he can make for spreading on the steepest knolls and the thinnest soil. Instead of a paved area he plans extra head room in the pen to accommodate a deeper manure pack. As for saving bedding, he follows the same principle he does in buying plenty of lime and fertilizer. The more straw he returns to his hilly fields, the more return he will get from them—even though he will have to buy all his bedding this year.

I think Martin's sensible outlook toward his hilly farm and the courage with which he is following his convictions about soil building are well worth following. I often wonder, as I travel across the black, level fields of the Corn Belt, just what some of our northeastern hillside farmers could do with a perfectly level, fifty-acre field of fertile soil. I'll bet they'd grow grass.

Bouncing Baby

Following the development of sponge rubber matting some years ago, we have had a lot of fun finding uses for it at Sunnygables. It is the same type of rubber used today in automobile seats, and in many other cushions.

We used sponge rubber to take the jar out of tractor and implement seats, to protect us from sharp corners and angle irons on farm machines, and as covering on a table where we sorted eggs.

Jack and Jean Conner, who are the proud parents of a seven-month-old baby boy, found what may be the most ingenious use for sponge rubber matting. Jack found an old sheet about a half inch thick which he trimmed to fit the playpen. Jean covered it over with a blanket, and they turned the baby loose. The rubber sponge protects him from bruises, and gives good insulation from floor chill. I'm not quite sure, but I half suspect that Jack now just tosses the baby into the playpen instead of carefully setting him down. If he does, the Conners can claim Inlet Valley's most bouncing baby boy.

Our neighbor Jim Hall is finding that all the problems of owning land don't originate out of its operation. Here, Jim surveys damage to his fence as a result of this year's invasion by hunters. Paths through the wheat field, ruined fences, open gates, and deliberately torn off "Posted" signs at Jim's

and at Sunnygables are all evidences of the average hunter's lack of consideration. If Jim is as mad next year as he was when hunting season opened this year (and he probably will be, for he tore the seat of his pants while fixing his fence), he will be busy chasing hunters off his place.

Service Bureau

By H. L. COSLINE

"GUN SHOP" PROPRIETOR LOCATED

In the November 4 issue there was an item titled "Gun Shop 'Moved'" which told of the experiences of two of our readers in ordering guns from the Cold River Gun Shop in Alstead, N. H. This company apparently went out of business, and we were unable to locate Martin Owen, operator. We asked our readers for information as to the present whereabouts of Mr. Owen, and have had a number of replies. Although we previously had been given his name as Martin Owen, the data we now have would seem to indicate that Martin may have been his middle name and that his correct name is Paul M. Owen, assuming there is only one Owen involved in this business.

Briefly, the Post Office Inspection Service advises that Paul M. Owen, formerly of the Cold River Gun Shop, appeared in Federal Court at Concord, N. H., on September 6, 1950, and was ordered to make restitution for unsatisfactory business transactions. It is suggested that people who have outstanding claims against Mr. Owen, or the gun company, send detailed information to the United States Probation Officer, Concord, N. H.

— A.A. —

C.O.D.

My son is in the Air Force. While he was stationed in Texas, he had some identification pictures taken. The studio asked him if he wanted an enlarged print to send home. He said he didn't because the picture was poor. In spite of that, they sent one to me C.O.D. \$5.46.

I paid for the package, believing it was something my son had ordered. He now tells me I made a mistake paying for it. Can you get my money back for me?

During World War II, many such schemes were worked on the families of servicemen. Evidently unscrupulous outfits are again starting to function along these lines. Should any reader receive a C.O.D. package from a relative in the service without having been advised to expect such a package, it would be wise to check with the serviceman before paying any charges. Usually, instructions accompanying such a shipment state that it should be held fifteen days before being returned to the sender. That allows enough time, in most cases, to get word back as to whether the package actually was sent by the man in the service.

The Service Bureau is writing the studio involved in this particular case, without much hope of getting satisfaction. The boy has since left the Texas base.

— A.A. —

HINDSIGHT

I signed a contract to take a correspondence course in art. The agent told me that I could quit any time after three months. Now that school has started, I don't have time to do the lessons. The company will not release me from the contract and tell me I must finish paying for the course. What should I do about this?

Unfortunately, there isn't anything that can be done so far as we can see except refuse to pay and dare the school to sue. As we have pointed out many times, verbal promises of agents carry no weight. Unless there is a clause in this contract that states it can be cancelled after three months, it can be enforced. Many contracts even carry a printed statement that verbal statements of agents are not binding.

We have had some success in getting releases from contracts for our subscribers in cases where there is real hardship involved, such as extended illness. In this case, however, any persuasion we might attempt would be met with the response that our subscriber knew she would be going to school in the fall at the time she signed the contract.

FROM EVERY ANGLE

...the Craine NUROK Silo is good news. Now you can afford the rich beauty and dependable service that only tile can give you.

ACID TESTS PROVE IT!

Craine's patented tile stave construction gives you more for your money. There's no cement in a Nurok—not even in the joints. That means longer life, minimum upkeep. Triple-sealed insulation makes better silage.

CRAINE'S THE NAME

You Can't Beat a HOMELITE

- For Fast Cutting
- For Easy One-man Operation
- For Low Maintenance Cost

It's really true. Men who have had plenty of experience with chain saws are amazed when they see a Homelite Saw in action. Not only for its fast, smooth cutting... as much as an inch per second... but also for its easy handling, its perfect balance and pivot action, this saw really tops them all.

Built and backed by Homelite, manufacturers of over 285,000 gasoline engine driven units, this saw has every feature you want... a high powered, rugged and dependable engine, an automatic clutch, an automotive type carburetor, and a perma-sharp, chrome-plated chain that stays sharp longer than other chains. Yes, and what is just as important, with Homelite Saws you can always be sure of getting service promptly and efficiently any time you need it.

Question Box

How can a young man get started with a high producing herd on a limited amount of capital?

Artificial breeding will provide good inheritance from the male side without buying a valuable bull. Sometimes an excellent aged cow can be bought at a reasonable figure and might still give you a couple of heifer calves. Often some dairyman who has a high producing herd but is not specializing in selling stock will be a source of foundation stock. Any way you get started will require time and a good knowledge of cows. Don't move too fast!

When bulls are being proven how much effect does the competence of the owners have on the records made by daughters in different herds?

Unquestionably a cow will not produce up to her full ability if she isn't fed and handled properly. However, these things average out to some extent where a bull has daughters in various herds. Anyway, a better way of proving a bull hasn't yet been found.

A few years ago many farmers were growing sweet clover for pasture. Now we hear practically nothing about it. Is there a good reason?

Two of the handicaps of sweet clover were that, being a biennial, it had to be seeded every year, and it was not particularly palatable to dairy cows. The first objection was the most serious, and with the increased importance of saving labor on farms the emphasis has been put on perennial legumes. Birdsfoot, for example, is more palatable than sweet clover, and, once established, stays indefinitely.

"I wish to make a homemade manure loader and would like to hear from anyone who has built one. If any reader has plans on how to make one, I would appreciate any helpful information."

We would be glad to hear from any reader who has plans or information on how to build a manure loader. Address *American Agriculturist*, Dept. M-L, Ithaca, N. Y.

Can mushrooms be grown in a cellar?

A few years ago we would have said your chances of success would be relatively small. However, at the present time you can buy mushroom trays from nurserymen. They contain dirt, humus and mushroom spawn. You can put them in a cellar and keep them watered and you will get several mushroom crops throughout the winter. We tried this last winter and found it satisfactory. Perhaps no considerable sum of money was saved, but we ate more mushrooms and enjoyed having them and seeing them grow.

We have some home-grown popcorn which doesn't pop satisfactorily. Can you tell us why?

The chances are that the moisture content of the popcorn is too low. One recommendation is to put it in a glass jar together with a few drops of water and leave it for a time, but frankly we never have had too good results with this method. One of the best things to do is to hang it on the cob in an unheated garage or shop. It will gradually absorb moisture from the air until the moisture content is about right for popping.

In irrigating crops, how much water should be added at one time?

It is advisable to soak the soil to a depth of 5 to 7 inches and the amount of water necessary to do this varies with the kind of soil. It will be somewhere between 1 and 3 inches. This amount of water is usually applied about once a week during dry weather.

PROGRESS through COOPERATION

League Facilities Gave Producers

Control Over Record-Breaking Surplus...

The first eight months of 1950 saw one of the greatest floods of fluid milk ever produced in the New York metropolitan milkshed. From January until late summer, steadily mounting milk production overtopped the record highs of 1949. Dairy men were faced with the peril of a huge surplus.

Fierce competition for markets and bitter price wars added to the dangers. Except for one thing, the situation presented all the explosive factors which blew the market wide apart in the days immediately following World War I. That single exception was the fact that the Dairy men's League is today incorporated and functioning as a producer marketing cooperative. It not only has the organizational set-up for directing surplus Class 1-A milk into manufacturing channels, but it has the actual physical equipment for manufacturing surplus into salable products.

The Cost Ran High

Even the League was not prepared for so great a surplus. It not only had to re-ship milk from fluid receiving plants to manufacturing plants, but it had to expand the production capacity of its manufacturing plants.

Buyers of manufactured dairy products would not, of course, pay the extra cost of this trans-shipping, so the products manufactured had to be offered for sale at prices that were competitive with products from lower-cost producing areas.

Everybody Benefited

Unaided by any diversion or relocation differential from the market pool, the League spent almost \$1,250,000.00 in keeping the great surplus from reaching the market as distress milk. By this unselfish action, League members kept control of surplus in the hands of producers and prevented it from falling into the hands of those who would use it for price wars or other destructive practices.

Every single dairyman in the milkshed profited from the expenditure, though League members alone contributed to it. We League members don't begrudge the money spent; it saved us from a greater loss in the long run. But we do feel that the market pool should pay a diversion differential to offset such costs, particularly when everybody in the pool reaps an equal benefit.

DECEMBER DELIVERY

A Sound Practice with Many Advantages

DURING December, G.L.F. Stores and Agent-Buyers are taking orders and arranging for delivery of fertilizer with liberal discounts under present quoted spring prices. For years large users of fertilizers have found that getting part of their spring needs on the farm during the winter pays in several additional ways:

1. The fertilizer is fully cured—G.L.F. Plant Foods that are put out in December have been made up far in advance. They are sufficiently cured to store well under reasonably good storage, and the mechanical condition is guaranteed for good drillability.

2. The grade you want is in your own barn—At the peak of spring planting, the demand for certain grades frequently

is much greater than spring production and substitutions are sometimes necessary.

3. Early movement means better service—When fertilizer moves out of the plant during December it allows full plant production to meet the late season demand. This full season production cuts overall operating costs which is reflected in the original purchase price to all G.L.F. patrons.

4. Price Protection—Your purchase of G.L.F. fertilizer now not only protects you on any spring price decline, but, more important at the present time, insures you against possible price increases.

Cooperative G.L.F. Exchange, Inc., Ithaca, New York.

Place your Order Now for G.L.F. Plant Foods

First choice of farmers for year-round work

because only **SUPER-SURE-GRIPS** give you all three extra-traction features

1 **Wedge-Grip Action.** Note how Goodyear **SUPER-SURE-GRIP** lugs are set closer together at the shoulder than at the center—don't flare out as in most tires. **Result:** soil is *wedged* between **SUPER-SURE-GRIP** lugs, giving a stronger, firmer grip.

2 **Straight-Bar Lugs.** Because Goodyear's husky lugs are set straight as a ruler, they give you more gripping surface than lugs that toe in. **Result:** **SUPER-SURE-GRIPS** give you *full-lug* pull for their full length and depth—"the greatest pull on earth"!

3 **Self-Cleaning O-P-E-N C-E-N-T-E-R.** Only Goodyear has O-P-E-N C-E-N-T-E-R design with straight, even-balanced, equal-size, wedge-grip lugs—with no mud-collecting connectors, hooks or knobs. **Result:** more even pull, smoother ride, longer wear!

*That's why **SUPER-SURE-GRIPS** are first in traction! They pull where other tires won't; keep your tractor going in all seasons—yet they cost no more!*

THE EDITORIAL PAGE

BEST IN 108 YEARS

YOU HOLD in your hand the Third Forum Issue of *American Agriculturist*, devoted to maintaining free enterprise and the liberties of the American people. It has taken your staff months of hard work to give you this great issue, and I hope you will have time to read it carefully, think about the statements therein, and save the issue to read again. You will be impressed with the great leaders, both in agriculture and business, who have given us brief statements about what they think is happening to our liberties and what can be done to save them. But equally or even more important are the views of the farm men and women and boys and girls who have expressed themselves in this issue on the subject of freedom, which is so vital to all of us.

We, your staff of *American Agriculturist*, consider this the most important issue that has ever been published in the long 108 years' history of the publication. In all that time our country has never faced a worse crisis than we are going through now, nor has there been a time when careful judgment and wisdom were more needed than they are now.

This Forum Issue is an effort to put before you the facts of the present crisis, in the hope that these facts will arouse you as a citizen of this Republic to the need for thought, prayer and action. If we solve our problems, if America is to continue in the future as it has in the past as the land of opportunity, it will be through the clear thinking and actions of the people themselves.

"THE CHARACTERS LIVE AGAIN"

DR. A. K. GETMAN, Assistant Commissioner for Vocational Education in New York State, said after he had read the manuscript of *THE SETTLERS* by E. R. Eastman:

"The ideals, hopes and difficulties of the pioneers are presented in a manner to secure and hold the interest of high school pupils. It is an exceedingly valuable contribution to the supplementary reading material for high school pupils studying American history."

Romeyn Berry, farmer, author and commentator, says:

"The characters that live again in Mr. Eastman's novel make the reader revise the contribution of the settlers to the making of the Northeast as no historian could hope to do. The book is one more important addition to the evergrowing epic of America."

If you want to read a great story or make a fine Christmas gift, send \$3.00 for each copy to *American Agriculturist*, Department TS, Savings Bank Building, Ithaca, N. Y., and copies will be sent postpaid.—H.L.C.

THE WOMEN PAY

IHAVE always been conscious of the fact that when it comes to war, the women pay. War is bad for all of us. Men suffer and die—but they do get out of it a change, some adventure, some excitement, some pomp and circumstance—while the women stay at home, keep the families together, and eat their hearts out with loneliness and worry.

When woman suffrage was proposed I was all for it. I thought woman's influence would clean up our politics, give us better political leaders, and a better country. Now I am not so sure. Certainly, woman's influence has made no difference in keeping us out of wars. Of course, when we once get up on the edge of war, as in Korea, we must go through with it. It is too late then for peace. But foundations for peace must be laid immediately after a war, and kept sound all the time. We all have responsibility in this job, but I think women more so than men, because they have most at stake.

Why is it that so many of you women have not made better use of the suffrage? Is it because you

By E. R. Eastman

vote the same as your menfolks do? Is it because you have been so busy with your families and your other interests that you haven't kept yourselves informed and haven't taken part in citizenship affairs? Is it because being more emotional than a man, you vote with your emotions rather than with your minds?

I don't know. I do know what war costs you in tears and sacrifice. I do know the responsibility you carry as wives and mothers to preserve for your children and your children's children the liberties which our forefathers gave us. I do know that unless the women in this country exercise more influence than they have in the past on government—local, state and national—in the choice of right men to lead us, irrespective of party, in their insistence that these political leaders keep us out of war, our so-called civilization is fated to go down as have other nations in history when their women ceased to care.

NEW MILK CONCENTRATES MAY REVOLUTIONIZE BUSINESS

TWO DIFFERENT milk concentrates have been described in the public press recently, either or both of which could completely revolutionize the whole milk business. One of them, the result of some seven years' research, has been worked out by the National Dairy Products Corporation, which holds the processing secret. First sales of this concentrate are being made in Wilmington, Delaware. It is to be in one-third quart containers. When the consumer gets it, she stirs in two parts of cold water to make a full quart, and it is claimed that it is impossible to tell the difference between the product and fresh whole milk.

It is easy to see the possibilities. The concentrate is only one-third the weight of whole milk—making for cheaper transportation—and one-third the volume, making it easier to store at home. In concentrated form it can be used in tea or coffee or on breakfast foods, and when water is added, it is just the same as good drinking milk. It is said, also, that in concentrated form this milk will keep wholesome for three or four weeks.

The other new milk product is a frozen milk concentrate, and its advocates claim that it has the same marvelous possibilities as the frozen citrus juices which have had such a great boom in recent years. The frozen milk concentrate can be shipped anywhere, has great possibilities for use by the military forces anywhere in the world, with huge savings in transportation charges. With water added, it is said to taste exactly like fresh milk.

Scientists who have been working with these concentrates think that markets can eventually be developed which will absorb more milk than our dairy-men in America can possibly produce. From the point of view of northeastern dairymen I can see one danger. If these new products can be developed, as now claimed, so that the concentrates can be shipped easily anywhere and held sweet for a long time, northeastern dairymen stand to lose the hold which they now have on our great eastern markets.

OLD TRUTHS FOR NEW DAYS

ACCORDING to the Ithaca Rotary News, over 18 million marriages have taken place since 1940; over one-third of all the present families have been formed; 63 per cent of the people in the United States do not remember World War I; 52 per cent do not remember a Republican administration; 48 per cent do not remember conditions before World War II; and over 30 million babies have been born.

Consider these interesting facts and remember that nearly everything we learn has to be learned all over again by each new generation, by the hard

way of experience. Then you will understand many of our present problems. When my generation was young, we were taught economy, the value of a dollar, the necessity of saving; we were taught that it was just as important for a government to be economical and save as it was for the individual; we were taught individual responsibility, and that when we received something for nothing we had lessened our own self-respect.

Now consider the millions of young people today, many of whom have been taught these old basic principles in their homes but have never known any public policies or philosophy except the "give-me's"; the something-for-nothing fallacy. All that young people hear outside their homes is the idea of more and more pay for less and less work; high government spending that security comes; from government instead of through our own initiative and responsibility; and the philosophy that all we have to do when we get into trouble, financial or otherwise, is to turn to Uncle Sam.

That kind of thinking has been thrown at millions of our young people for a whole generation, and it is no wonder, nor can they be blamed, that many of them think it is the right kind of thinking. It is our job and our responsibility to take the basic principles that have made America great, fit them to present day conditions, and get them to working again. It is a tough job, but it can be done if enough of us are convinced of the necessity.

THE PEOPLE SPOKE

TO EVERY citizen interested in good government, to every citizen interested in keeping the liberties of the people intact and America free, the election this fall gave hope, not especially because one party or another made gains, but because the people themselves gave more evidence of doing their own thinking than they had in years.

In the first place, the people discharged their responsibility as citizens of the Republic by turning out to vote in numbers that broke the record in an off-presidential year.

In the second place, there probably was more splitting of tickets than ever before. Certainly this was true in New York City, where the people defeated both parties and their political bosses and gave an independent candidate, Acting-Mayor Impellitteri, an overwhelming vote.

In Connecticut, Governor Bowles, outstanding exponent of the "give-me's", was defeated; in California, Governor Warren, a great and good man, and excellent governor, won an overwhelming victory over the so-called magical name of Roosevelt; in Maryland, Senator Tydings, who pooh-poohed the idea that there were Communists or radicals in the State Department, was defeated.

The voters of New York State, frightened by the prospect of the Tammany bosses in New York City taking over the whole state, re-elected Governor Dewey by an overwhelming majority. And perhaps most significant of all, Senator Robert Taft of Ohio won re-election to the U. S. Senate by a huge majority, with heavy support even in the industrial cities, against bitter opposition and a house-to-house canvas conducted by the labor lords.

Yes, the people spoke, and they will continue to speak against the leaders and the politicians of either party whenever they have facts that indicate that those leaders are failing to give us good government.

EASTMAN'S CHESTNUT

MR FRED MORRIS, county agent leader for New York State, and Hugh Cosline, associate editor of *American Agriculturist*, were out hunting one Sunday morning, Hugh said:

"What would Rev. Dodds think if he knew we were out hunting this morning?"

To which Fred replied:

"I don't know, but I couldn't have been at church this morning anyway; my wife is sick!"

Read It With Prayer

OF all the important messages in this great Forum Issue of *American Agriculturist* devoted to free enterprise and to maintaining our liberties, none is more important than the following message especially written for this issue by the Hon. Warren R. Austin, head of the United States delegation to the United Nations.

This message should be read and read again from time to time, thoughtfully and prayerfully. Then we should search our hearts to make sure that every one of us as individuals is determined to do our part in supporting the United Nations and to do everything else we can to keep America free and to bring about peace on earth and goodwill toward men.—E.R.E.

Peace and Freedom

By WARREN ROBINSON AUSTIN

Chief of the United States Mission to the United Nations

THE Charter of the United Nations was adopted in the Senate by a vote of 89 to 2. It has been declared repeatedly that the United Nations is the cornerstone of our foreign policy. Also, it is the covenant of international principles of fifty-nine other nations.

The Charter of the United Nations is the most concrete expression of agreement among nations on fundamental principles of high ethical quality essential for the maintenance of peace and freedom. But neither these principles nor the Charter are self-executory; they must be animated with spirit, devotedly applied by nations and individuals to the great and small problems of life. No problem is so trivial as to be overlooked in this great plan. None so great as to be evaded. No individual, however obscure, can avoid impressing, to some extent, his own conviction and conduct upon the objectives which we call our basic liberties, and which are especially cherished in the United States.

During the short life of the United Nations, these liberties have already been extended to the peoples of several new countries: the Philippines, Israel, Ceylon, India, Pakistan, Indonesia, and Korea.

Korea has illustrated what the United States stands for as a faithful member of the United Nations. First, it was a leader in promoting the establishment, through the United Nations, of a free government in Korea. Now, it is providing military forces and other assistance, with other member nations, to a Unified Command under the United States. At the request of the United Nations, the United States designated the Commander of such forces, General Douglas MacArthur.

After successful performance of the peace-making functions of the United Nations in repelling aggression with armed force, the United Nations Command is now attacked from across the Northern Border of Korea by Communist Chinese armies, and the world is thereby threatened with general war. The United Nations is trying to stop this new aggression by pacific methods. However, the world is not blind to the character of the opposition in the United Nations begun in August last, and continued with bitterness by the Soviet Union and its satellites. It foresees the need for increased military preparedness to give strength to our peaceful tenders.

The vigor of the action taken in the

United Nations itself depends upon the stamina and spirituality of the citizens of the various freedom-loving countries that are making this fateful stand against bloodthirsty madness. Around the globe, those who understand this new aggression are so determined to prevent general war, and to stop aggression wherever it may start, that they are willing to suffer and to strive, and to sacrifice peace, for the time being.

Success with peace can never be achieved by waiting for better circumstances. Peace is an expensive attribute of life. It requires its beneficiaries to be willing and ready to fight for it instantly. We Americans join in the defense of peace as a supreme obligation.

Right now, we face heavy calls for men, munitions, and vast treasure. We cannot wait for better circumstances. We forthwith engaged in strengthening our military establishment, and in stepping up the productive capacity of our farms and factories. In this great undertaking every citizen will participate. I believe he will do it with patriotic fervor. But whether he wills it or not, he cannot escape participation.

As the United Nations does in Korea — prepare to uplift a people scourged with war, and help to rehabilitate them economically, and aid in solving their social, cultural and humanitarian problems— so does it conduct a program of assistance directed toward millions of people who must be liberated from ignorance, hunger, disease and discrimination. In this work the United States must also take a leading part, and the citizens of the United States must bear a very large share of the responsibility for experts, doctors, missionaries, and for technical assistance. This great movement will go on continuously—probably for a long time—and, therefore, needs to be studied and participated in more intimately by the citizens of the United States. This civic service is not solely altruistic, for the consequences are sure to bless the givers of such aid. They include the removal of causes of war, the development of conditions in which peace can prevail, and the vitalizing of those basic liberties which we cherish.

This role is a moral obligation of our country, established under God's guidance in the new world, and whose spiritual aspirations have brought such abundant blessings.

A Welcome Gift!

HONESTY— The Foundation of Freedom

By *Walter Dodds*

Pastor, First Presbyterian Church, Ithaca, N. Y.

THE FREE enterprise system of America or any other system stands or falls on a foundation of honesty.

Recently I returned from an extended trip through the Near East and Egypt, where I was appalled by the fact that I met no one who believed that the common people of any of the lands I visited would fight for their country against communism. Why? Because the common people have lost faith in the honesty of their political and military leaders.

Walter Dodds

I came home convinced that the strength of America lies in the basic honesty of politician, businessman and laborer. When I made that statement in the home of a relative soon after my arrival, I was greeted with a hoot of derision. America honest? Look at the papers telling of police corruption in our great cities and the conviction of congressmen for corruption. Still I contended that even though my estimate of my countrymen's basic honesty is wrong, it is still true that the strength of a nation lies in the basic honesty of its people.

A Real Menace

We are worried about the menace of communism. It is real. But my travels revealed to me one thing: Communism has never won a nation that had not first lost its confidence in the integrity of its political, military, and business leaders. Communism is a vulture that eats the dead flesh of corruption. We all know that the rapid spread of communism in China was not so much a conquest but a default. The people lost confidence in the honesty of their leaders and the Reds moved into that moral vacuum without any appreciable resistance. In the very realm of self-interest, government officials should know that "It profiteth not if one gain the whole world if one loses the integrity of his own soul."

I am in favor of building military defenses for our nation, but there is a foundation on which military might rests—and that is integrity. After what I saw of corruption in high places and low abroad, I came home determined that for the rest of my life I am going to work for the building of the integrity the Bible teaches. Without it our nation cannot stand.

We need to remember that one-fifth of the Ten Commandments stress the need of honesty; that two of the Ten Commandments deal with stealing and lying. When Moses wanted to build a new nation he laid the foundation in ethical and religious conduct.

In building personal honesty—and that is the only kind of honesty there is—we have two helps:

First, we must know that honesty is a learnable habit. Moses believed that it could be taught. Since that time the life of every honest man proves it. Little children are not born honest; they can hardly distinguish between fact and fiction, and for the first few years are not much interested in finding the boundary. But they soon learn

that there is no fun in playing games where the players cheat; and that truth has value in itself. If honesty is a habit that can be learned at one age, it can be learned by hard work and God's help at any age. Honesty is a learnable habit.

Second, we can build personal honesty if we try to be creatively honest. Honesty is always more than the negative commandment "Do not Steal." Honesty is a creative giving of more than is promised.

There is an old poem my father used to use that illustrates this thought. I cannot find the author's name so cannot give credit for it, but I still want to share it with you:

I never cut my neighbor's throat,
My neighbor's gold I never stole,
I never spoiled his house or lands,
But God have mercy on my soul;

For I am haunted night and day
By all the deeds I haven't done;
O unattempted loveliness,
O costly valor never won.

Show me a social organization that is prospering and you will show me one where there is creative honesty. Start with the smallest social group—the family. Its happiness is marred by a strict fifty-fifty honesty, but it is made where both parties try to give more than is promised. No true lover ever says to himself or to his beloved, "I have been perfect, I have honestly fulfilled my marriage vow." Never! he is convinced that he has not given enough and that is what makes his beloved happy.

In business, no employee is satisfied with a business that gives him just what is promised. No employer is satisfied with a clock-watching employee who gives just an "honest" eight hours' work and not a second more. Creative honesty that shares profits and boosts production, that increases the whole standard of living is the thing that has made America strong.

The effectiveness of our boys fighting in Korea does not lie in honestly doing their duty; it lies in honestly doing what is necessary beyond the demands of duty.

So, as we individually want the honesty that will be a bulwark to the nation we love, let us thank God that from Moses to our time we have learned that it is a habit that may be cultivated at any age by the grace of God and by hard work; and that it must be a creative honesty that has no limits to its giving. On the foundation of such honesty our free enterprise system can stand.

TIME SAVER (?)
"I'll Pass Him on This Hill," Joe Raved.
(He Should Have Used His Head)
Alas for Joe, The Time He Saved
He's Spending Now in Bed!

“Our Help in Ages Past... Our Hope for Years to Come”

America was opened by men with God upon their minds. Their vision was prophetic, their passion was freedom. To our forefathers America was promises—promises faithfully kept in the land’s lush prairies, its fish-filled streams, its rolling country rich with wood and mineral. America was man’s new-found land of opportunity . . .

New Americans flocked in from the nations of the world. Fleeing religious, economic and political problems, escaping famine and despair, seeking freedom and opportunity, they came from the old countries to the new—from England, Scotland, Ireland, Wales—from Germany, Denmark, Sweden, Norway—from France, Italy, Russia, Poland—they came in their millions from these and many other countries. And they came to work in their own land, and to pray in their own churches. The land opened to these pioneers. It received their sweat and rewarded their labors. On its rich soil they raised their generations and marked their names. *Deeply in its heart, they planted their faith.*

Over the American farmland, that faith blossomed sweetly. It grew from a sapling to a great tree, which now shelters millions from storms of the spirit. Today the churches of all denominations in America give outward and visible signs of the strength and purpose within our people. And in a new time of global doubt and fear, of clouded issues and terrible distress on the continents

which our forefathers left, America’s churches are a source of the courage and perception we need.

Now another Christmas is over the land . . . another old year draws to its close. Joyously, at this time of spiritual accounting, churches are bright and fragrant with the faith of our fathers. Over Bethlehem the Star still burns, and if this statement may close, reverently, with a text, let it be from the writing of David, the poet, the great singer, who began as a tender of sheep, and became a king in Israel. For all of us in America today, a quotation from the Psalms is at once a rededication, and an act of faith in church and country: *“Be thou my refuge henceforth and forever, and my portion in the land of the living.”*

In these anxious days, it seems fitting to repeat this message of faith in the precious things for which our nation stands. To all our friends on the farms and ranches of America we of Swift & Company wish a good Christmas and a happy New Year.

John Holmes
President

FREEDOM *Is* ON THE MARCH

IN 1891, which is really not so long ago as history measures time, the Rocky Mountain Herald contained this news item:

"Police officers have been stationed at 16th and Curtis Streets to enforce the ordinance against driving at the rate of more than four miles an hour. The deadly horse and buggy catastrophes have piled up several serious if not fatal cases during the past week. Meanwhile, in a southern state, a whole family was hurled to destruction by a team of runaway oxen!"

That was only 59 years ago! And now we have planes that can travel faster than sound.

Think how far we have come in the matter of improved transportation in a relatively few short years. And look at what we have done with communication. I can remember when there was no R.F.D. delivery. I rode a horse five miles to get a little mail once a week. I recall paying 10 cents at the county fair grounds for the privilege of going into a sideshow and putting

BY E. R. EASTMAN

a couple of tubes in my ears. If I listened very carefully and used a lot of imagination I could hear some faint, scratchy sounds that sounded a little like music. No, that wasn't the first radio; it was the first phonograph.

There were no rural telephones when I was a boy; a telegram always meant disaster, the sickness or death of a distant relative. Since then we have developed all manner of rapid communication, topped by the radio and television, which bring anything important that happens in any place in the world into our own homes, sometimes within a few minutes after the event.

In farm machinery we have progressed from the grain cradle to the combine in one lifetime. The other day I asked a group of young people how many of them had ever seen a grain cradle and only two or three raised their hands.

Beyond Imagination

Marvelous as have been the material changes of the last fifty years, we have only begun; we have only scratched the surface. Not the most imaginative member of the Liars' Club can prophesy what the next fifty years will bring forth, providing we don't blow ourselves to pieces with our own gadgets! In 1912, Olds, the automobile manufacturer, said:

"The car I now bring out is regarded by me as close to finality. I do not believe that a car materially better will ever be built, so I have called it my farewell car."

That was in 1912. Today you wouldn't drive a 1912 model to a dog fight!

No one can take even a casual glance at the changes that have occurred in the recent past and at our magnificent inheritance without feeling with Tennyson that we are indeed

"Heirs of all the ages
Standing in the files of time."

And yet what unworthy heirs! With all of our getting we have failed to get understanding and wisdom. Many of us want to throw all of our great

heritage out of the window or trade it for a mess of pottage. In a New Hampshire graveyard some years ago I found this epitaph:

"My son, that which you would inherit you must own anew."

Not Handing On Torch

Our greatest heritage of all in this Republic is the freedom which cost our fathers so much in blood, sacrifice and tears. We are not owning our liberties anew. We are not handing on the torch of liberty. On the contrary, our generation is destroying liberty, for even before World War II there was less liberty in America than at any time since before the Revolution.

We are now in another war which could lead to the worst one yet. Our trouble is that we have the means without the end; material progress without spiritual progress; we are over-capitalized in non-essentials; we want more and more pay for less and less work; we are smothering in our own comfortable featherbeds. Every time that we as individuals, institutions or organizations petition the government to do something for us that we ought to do for ourselves, we imperil our liberty and go a step farther towards statism. There is no such thing as something for nothing. If we ask favors, we must give them; and in the case of asking the government, the chances are that we will give in return something far more precious than we will ever receive.

As a result of the hard work and sacrifices of the men and women who gave us America, we have material progress beyond the wildest dreams of our forefathers. But they had something far more precious, something without which all of our gadgets are worthless. They had a great idea. They knew the value of and were willing to fight for the right of the individual to possess his own soul, and the principle that government exists for the people, never the people for the government.

Ask Yourself

But what are we of our generation doing? At the recent election, a larger number of people turned out to vote. That was encouraging, but millions failed to exercise this precious privilege and obligation. How many of you use your influence in the selection and guidance of your local political leaders? How many of you attend your school meeting and your town meeting, the most democratic institutions we have left? Surveys show that less than half of our voters take the trouble to express their wishes at the ballot box, to say nothing of exercising leadership in the guidance of government officials. But should we lose our liberties, millions of us would go underground and incur all kinds of hardships and sacrifices to try to restore them after it was too late!

No wonder our political leadership is

so often inefficient, selfish and misguided! No wonder we are ruined by taxes! Look at the record of spies and Communists in our Federal government in recent years. No wonder we go from one world war into another! No wonder our boys die in Korea, while you and I permit these situations to develop because of our own indifference! I heard Admiral Nimitz, one of the great men of our time, say the other day that the people and their fighting sons and daughters win the wars and the politicians lose the peace. The politicians are our responsibility, yours and mine. There is no use fighting a war for freedom in Korea or anywhere else and losing it here at home.

Beware of False Promises

Take a look at what is happening to our liberties here in America. See the politicians entrenching themselves in power, taking away the basic liberties of our people! See them grab control of essential production, transportation, trade, banking, and even private property! See the politicians buying the favor of unthinking people by offering security without work, safety without courage, salvation without character; in short, see the whole program of something-for-nothing system of dole, subsidies, pensions and hand-outs which every sane man and woman knows can only bring us all finally to poverty and slavery!

Look at what is happening to our dollar, largely because of spendthrift operations that far outrun income, at a time when we are loaded down with taxes that already take one-fourth of every working day to pay! You know what is happening to our savings, our bonds, our insurance policies, even the paper money in our pockets. We have no real prosperity; it is artificial and false.

Business men are harassed and coerced, farmers are told how many acres they can plant, how many bushels they can sell in the market place. Do you want to go the last mile and have government tell you when to go to bed and when to get up in the morning?

Bureaucratic power, government by edict of appointed bureaucrats instead of government by laws passed by our Representatives is moving swiftly, under the pretense of handing out "free" benefits, to dominate the fields of housing, health, education.

Not Too Late

Well, you ask, what can we do about it? It is late, but maybe not too late. Last winter 150 representative citizens, leaders in business and agriculture, met in Rochester, New York, to see what could be done to slow up the trend toward socialism—half brother of Communism—in this country, to stop the trend toward statism, and to return some of the lost powers of the people to the grass roots. This Rochester meeting set up an informal organization under the name of "Freedom on the March." A budget was raised, an office opened in Ithaca, N. Y., and an executive secretary, Mr. Douglas Hewitt, put on a full time job. A board of directors, comprised of outstanding leaders in New York State in

business, agriculture, education, and the professions—acting always as individuals, not as the representatives of any particular organization—are directing the activities of "Freedom on the March."

Teamwork for Citizenship

"Freedom on the March" will work with all interested organizations and meetings, including farm organizations, chambers of commerce, Rotary, Kiwanis, Exchange and Lions Service Clubs, and other freedom organizations throughout the country. It will help them to get speakers on their programs, to distribute literature outlining the facts of what is happening to our liberties, and, in general, to try to reach and arouse the general public.

The freedom organization is an example of teamwork of many groups for a common purpose and the ideal of good citizenship. It may be a slow fight, but resolute men have made their weight felt in other times and so will those supporting "Freedom on the March."

Yes, it is late, but I am optimistic. Freedom organizations are springing up all over America. Our citizens are becoming aroused to what is happening. That was proved by the recent elections. Many of the issues were not party issues, but rather were part of the vital problem of maintaining our liberties in this Republic. Millions of voters by their votes rejected statism. They gave an overwhelming defeat to the labor barons, they kicked out of office politicians who openly defended Communism in our State Department, they slapped down leading advocates of the "give-me's." There is strength and character in the great mass of our people still! We can be driven so far and no farther. We are going to preserve these liberties that cost so much to those who passed them on to us, that mean so much to us and our children and our children's children.

What can you do? A lot! You can get better informed on what is going on. You can talk against statism and for freedom with your family, with your relatives, with your friends, on your farms, in your churches and clubs. You can write about statism and the misuse of our liberties to the newspapers, to radio stations, and particularly to your Representatives in Washington and your State capitol. Politicians listen to letters from the people!

Vote Is Powerful

You can, as many did at the recent election, knock down any candidate, of whatever party, who raises his voice for anything that smacks of statism, of handing out something for nothing, of government control for our property or actions. Hit him hard with your voice, pen, and above all, your vote. Influence others to strike back at him.

You can support and fight for the candidate or office holder who is fighting for freedom. Join or support an organization that is working for freedom. Attend and take part in meetings where free enterprise and the problems of maintaining our American liberties are discussed. See that these problems are put on the programs of all farm organizations to which you belong, and other meetings which you attend. There are several local freedom groups in New York State, and doubtless in other states. If there is one in your locality, join it; if not, start one. Write to "Freedom on the March," 119 South Cayuga Street, Ithaca, New York, for help and suggestions.

The people are becoming aroused. There are more of us every day. This is no play-spell. We mean business. It is late, but we are determined to fight to stay free men and women!

COMPLETELY MECHANIZED MILKING

with the

DE LAVAL MODEL F COMBINE MILKER

- 1 The cows bring the milk to the operator.
- 2 Operator works erect—no walking, stooping or squatting.
- 3 Fully automatic—no milk to carry, pour or strain.
- 4 Individual cow production can be weighed when desired.

One operator, working comfortably erect in a simple, low-cost milking room, can milk 30 cows an hour with a 2-unit De Laval Model F Combine Milker. He doesn't walk from cow to cow—or from barn to milk house carrying, pouring and straining milk. The De Laval Model F Combine Milker does the entire job automatically—milks, conveys the milk to the milk house, strains it through a built-in filter and fills the standard shipping cans. It even weighs each cow's individual production when periodic checks are made. Throughout the entire milking, the milk is sealed in vacuum; odors and foreign matter are sealed out.

Easy to clean, simple to install and operate, the De Laval Model F Combine costs much less than you may think. Send coupon today for full information.

- 5 Milk sealed in air-tight system from cow to can.
- 6 Price—comparable with standard bucket type milker on basis of cows milked per hour.

Equally efficient with either stanchion-type or loose housing barn.

WHY LET YOUR CALVES EAT UP YOUR MILK PROFITS?

When you can feed **KAFF-A**

The safe replacement for milk

Don't feed milk to your calves. That eats into milk profits fast! Feed Kaff-A and sell your cow's milk. Low cost Kaff-A is an absolutely safe replacement for milk! When you feed Kaff-A, the milk your cows produce goes to the dairy—puts dollars in your bank account. Just 1 lb. of Kaff-A can replace up to 10 lbs. of milk in calf feeding. That means every 50-lb. box fed with low-cost hay and grain can release as much as 500 lbs. of milk which you can sell for extra profit!

With Kaff-A no milk is needed after the 10th day. Kaff-A is tested, tried, proved a safe replacement for milk. A million healthy heifers have already been raised on it! Its dried buttermilk base is known for its nutrition. In addition, Kaff-A contains other dairy by-products, some cereal products, and plenty of Vitamin A and D Feeding Oil!

Don't risk your calf's health on inferior imitations of Kaff-A. A few pennies saved now may cost you many a dollar if your calf fails to grow quickly into a high producing cow. Feed Kaff-A and be sure that your calves get the nutrition that helps develop good milkers... good breeders! Ask your feed dealer for a box or pail today.

There is No Such Thing as A FREE LUNCH

By **AUSTIN KIPLINGER**
Chicago Journal of Commerce

ONCE upon a time there was a Persian prince who was ordered by his father, the Sultan, to educate his people in economics. The young prince, full of enthusiasm, called in the wise men of the realm, who were known as "economists," and he said: "Oh, wise men of Persia, bend thyself to this great task, that we shall teach the people economics. I have but one simple commandment — you must tell the whole truth."

Austin Kiplinger

The wise men went away to deliberate and write. When a week had passed, they returned with their collective work, which by this time covered the upper and nether sides of a thousand pages. The leader spoke:

"Oh prince, we have produced this great text for the people of thy realm. In it you will find the whole truth about economics, including 4,346 footnotes, 78 graphs, 43 appendices, and 27 exhibits."

The prince scowled. "Varlets," he cried (of course, he used the Persian word). "This is much too long. The truth is never so complicated as you have put it." And he ordered his guards to behead the senior economists among those who had prepared the report.

The surviving wise men returned to work and after one more week, they again approached the prince. This time they had condensed the work to a pocket-size guide. The leader spoke:

"Oh prince, may it please your sultanic grace, we have produced this indispensable handbook of economics, replete with index of subjects, in which the lowliest herdsman can find light on any subject, whether it be 'marginal utility,' 'logarithmic progression,' or

'the law of the adverse minimum.'"

The prince took the book, thumbed through its pages and flushed with rage. "Pashti," he roared (which is the Persian word for "scum"). "This is not the language by which to teach the people economics. Are there no men among you who have the common touch?" And he ordered all the wise men beheaded except two. To the two remaining economists, he said: "Retire unto your tents and work, each unto himself. At the end of the seventh day, bring me your results."

The men retired, and at the end of the seventh day, they reappeared to face the angry prince. The first wise man stepped forward. "All right," demanded the prince, "let me see your work," and the economist, who was a man of the people, presented a slender volume, filled with big letters and simple words, and printed on only one side of the page, and he said:

"This is the simplest text that can ever be presented to the people. It contains the truth, and nothing less would ever be sufficient." The prince looked pleased, and bethought himself of the prize that he would bestow on this wise man.

Suddenly his thoughts were broken by the strident voice of the second wise man, who said, "Attend, oh prince, to the wisest words of all," the prince looked, but could see no book. "Where," he asked, is your work? Let me see your scrolls."

"No, my liege," he said (speaking, of course, in Persian), "I demand that you behead this imposter economist, for I have the simplest truth of all."

"Let me see it," demanded the prince.

"I do not need to write it," said the economist.

"I can tell you in nine words. Listen, and I will speak the text by which all the people of this great realm shall learn the truth of economics." The prince listened and the man said:

"There is no such thing as a free lunch!"

Mrs. Jennie Neff of Ellington, Conn., is 90 years old, but still turns out beautifully patterned rugs for herself and her many relatives. Mrs. Neff owns a farm, and the house in which she lives is nearly 200 years old. The old rocker in which she is sitting is one of several chairs earned years ago by her mother and sisters picking berries and weaving.

Mrs. Neff lives near the church where a giant of a man used to preach "Hell and damnation" sermons, and she says he spit tobacco juice at intervals during his sermons. He had a tremendous voice and could be heard almost a mile away. Mrs. Neff's great-grandfather and 13 of his sons fought in the Revolutionary War.

St. Louis, Missouri

Is *this* what you want to leave to *your* children?

Of course not! But, while we are giving American lives and dollars to fight communism and state socialism in other nations, wouldn't it be tragic to lose **our own** freedoms here at home?

America has been good to us

All of us know what it means to live in a *good* America. It is a country where every youngster starts life with wide open opportunities before him. What he makes of them is up to *him*—not controlled by government orders.

We Americans are free to choose our line of work and to make as much money as we can. We are free to accumulate property, to invest or save our money as we choose.

Rights like these help make America

We worship as we prefer, we vote as we decide and we are free to speak our minds without fear. Our dignity as American citizens is respected by others, just as we respect *their* dignity, regardless of race, color, creed, or class. These precious freedoms are ours to enjoy—and *it is our responsibility to pass them along to our children just as they were passed along to us.*

There are forces at work in this country today which aim at taking away our individual rights and freedoms—robbing us of them slowly but surely, which means

robbing our children, too. There are prophets of something-for-nothing who shout "Share the wealth!"—when what they really mean is "*Give US the power and let us run things to suit ourselves!*"

They sneer at America's capitalistic system, but neglect to tell us that no other system in world history has ever furnished so many jobs, so many opportunities and such good living for so many millions of people. They like to have us forget that it was the capitalistic system—not *state socialism*—that built up the good America we know.

Will our children inherit a **GOOD** America?

Not unless we all realize and remember the things that make it good. Not unless we recognize that those who seek to socialize our country are *not* working for a better America, but for one where they can run things as they please—where you and yours will do as they tell you and nothing else.

Freedom is worth working for!

Remember the things that make America good to live in, good to work in and worth fighting for! If we let them slip away, they will be lost to our children, too. As good Americans, let us be ever vigilant to protect the heritage of freedom that is ours and theirs. **Unless we work for freedom, freedom will not work for us.**

~ FREEDOM ~ Is Your Business

By GARTH A. SHOEMAKER

Vice President Hygeia Refrigerating Company, Elmira, New York

FREEDOM of speech, freedom of religion, freedom of the press, and freedom of assembly are American rights. They are our heritage. We as Americans are not interested in freedom from anything. The much propagandized "Four Freedoms" of the Atlantic Charter have not, are not, and cannot be American. The connotation of "freedom from" anything implies security. Security is neither a God-given right, nor is it an American Inheritance. Security is slavery. Americans fought their first great battle against security back in those fateful days from 1774-1789. Our forefathers learned then that the responsibility of free government is the responsibility of civilization itself.

In February of 1787 (a year fully as important in our lives today as 1776 and without which neither Independence Day nor Thanksgiving would have any importance to us) the Congress passed and sent to all states a resolution asking for delegates to a Constitutional Convention to revise the Articles of Confederation. As a result, the Constitutional Convention met in Philadelphia from May 14 to September 17 in the year 1787. It was then that the liberties and freedoms were born which today we must struggle to retain.

Controls Lessen Freedom

I can hear some of you saying, "We haven't lost any of our freedoms. What is this guy talking about anyhow?"

Without attempting to decide the merits of the purposes for which these things were done, let me ask you these questions:

1. If you had a house for rent, could you bargain freely as to the price your tenant would pay?
2. Suppose you are an odd character who insists on your right to choose your own method of providing for your old age. Can you just tell Uncle Sam to stop deducting from your pay check?
3. When you pay off the mortgage on your property, can you then disclaim the mortgage placed on it by public authority through the great public debts that have been created?
4. We have price controls, wage controls, production controls, and back-breaking taxation to create and maintain waste and extravagance in government. Are not all these things a usurpation of individual freedom?

Now it is undoubtedly true that all these restrictions on freedom were probably created for laudable purposes, but first restrictions always are. It is the growing trend that disturbs me. It is this trend that makes me afraid and alarmed.

Here at the middle of this 20th century, it may be an opportune time for you and me and all Americans to check our assets and our liabilities. By one of those odd coincidences that occur so often in the affairs of mankind, the midpoint of this century is also a historical crossroads where decisions must be made by us which will give direction to the lives of generations yet unborn.

God grant that we may have the wisdom to make these decisions calmly and courageously, fully conscious of the great responsibility that is ours. With the rising clamor and welter of con-

fused and confusing ideas and propaganda which are being positively, skillfully and dominantly presented, it becomes more and more imperative that we understand the true significance of our American citizenship and the great American freedom upon which that citizenship is based.

Pause for a moment and think. Why aren't you afraid of the police? Over a large part of this weary and despondent planet, this very day the police inspire sheer terror because they represent the knock on the door in the middle of the night, when someone in a family, or perhaps an entire family, disappears and never is heard from again. That is not so in America. Why?

Why do you dare to criticize? The penalty for criticism of those in authority is death in many countries, and probably death after torture. But you may criticize any of our public servants from the highest to the lowest, and your only hazard is a libel suit if you fail to stay within the bounds of accuracy. Why should you have that privilege?

Why should we in America, who have only 7% of the earth's population, living on about 6% of its land area, have 85% of the world's automobiles, 54% of its telephones, 48% of its radios, 46% of its electric power, and 92% of its bathtubs. Why?

Can it be our superior natural resources which give us all this? There are other areas on the earth which have equal or even superior natural resources to ours. Some countries have materials we can't grow or mine from our soil. So that can't be the answer by itself.

Perhaps we are the master race—at long last the genuine superman? But we have no national blood. Our people came from all the lands of the earth and they brought with them just about as much good and as much bad as there is left in those who stayed at home. No, we are not supermen—just plain ordinary people.

Well, is it because we have a genius for choosing the right leadership, an infallible judgment of human nature which enables us to select thousands of public officials without ever making a mistake? On this it is perhaps better that I restrain my comments.

God is Supreme

In my humble opinion, this greatness came with the conviction that God is the master of man and, therefore, neither the state nor man himself can be master.

This freedom, with the conviction that God is the master of man, came to America with the Pilgrim Fathers and the William Tells of many nations and many lands, who found their homes here.

The First Amendment, the cornerstone of the Bill of Rights, says, in language that cannot be misunderstood: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or of the right of the people peaceably to assemble and to petition the government for a redress of grievances." Freedom of speech, freedom of religion, freedom of the press, freedom of assembly — not freedom from one darn thing, and certainly not freedom from our responsibility to work and, if needs be, fight to maintain those freedoms for ourselves and our children, as our forefathers worked and fought to gain them for us.

A Time of— DECISION

By ALLAN B. KLINE

President, American Farm Bureau Federation

THERE is no doubt that this is a time of decision in America. Freedom is challenged. The threat is two-fold. First, it is the threat of force. This is the military side and is in everyone's mind nowadays. Second, it

Allan B. Kline

is the struggle for men's minds. Here, too, freedom is challenged. Our philosophy is that the citizen is the most important thing of all. The other philosophy is that the individual matters but little. This struggle goes on behind the Iron Curtain, in the free countries of the world, and make no mistake, in the United States of America.

We have a priceless heritage. The key to it is freedom. On the record, it has paid off in a production per man which outstrips anything else anywhere, and even more importantly, in an alert, self-reliant American people.

A controlled economy is the opposite to the American way. It is clumsy, inefficient, and dangerous. Ours is the free-choice system. To be sure, there are a great many regulations, but there is still a very great deal of freedom. The individual does what he thinks best, gets what he can for what he does, and uses his own judgment about what to do with what he gets.

Inflation Threat

Inflation is a real threat to economic freedom. With the mounting cost of defense, one of our major jobs is to control inflation. We know how to do it. We must cut unessential government expenditures to the core. We must restrain credit, increase production, and we must pay the cost of additional defense with taxes.

Such an increase in taxes is dangerous too, but it is incomparably safer than the price ceiling and the political approach which gradually replaces a free-choice system with a coupon system—an opportunity and reward approach to production problems with vast government bureaucracy making decisions in place of and on behalf of the citizens.

Money or Coupons?

Instead of actually controlling inflation, widespread use of price controls invites inflation. By submerging the symptoms, the citizen is led to believe that the money he gets is honestly related to the controlled prices. This might well turn out to be the big lie of 1950 or of 1951. If we maintain an unbalanced federal budget and use price controls, the first thing we know, coupons will be valuable and money of little use.

In the present situation, our objectives are clear. We must be strong enough and wise enough to avoid the great military struggle, if possible. This is the best way to win. If the struggle proves unavoidable, we must win anyway. In either case, we want to come through with an American system intact—a system founded on the determination steadily to increase individual opportunity.

Our best hope of accomplishing these ends is to build on the firm foundation of our past successes. This is no time for us to exchange our free-choice system for the clumsy inefficiency of political decisions in economic matters. Certainly, it is no time to substitute a price system with a coupon system.

COOPERATION For a Brighter Farm Future . . .

League's Accurate Tests Result in Higher Butterfat Premiums for Members . . .

The Dairymen's League tops the list in accurate measurement of producers' butterfat, according to a limited study made by Dr. E. G. Misner, professor of farm management at Cornell University.

Milk of Dairy Herd Improvement Association members delivered to 25 plants owned by seven different handlers in Tompkins, Cortland, Onondaga and Madison counties was studied in monthly tests over a period of one year. The milk was first tested at the farm under Dairy Herd Improvement Association standards and the results of the farm tests were used to check the accuracy of the butterfat tests at the various milk receiving plants.

League Tests Virtually Agree With Farm Tests

Averaged for each of the 12 months, League plant results differed from the farm tests by only 1/100th of one percent, a difference so small that it was accepted as substantial agreement with the farm tests, particularly in view of the fact that butterfat is never so thoroughly mixed with milk as it is when it comes fresh from the cow. Non-League plants, on the other hand, showed a difference of 15/100ths of one percent below the farm tests.

League Accuracy Pays Off in Milk Checks

Although the study did not detail the actual monetary value of accurate testing to producers, League spokesmen estimate that the difference between League-plant testing and non-League-plant testing will yield about 6c per hundredweight more in butterfat premiums to League members than non-League producers receive.

League Constantly Checks the Accuracy of Its Tests

The League's policy has always required special efforts to insure highly accurate butterfat tests. Fifteen control laboratories located at convenient points throughout the milkshed constantly check the tests of the licensed testers in League plants, and League division superintendents maintain a close watch over all testing procedures. In addition, members are encouraged to call for the special tests made by the State whenever there is dissatisfaction with the butterfat basis for payment in milk checks. The League also offers its services to check the butterfat tests of buying dealers for members delivering to such dealers.

Bumper Crop of Box Cars

**...to move your crops to the
great markets and ports that
New York Central serves**

Since 1945, New York Central has invested more than \$232,000,000 in new freight cars. That's 50,742 new cars... over half of them box cars, stock cars, refrigerator cars to move *your* farm products promptly and safely to market.

That new car program... one of the largest in railroad history... is an important service to New York Central's agricultural shippers. But, in a broader sense, it is a vital contribution to the security and freedom of every American.

For it is the freight car... far more than any other transportation tool... that mobilizes America's productive might for prosperity in peace or strength in defense.

The Smooth Water Level Route

POLITICAL PIED PIPERS

By Clyde W. Fox

MOST of us are familiar with the story of the Pied Piper of Hamelin. When the citizens refused to pay him for piping the rats out of Hamelin, he began to play another tune on his pipes. It was a gay tune. It seemed to promise a Never Never Land of toys, candy, and continual play. And all of the children came out of their houses and followed him and were never seen again.

While most of us have heard this fable, how many of us realize that it developed from an actual incident in history? This incident was the Children's Crusade in 1212. And children left not only Hamelin but all the towns through which the crusade passed in Germany and France. They were led by a "Pied Piper" who said that only the innocents—the children—could free Jerusalem from the infidels.

Some of the people watched the procession as a spectacle. Others wept at the folly of it. A few tried to stop it at the risk of being killed as heretics. And as always, the evil opportunists went along with the good-intentioned but misinformed leaders.

Can you imagine the procession of thousands of starry-eyed children with their crosses and their songs? But the people who went along with them were not starry-eyed. They knew where they were going, for they saw possibilities.

The children finally reached the sea—all but a few of them who could not keep up. There were ships waiting to take them to the Holy Land, presumably. But the opportunists who had attached themselves to the crusade sold the children into slavery. And those children were never seen again.

Today's Tune

There is a present-day analogy. A "Pied Piper's" tune is being played throughout the land today. It seems to promise a Never Never Land of security and freedom from want—a Utopia for the believers, the innocents. It bids us to trust our leaders, and to have no fear. It is the tune of socialism.

There are many sincere people—both

Republicans and Democrats—who are joining this crusade. Most of them are as starry-eyed as children. Their intentions are good, but they are on their way to an impossible Utopia that disregards all the laws of nature and economics.

With these starry-eyed people, however, are going a lot of people who are not starry-eyed. They know where they are going. They are the socialists and communists who desire to plan the lives of other people. All of them see their power increased by encouraging and taking advantage of this crusade.

One by one, the banners of this modern crusade are unfurled. The slogans printed upon them are popular because they promise a Never Never Land of something for nothing: public housing, government education, socialized medicine, government-guaranteed jobs, price controls, government subsidies, government-guaranteed pensions, and so on, and so on.

Like the children of 1212, most Americans seem to be participating in a spectacle; they are merely following the good-intentioned but misinformed leaders who have promised to lead them into a Utopia. Many Americans wring their hands and weep—and do nothing more because "We can't stop the trend of the times." But a few Americans protest and try to stop it; they are the "heretics." They are those who distrust any person who wants power over others, however good his intentions.

— A. A. —

OLD COWS

The savings that could be made for dairymen if every dairy cow could be made to live and produce one more year are staggering. In 30 important New York State dairy counties, the total has been figured as 5 million dollars.

There is much yet to be learned about the longevity in cows, but it is generally agreed that heredity plays a big part and that sanitation and disease control are mighty important too.

SOME WANDERING THOUGHTS

MAYBE the whole idea is impossible, but what do you think of my wandering thoughts?

We all complain that the federal government is encroaching upon the authority of state and local governments and the rights of individuals. It takes unto itself more and more of the functions historically exercised by states and localities. Under the old way, "home government" was a blessing for the nation as a whole.

My thoughts went far off the beaten paths. Why should we not forbid the federal government to collect taxes? Let state and local governments collect all taxes, if needed. Then reverse the present trend by giving state grants to the federal government to cover expenses involved for its then *limited services*. Why federal "grants" to states and localities when the residents of the various states and localities furnish this money in the first place, and have to pay for the administration and handling of these funds which, if they come back at all, look awfully sick after deductions for "services rendered" by the federal government?

Then the federal government would have to submit its budgets to state legislatures where they could be scrutinized before acceptance. The people would thus have a broader picture of the cost of government. The centralization of power and even the "ism" of the "Welfare State" would be well on the way to elimination. Taxes, I am sure, could be cut to a fraction under such a change, putting the "bureaucrats" in Washington under the "dole" from the states. That would be the kind of "social security" we could stand. The power of the individual state and local governments, and through them, the power of the individual voters, could be re-established.

In 1916 Lenin advised Swiss workers that direct federal taxation would be an instrument through which Switzerland could be socialized. The same for the United States.—John.

EDITOR'S NOTE: John Unkel is one of the maintenance men at The Foundation For Economic Education, Inc., Irvington-on-Hudson, New York. He was born in Germany and traveled in many other countries before choosing American citizenship.

Like other members of The Foundation staff, he takes seriously this search for truth in economics, political science, and related subjects. His comments were left in a penciled note on the desk of another staff member.

Mr. & Mrs. York State Farmer:

*Tune in on
this profitable
listening*

Thousands of York State Farmers in from their fields for lunch have been profiting from Lee Hamrick's up-to-the-minute interviews with farmers, agricultural leaders and men who have proven ideas for making farming pay.

It's an informal lively half hour. It's easy profitable listening over your Rural Radio Network station each Tuesday, Wednesday and Thursday at 12:30 p.m.

It's brought to you by the railroads which serve you in New York.

The Railroads Which Serve You Mean These Things to You

We're One of Your Best Customers Our dining car services buy more than a quarter of a million dollars worth of your farm products each month. Add to this the steady buying of your farm products by 133,000 well-paid railroad families in New York, and you can see how much we railroads and railroaders mean to you as your customer.

We Pay Large Taxes to Your Community In many counties in New York railroad property tax payments are more than a third of all property taxes collected. In addition, railroad taxes to school districts pay for the education of 20,000 rural school children each year. We free and enterprising railroads are the only transportation system in New York paying all our own way, in addition to supporting your local government services with our taxes.

We have Served Your Transportation Needs For 120 Years Today there are more miles of railroad track in New York than the entire state highway system. This vital network serves you today, as it has for 120 years, with all-weather, low-cost transportation. And you pay for our service only when you use it, for our tracks, stations and equipment were built and maintained by us at no cost to you as a taxpayer.

FREEDOM ON THE MARCH IN ROCHESTER

on the 24th of February 1950, an informally organized group of about 150 persons from the Northeast met to express a common concern about the creeping decay in our free American way of life.

We bonded ourselves together then to check this decay and to stimulate a rebirth of appreciation for the spiritual values of a free society.

IF YOU BELIEVE WITH US

1. That every act of our government should be measured by whether or not it increases the area of freedom for a free people
2. That government subsidies and price support schemes restrict freedom, destroy liberty, and lead to national bankruptcy
3. That politicians who preach a policy of "something for nothing" are deceiving the voters and aiding the power-hungry planners of "creeping socialism"
4. That national prosperity and growth are a direct result of the incentives of economic freedom
5. That economic freedom means a free market and free competitive enterprise
6. That capital to be used for the tools of production in the future is the money we save today and that saving is a virtue whether done by you and me or by the government
7. That the rapid growth of the public debt causes dangerous inflation and is even worse than excessive taxation
8. That taxes to protect and extend our freedom are necessary and good, but that taxes for social plans and government economic projects are vicious and directly destructive of personal freedom
9. That all free men, farmers, union workers, professional men, business men, should join together for FREEDOM REFORM in government and in our whole outlook on life

THEN NOW IS THE TIME TO JOIN WITH US
TO DO SOMETHING ABOUT IT!

Freedom on the March IS doing something about it! We help clubs and civic groups by supplying speakers, ideas, literature, forum plans, education plans, movies, etc., without charge. We have helped community Freedom Clubs to get started and are constantly searching for new ways to stimulate FREEDOM REFORM. We can help you when YOU decide to

DO SOMETHING ABOUT IT!

A contribution to Freedom on the March is an investment in your own free future.

FREEDOM ON THE MARCH

"Little" Business Is "Big" Business

By CLAUDE A. PUTNAM

President, National Association of Manufacturers
and President, Markem Machine Co., Keene, N. H.

ABRAHAM LINCOLN is credited with saying, "You can fool some of the people some of the time, some of the people all of the time, but you can't fool all of the people all of the time."

The fact that you can fool some people some of the time and some all of the time was the number "one" tool in the propaganda kits of Hitler and Mussolini. It is now the master weapon of the Kremlin—the "Big Lie" told often to confuse, mislead and ultimately, unless it is refuted by fact or smashed by force, bring whole peoples to ruin.

Claude A. Putnam

Right here at home, political demagogues, professional business baiters and our home-grown collectivists are using the "Big Lie." There is an attack upon our whole economic system which they would destroy by dividing it into "big business" and "little business"—whose interests, they say, are diametrically opposed.

"Big business" is pictured as a monstrous ogre, seeking to dominate the political life of the country and bent upon destroying or swallowing up so-called "little business." This fantastic and meant-to-be frightening nightmare is conjured up by the "big liars" out of a statistic conceived by some bureaucratic theorist who defined a "little business" as a company employing fewer than 500 persons.

This country is facing the greatest crisis in its whole 175 years. The future of every American—man, woman and child—is at stake. The freedom of unborn generations is in the balance.

In such a time, those who would create disunity and friction on the home front are traitors—as guilty of treason as though they had taken "thirty pieces of silver" from the enemy.

The National Association of Manufacturers has something more than 15,000 members, and 83 per cent of them employ fewer than 500 persons each. According to the statistician,

then, NAM should be "little business." But even more interesting is the fact that 47 per cent of the Association's membership employ fewer than 100 people and 28 per cent fewer than 50.

We in NAM don't believe there are such things as "big" and "little" business. The American industrial machine comprises about 4 million individual businesses—of one size or another—interdependent as units in the greatest productive system history has ever known. That interdependence is dramatized most vividly in times such as these when national defense needs throw the great machine into maximum production gear.

Necessarily it takes a "big" company to produce swarms of aircraft, hordes of tanks, fleets of ships, guns and the other paraphernalia of war. But hundreds of thousands of smaller companies must produce component parts before a big company can deliver an airplane or launch a ship. Whose role is most important? Which shot wins a war?

Where do these outcries about business "bigness" and "badness" come from? The answer is that this whole campaign against business bigness and business success has its origin and its inspiration in a little group of fake Americans who want to weaken and eventually to destroy the American way of life.

They pretend to be bleeding with sympathy for the small business man—and they propose to help him by wrecking our economy!

They cry out that business size and business success are enemies of the people, and they propose to help the people by destroying the system that has given the American people the highest standard of living the world has ever known.

They are against business bigness because it is evidence of productive efficiency and economical operation which government cannot hope to emulate but which government can destroy if the people permit.

In short, all these attacks on business bigness are a part of the worldwide war on capitalism, and those who today condemn American business for having expanded would today be the first ones to attack business if it had refused or failed to grow to meet the new demands made upon it by an expanding population.

As a matter of fact, those who attack American business for having grown are in effect condemning American business for having provided new and better opportunities for a labor force that has steadily increased over the years...

Let us unite to protect the legitimate functions of all business—the function to grow, to produce at maximum efficiency, to profit reasonably, and thus to serve our country best.

Let's Do it Together

By EARL D. MERRILL

Director Agricultural Extension Bureau, Republic Steel Corporation

WE ARE all in it together" was the theme of a compelling address by Allan Kline, president of the American Farm Bureau Federation, before the Cleveland Farmers' Club Annual Awards Dinner in November. This should be the rallying cry wherever farmers and leaders in business and industry get together.

When I left a New York farm a year ago to join the Republic Steel Corporation to interpret agriculture to them and them to farmers, I did not realize how closely the economy of the two groups was interrelated. I was happily surprised to learn that the top people in industry were ready—yes anxious—to join hands with farmers in strengthening their common economic system.

Sound Thinking

An indication of the awareness of farm thinking is shown in a talk by T. M. Girdler, Chairman of the Board of Republic Steel Corporation, before one of the forums of leaders of agriculture and Republic executives, Mr. Girdler said:

"I am impressed by the basic soundness and good sense that is developing in agriculture. I have seen a marked change in farmers' thinking in the past twelve months. Farmers are trying to find the solution to their production and marketing problems without relying on federal appropriations. They are revolting against the controls that must accompany too high levels of support. They do not believe in public spending beyond national income. Farmers are recognizing that they cannot prosper under a socialistic program based on mortgaging the future. They feel strongly that they are still competent to plan national farm policy."

These two great segments of our national economy—farming and industry have the same fundamental objectives. Both are products of the system of free, private, competitive enterprise that has created the highest standard of living in the world and the greatest opportunity for the individual. Under this free American system we have achieved the widest and most equitable distribution of the fruits of our highly efficient production. Workers share in the contributions that they make to increase productivity or reduce costs. Within this system are the seeds of continuing expansion, of further increases in productivity per man and of higher real wages per worker. Americans, as expressed in many ways November 7, endorse this dynamic, free way of doing things.

More Food for Less Work

The same factors that have fostered our productive expanding industry have produced similar gains on America's farms. In 1850 one farm worker produced enough food and fiber for four others. Now one farm worker supplies the needs of 14 others. While agriculture has done much on its own, industry has made a substantial contribution to this remarkable achievement. It is important to industry and particularly to all non-farm workers that farmers are producing more and better food products with less and less labor. As time goes on a declining portion of the worker's wage is going for groceries.

This close interdependence of farm and factory does not stop with economic relationships. Both thrive or wither in the same political and ideological climates. Whatever hurts one weakens the other. National policies

and programs under which one can grow in strength and efficiency are equally the concern of the other. Farmers and other business men are each minority groups. They are natural allies in working for greater economic stability and for the preservation of the free choice system of private competitive enterprise in our country.

Dean William I. Myers of the New York State College of Agriculture pointed out the significance of this in a recent address when he said: "The six million self-employed farmers—each part capitalist and part worker—are the most important single group in maintaining freedom and private competitive enterprise."

Inflation Dangerous

Both farmer and city business man suffer from unsound and inefficient government. Both want a balanced national budget and sound fiscal policies. The fast growing army of non-productive public employees serve the interests of neither. Continuing inflation spells danger to each. The concept that government can wisely distribute the nation's wealth; that it can plan, direct and control the economic life of farm and industry is not acceptable to either. Thinking people in each group recognize that we have taken many steps toward Socialism in this country and that political and government planners have blueprinted programs which, if adopted, would probably take us to the point of no return.

In World War II under the belief that we were meeting the needs of a temporary emergency, we willingly surrendered liberties and accepted government control and direction of our economy. Some of this loss of freedom has carried over into a peacetime economy. We must realize that the struggle ahead between Communism and the free way of life will be a prolonged conflict of uncertain duration. This time we cannot risk turning over too much of our lives and resources to government administration. If we do, we may find that we have lost the very thing we are fighting to keep. Freedom and security go together. For a long pull price controls, restrictions, quotas, licenses, permits and ever-present bureaucratic red tape would severely hamper and discourage the needed all out production of farm and factory. This is another risk that we must not take.

With the problems of inflation, the trends toward Socialism, expansion and inefficiency in government, with all that farmers and people in industry have in common and at stake there is ample reason for each group seeking every avenue for understanding the other fellow's problems. But with the critical world situation facing America, with the fight not only to preserve our freedoms and way of life, it is doubly important that these two groups, which have contributed so much to make America strong and productive, forget any imagined or real differences separating them and pool their thinking, their leadership and their resources in the common cause. Much teamwork on the home front was in evidence in the last war—more is needed in the critical days ahead. Leaders in each group must join in constructive thinking, planning and action, both in government and outside.

"What FREEDOM Means to Me"

FIRST PRIZE

By EARL SMITH

R.D. 2, Syracuse, N. Y. Age 19

OUR freedom is based primarily on the first ten amendments to the Constitution known as the Bill of Rights. They are founded on the religious conviction that every human life is sacred. They assure freedom, and release the creative powers of man. But to my way of thinking we have over-emphasized rights in this freedom that we cherish, and have let duty and responsibility fly out the window.

Education has not been faultless in the overemphasis of rights. We have taught our children that they are surrounded with rights: the right to an education, the right to individual activity, the right of free speech, and all other rights of modern society. America, the "land of freedom" has been described as a "land of rights." One must recognize rights of others, but the overemphasis of rights tends to bring strife and conflict.

We have claimed the rights of labor, forgetting to analyze the duties and obligations of both capital and labor. While we protested the sacredness of human right to food, clothing, shelter, religion, culture, etc., we have overlooked the mutual obligations. In short, we have told men what they should HAVE, but not what they should DO.

The minimum obligations of mankind in a free country are:

1. To respect the rights of others as we claim them for ourselves.
2. To bear the responsibility of rights, the grateful and productive use of rights possessed.
3. To seek the complete realization of our ideal and best selves.

Freedom gives us the choice of claiming our own rights or doing their respective duties. By accepting duty, one realizes the happiness and usefulness of the performance of duties, for no person can get along profitably in a society whose rights he has disregarded. But one whose freedom to choose between right and duty is exercised by love—a love of others whose rights he respects—such a one has fulfilled the law of responsibility. Freedom opens the door for the rejection of duty or for the performance of your obligations.

So, we as freedom-loving people of this land all face the duty of spreading brotherhood from sea to sea. We may perform or reject this duty. We would remember those who gave their lives that freedom still might reign. We thank them who died for liberty. They died for liberty, and we—do we walk in their procession? Do we seek freedom for all men or do we seek our own gain? Have we forgotten why they died? Well, they died that justice and goodwill might rule. They died so that Mother could take her family to church on Sunday morning; they died so that you could work at the job you

liked; they died so that two lovers could walk down the road; they died so that father could go home to his welcoming family.

As you should readily see, the spirit of freedom is not in laws or institutions, it's the simple things of life—love, work, sacrifice, play—these are the things that count. Sometimes they have had to be fought for, but first they have to be lived for. It is our duty to see that the "government of the people, by the people, for the people, shall not perish from the earth."

SECOND PRIZE

By SANDRA ARMSTRONG

Afton, N. Y. Grade 11

FREEDOM! It is not a very long word nor does the sound of the word seem very significant, but behind this one word is something much bigger and stronger.

What is Freedom? Is it the Flag floating majestically in the breeze? Is it the Statue of Liberty which guards New York Harbor? Is it the right to say and print what you think and wish? Maybe to some it means the right to worship as one pleases. Yes, people give various definitions of Freedom. To most it means one or two of the above things and there it stops. Most people, as a general rule, take their Freedom for granted.

To me, Freedom is not just one of these things, even though each is important for Freedom. Freedom is not one thing, nor two, nor even a dozen. It is a million things combined as the pieces in a puzzle, each fitting into its own special place and together all these things make Freedom.

Freedom to me is the gallant spirit of our forefathers who founded this great nation; it is the struggle for free-

dom for the Negro; it is a group of children laughing and playing in some school yard; it is people, rich and poor, attending either a small, white church in a small town or a large majestic church in a large city, the church of their choice, and it is the struggle and labor of the working man or the farmer in the field.

Freedom is everything that means happiness, liberty, and success. Freedom extends as far as the people will let it. The best example of Freedom to me is a happy home filled with the gay, carefree laughter of children and the warm, friendly atmosphere which surrounds all. It also is the small and large businesses in every town and city, and it is the school, one of the most important factors in every community.

Freedom is what we, the people, make it. It is the Brotherhood of man and the friendliness and helpfulness of each person to their fellowmen. We look at the Flag floating proudly over the green and golden countryside. We see the golden sun coming up over a little white church. Yes, this is Freedom to me.

THIRD PRIZE

By Carol Hammon

Locke, N. Y. Age 18

FREEDOM means everything to me." That was the simple, truthful answer given to me by the first person whom I asked, "What does freedom mean to you?" and I agree. The answer to that question is so vast as to make it almost unanswerable. One person might say, "I am free to think, live, and worship how, when, and where I please," or another could say, "I am able to choose my vocation, to change it, to build a business of my own, or to work for someone else, as best suits

my needs and abilities." Still another person might think of his ability to vote and to choose the form of government he wishes.

Freedom means all these things to me, and many more. However, I believe that freedom can be likened to a rubber band. It can be stretched just so far, and then—suddenly, it is no good. Perhaps it can be patched up again, perhaps not. Breaking a traffic law is a simple example of this. Anyone is free to drive his car as he pleases until he injures his freedom by endangering someone else. Then the offender is punished, which inevitably means loss of freedom in some way.

A more serious instance is the case of a traitor to his country. He, like all free Americans, is allowed to come and go as he wishes. He may believe, and to a certain extent practice beliefs contrary to those of other Americans. But when he endangers our freedom by betrayal of state secrets, or by other means, he is deprived of his freedom.

There is another extreme to which we can put this rubber band called "Freedom." We can lay it away in an envelope marked "Security," and, if it is left there for too long, it will rot away its usefulness.

A little security is a wonderful thing, but a little should go a long way. A small amount is sufficient to aid us in using our rights of freedom. Of course one should have a good home, sufficient income, etc. to live in freedom. But these things are obtainable to those who work for them. When we try artificially to control and stabilize the natural fluctuations which form the basis of our economy, both private and national, we are only entwining ourselves in our own trap, and we may be sure that an essential part of our freedom will be lost before we are able to extricate ourselves.

So, this rubber band must not be stretched too far. I, as an American citizen, should learn to maintain the correct "stretch" between absolute freedom and absolute security. For, as I have said, freedom means everything to me, and I would sorely hate to lose even a small part of it.

OTHER COMMENTS

The response to our contest was astonishing in its volume and most of the letters were excellent. We would like to give you a few of the very nice statements made in some of the letters which failed to win a prize.

Bessie Zerbinopoulos of Union, N. H., 15 years old says: "We young people want to live in this grand and glorious land in peace with the world. But don't get us wrong! If we have to, we will shoulder arms to preserve this peace. We realize that there are those who are anxious to take away these freedoms which make this country the grandest place on earth in which to live."

Kathleen Murray of Burdette, N. Y.,

CONGRESSMEN Want Letters

MANY times we have heard friends say that it is useless to write or wire senators or congressmen because obviously it would be impossible for them to read all the mail they received.

To get the true picture we wrote several northeastern senators and congressmen and asked them whether they wish for letters and telegrams and what kind get the most attention.

Without exception, the legislators to whom we wrote replied that they wanted and valued telegrams and letters. Here are some excerpts from their replies:

Senator Herbert Lehman says, "Congressmen do wish to get letters and telegrams, providing they come from responsible organizations and individuals. Some letters and telegrams have very little effect since they frequently indicate a well-organized movement by pressure groups.

"In addition to letters and telegrams, press reports indicating the views and wishes of the citizens of the state on any matter affecting the public interest carries much weight with conscientious members of Congress. They should, however, be as little political or partisan as possible."

Congressman Sterling Cole, after stating that members of Congress welcome letters and telegrams, says, "A personal telegram is probably the most effective, although a letter with supporting arguments is equally persuasive. Petitions, form letters and the like are not given much consideration. Penny postcards can carry a persuasive message."

Senator George Aiken of Vermont makes these comments:

"Yes, members of Congress do like to hear from the folks at home on proposed legislation. In the final analysis, however, a member of Congress has to vote according to his own opinion because he may have knowledge of facts with which his constituents are not familiar. Much of the important information on which votes are based is not made available or publicized to the folks back home.

"A large number of letters which have obviously been sent in by request receive considerably less consideration than a single letter which expresses the personal and unprejudiced opinion of the writer. Block telegrams and petitions also carry less weight than letters written by individuals. Telegrams do not carry more weight than letters."

Congressman Clarence Kilburn agrees with others that a personal letter rather than a signed form letter is most effective. He goes on to say, "Any member of Congress, I think, is anxious to hear from well-informed constituents on pending legislation. I know I am. However, many times constituents write me, and obviously from their letters they don't know what the legislation contains or what it means. In some of these cases, when I have been home and asked why they wrote as they did, they have said, 'Well, somebody asked me to. I really don't care; you do as you think best.' However, there are many well-informed people in every District who study pending legislation, become well-informed, and their judgment on it I find most valuable."

Senator Margaret Chase Smith of Maine replies briefly but to the point. She says, "Yes, senators and representatives do want letters, and the one that gets the most attention is the courteous communication that requests consideration instead of making demands."

Congressman John Taber comments

as follows:

"Personally, I like to receive the views of my constituents. I like it especially when the letter or telegram indicates that they know something about the piece of legislation that they are writing about.

"It would be a grand thing if voters could indicate their interest in economy in Government, but it is very difficult to bring this about."

— A. A. —

"WHAT FREEDOM MEANS TO ME"

(Continued from Opposite Page)

says: "Team work is the backbone of a democracy and as long as we and our neighbors walk hand in hand, there will be peace on earth and goodwill toward men."

Lorraine Le Feber of Rockland High

School says: "We have many ideals such as economic justice, freedom of worship, freedom of speech or the press, the right to assemble peaceably, and the freedom of petitioning our government. These ideals are not always followed exactly, but we do have a firm foundation on which to build."

Martin Decker, Grade 11 of Afton, N. Y., says: "We have many freedoms but in order to keep them we must be alert and wide awake to our duties as citizens of such a great democracy or our government will become corrupt and dictatorial."

Inez Feldman, West Valley, N. Y., says: "Many people feel that if they have security, freedom is unimportant. How wrong these people are! If we do not have freedom how can we possibly hope to have real security?"

Olga Rundall, age 16 of Millerton,

N. Y., says: "Our government cannot insure all our freedom without making adequate provisions to guarantee our security. The recent passage of the Anti-Subversive Bill has caused much controversy because it requires subversives to register with the government. I do not think this requirement is removing our freedom; it is insuring both our freedom and security."

Marian Hine, age 15 of Afton, N. Y., says: "Freedom is the right and power to change what we do not think is right or good. Freedom is a million little things. It is changing, intangible, with a different meaning for every person in the world. Freedom is America!"

Virginia Sprague of Rockland, Mass. adds a facetious note: "A man is free to marry a girl who is willing, but his freedom disappears when she says 'yes.'"

YOU'LL LIKE THESE MODERN GENERAL-PURPOSE TRACTORS . . .

*they have so many
features you want*

When you buy a John Deere "M" or "MT" Tractor, you buy a *complete* tractor, not one that must be fitted with a lot of costly extras before it is ready for work. Touch-o-matic hydraulic control, 4-speed transmission, self-starter, power take-off, individual rear-wheel brakes for short turns, adjustable air-cushion seat, and adjustable steering wheel—all these are yours in the original price. And, of course, you get all the advantages of simple, dependable, economical 2-cylinder engine design. Talk with your John Deere dealer for full details. Write for free literature on these tractors that are built for farms up to 100 acres.

MODEL "M" . . . The handy 1-2-plow general-purpose tractor of standard-tread design.

MODEL "MT" . . . The tricycle-type general-purpose tractor that plants and cultivates 2 rows.

Big-tractor work capacity with light-tractor economy is yours when you own a John Deere "MT" Tractor shown here with 2-Row Cultivator. Cultivator is one of more than 30 Quik-Tatch working tools built for use with these tractors.

JOHN DEERE

Moline  Illinois

A general view of the McCarthy barn from the road. There is another silo on the opposite side of the building. The main part of the barn is 36' wide and 126' long.

"It Cost More - But It's Worth It!"

JUST outside the village of Cherry Valley in central New York you will find 600 acres being farmed by Thomas McCarthy and his two sons, Bill and Jim. On this acreage, which is really two farms, 150 cows and heifers are kept, 80 of which are milkers. Mr. McCarthy says that he doesn't try to do much work these days. He owns the

McCarthy says that the system works perfectly, that no dampness has been encountered during the two winters it has been used.

Anyone who knows barns can see at a glance that it is solidly built. The contractor was Daniel Hope of Tribes Hill, but Bill and Jim, as well as two hired men, helped to build it—in fact they said that was the only basis on which they could get Mr. Hope to agree to take the job.

All the lumber was purchased. The rafters, which are the self-supporting type, were built on the farm. In addition to nails there are 22 bolts in each rafter. In the stable, all stalls are 4 feet wide. On one side of the barn all stalls are 5' 4" long, but on the other side they vary from 5' 4" to 4' 8" to take care of different sized cows.

"Since the barn has been in use," says Jim, "only two teats have been stepped on, but in the old barn we had plenty of trouble."

Hay on this farm is baled and the storage space above the stable will hold as much as 200 tons. Baled hay is heavy, but the barn was built to hold bales to the roof. Joists are 2" x 10", spaced 1 foot apart, and steel posts are located between each two cows making them 8 feet apart. The hay is brought down to the cows through three chutes on each side. During the coming winter a feed room will be

built at one side of the driveway upstairs with chutes leading to the stable below.

This is distinctly a family farm well-operated along modern lines, but with a liberal mixture of such old-fashioned virtues as hard work, common sense, and thrift. One of Bill's boys studies vocation-

Thomas McCarthy of Cherry Valley, N. Y., standing by one of the fans which ventilates the dairy stable. The fan is turned on by a switch, but when the temperature drops to the desired point, it shuts off automatically.

farm, the boys work it on shares, and each of the three partners gets one-third of the proceeds.

But this story primarily concerns the barn which the McCarthys built two years ago. While most of the old barn was moved to make room for the new one, one part 40 feet x 34 feet was left and is now a part of the new barn. The new part is 36 feet wide and 126 feet long.

It is a conventional type barn with a gutter cleaner to ease up on that part of the daily chores. Ventilation is provided by three electrically operated fans which turn off automatically when the temperature drops sufficiently low. Intakes are located along the wall in front of the cows, and Mr.

A general view showing most of the stable in the McCarthy barn. Platforms are roomy, gutters are cleaned by automatic cleaner, water bowls are always full so that cows can drink at will, and air is furnished through a forced draft ventilation system.

The gutter in the McCarthy barn is automatically cleaned by a gutter cleaner which dumps the manure in the spreader.

Jim McCarthy standing by the watering trough in the barnyard. The water, which also supplies the drinking cups in the barn, comes by gravity from a spring back on the hill.

al agriculture at the high school and Jim had a year or two when the department was first started.

I asked the boys why they didn't build a pen stable and they gave me two good reasons. Jim remarked that more bedding would be needed, which they didn't have. He added, "However, we have kept some heifers the pen stable way." Then Bill added a comment to the effect that they felt they could take care of the cows faster, and by giving them individual attention could get more milk per cow.

The boys and their father sell some young stock. For example, in the recent County Holstein Sale they consigned 2 calves, 2 heifers and 2 cows. It is the boys' opinion that cows can be shown to a little more advantage in stanchions.

To my comment that the barn must have cost more than if it had been built the pen stable way, the boys agreed, but in the same breath they both said, "But it's worth it!"—H.L.C.

Bill McCarthy in the milk house. There is a similar milk cooler at the opposite end of the building.

A Better Future for All Dairymen!

BETTER milk prices for dairymen, a fair and orderly system of pricing and marketing milk, these have been the major goals of the Metropolitan Cooperative Milk Producers' Bargaining Agency, Inc. In 13 years of working together cooperatively, dairymen and their 55 Bargaining Agency member organizations have proved the value of those goals in dollars and cents benefits to **all** dairymen producing milk for the Metropolitan New York market.

NOW a third goal has been added: that of meeting the competition of other foods by a farmer participation milk advertising program. As a service to dairymen, the Bargaining Agency gives this space to Milk for Health, Inc. for a progress report:

What:

Milk For Health, Inc. is a membership corporation of nine farm organizations. It is completely owned and controlled by farmers. Its only purpose is to assemble funds from participating dairymen for American Dairy Association and National Dairy Council advertising programs.

Milk For Health, Inc. has committees of dairy farmers in 38 dairy counties. It has the pledged support of 31 thousand farmers who ship through 374 plants to New York City and 11 thousand who ship to upstate markets. Twenty-eight cooperatives in the New York market have signed blanket agreements for their members.

Dairymen participating in the Milk For Health program pledge one per cent per hundredweight of the milk they produce to be used five-twelfths by the American Dairy Association for fluid milk advertising and research, and seven-twelfths to be matched by dealers for a National Dairy Council advertising program in the farmers' milk market.

Why:

(1) Farmers want to, and must, produce more milk. As a result, fluid production in the New York City milkshed has gone up 15 percent in five years.

(2) Fluid consumption per capita has gone down 11 percent in five years. Obviously, people could drink more milk now if they were properly informed.

(3) People just do not fully understand the food values of fluid milk. A recent study of consumption of fluid milk in a large Eastern city, showed that 45 percent of the native white adults never drank milk, 18 percent of the 13 to 18 year group never drank milk, and 12 percent of the native whites under 13 years of age drank no

milk. Fluid milk consumption is known to vary with income, age, sex, nationality, education level, seasons, and day of the week. Fluid cream is even more responsive to these factors. It is possible to improve the demand of the lowest group in each case without lowering the highs. There is a real likelihood of changing housewives' want for, and willingness to buy, fluid milk.

(4) Competition is increasing from other products for the increasing number of dollars housewives have to spend. Dairymen and dealers must help tell the story of fluid milk effectively, or lose ground to other goods and foods.

(5) American Dairy Association and National Dairy Council advertising programs have been tried and proved by 11 and 36 years of operation, respectively. There has never been a case where an American Dairy Association state organization has ceased operations. There have been dairy council programs in continuous operation in large markets for more than 25 years.

(6) The New York pool price increases five cents per hundredweight for each one percent increase in utilization as fluid. Therefore, if Milk For Health, Inc. can increase the percentage of all milk marketed that is used as fluid by one-fifth of one percent in New York City, it will have paid for itself.

When:

Collections for New York City will not start until at least 70 percent of the dairymen who ship to New York have pledged to participate by individual or cooperative agreements.

The yearly budgets for advertising fluid milk in the New York market as a result of Milk For Health, Inc. will approximate:

American Dairy Association of New York	\$190,000
National Dairy Council of New York, Inc.	
Farm money	250,000
Dealer money	250,000

Information:

Ask your county agent, home bureau agent, state agricultural college, local grange master, G. L. F. store, or the Milk For Health, Inc. plant committeemen who ship to the same milk plant that you do, to tell you more of the story. Or better yet, mail the coupon for a personal call by your nearest Milk For Health representative.

Tear Off and Mail This Coupon Today.

Says "CUSH" MURRAY
of South Lansing, N. Y.:

"No acrobat has anything on me," says dairy farmer "Cush" Murray of South Lansing, New York. "I save myself many a bad fall by feeding supplements regularly. I began by feeding Kow-Kare at calving time with excellent results. When two of my cows were falling off in production I fed them Kow-Kare and molasses. They snapped back to their usual pace in a few days. Since that time I have been feeding Kow-Kare and molasses regularly to every producing cow in my herd. I feel that this practice has certainly paid off in dollars and cents in maintaining high herd production."

THIS YEAR in dairying is the year to win by smart feeding practices. Milk market uncertainties plus the assurance that feed costs will be high put a premium on playing up cow health,

THE TWO ¢ -A-DAY
Build-Up

NEW! 50-POUND ECONOMY SIZE

playing down costly breakdowns. Thousands of feeders have found the answer, just as "CUSH" MURRAY did, in the supplementary feeding of Kow-Kare, the time-tested tonic-conditioner.

At a cost of less than 2¢-a-day per cow the digestive and assimilative organs can have the supporting stimulus of the Drugs, Iron, Iodine, Calcium, Phosphorus and Vitamin D in Kow-Kare. Heavy feeding, even "forcing" is safer if hard-worked organs receive the health-promoting help of this concentrated build-up. Kow-Kare in small and medium sizes, and in 50-lb. Drums brings this low-cost aid to dairies of all sizes, whether for general supplementation or for individual build-ups.

Cows at freshening time, before and after, have a special need for medicinal aid to meet the strains of their DANGER MONTH. Most cow owners call this use a "must" for safe dairy procedure. Your farm-supply dealer has Kow-Kare in any desired size.

FREE COW BOOK—A recognized dairy nutritionist has written a sensible, down-to-earth commentary on cow disorders, dairy feeding practices, with regional feed-and-roughage programs for your guidance. Ask for it.

When writing to advertisers be sure to mention AMERICAN AGRICULTURIST.

"I can't afford to have my horse laid up"

says Norwood Andrews
of Moorestown, N. J.

"Whenever I see any signs of lameness on my horses, I use Absorbine for relief. I'm sure it saved me many working hours in the past 10 years."

There's nothing like Absorbine for lameness due to strains, puffs, bruises. It's not a "cure-all," but a time-proved help in relieving fresh bog spavin, windgall and similar congestive troubles.

A stand-by for over 50 years, it's used by many leading veterinarians. Will not blister or remove hair. Only \$2.50 at all druggists.
W. F. Young, Inc., Springfield, Mass.

ABSORBINE

Farmers Recognize Socialism —AND DO NOT LIKE IT!

IF THE replies to some questions sent at random to a group of American Agriculturist readers are typical, farmers without exception believe this country is drifting into socialism and that the trend is bad. One reader puts it this way: "We are being very cleverly steered into socialism."

One of the questions asked was: "What can be done by individual citizens to reverse the trend?"

Here are some of the answers:

Joe Bolich of Ashland, Pa.: "The people should be made to realize how badly our political machinery has been infiltrated by socialists."

Walter Wilson of Gasport, N. Y.: "Learn to get along with less government help. Voice our disapproval when legislation involving government support and spending is passed."

Albert Gurney of Unadilla, N. Y.: "I think that 'greed' is the greatest cause of our trouble. We should try to get over that and demand more efficient government."

Local Control Best

Ernest Witter of Cuba, N. Y.: "Get control out of Washington back into the hands of local people and states."

Charles Rogers of Randolph, N. Y.: "The political philosophy of a nation is, in the long pull, a direct product of its educational system. Major changes in political philosophy are not handed down from above, but rise from the masses; and the thinking of masses in the modern world is largely dependent upon their educational experiences. A system of education which trains the child to think independently, clearly, and logically, and thoroughly acquaints him with the history of the human race is the greatest asset that a democratic society can possess."

City consumers and the city press have much to say to the effect that farmers are special wards of the government, so the next question we asked was: "Are you willing to see all special farm legislation such as price supports and conservation payments discontinued?"

An especially interesting comment came from C. H. Vance of St. Johnsbury, Vt., who said, "Yes, price supports cause oversupply and waste, and more and more people think farmers are getting big help."

Here again the answer was unanimously "yes" except that a few put in a qualifying statement, for example, "Yes, if all branches of our society do the same." "Yes, if we could get 100 per cent elimination of controls." "Yes, providing other industries and groups are treated likewise."

Just one answer did not give a definite "yes" or "no." The writer stated, "This is a question I do not know how to answer."

Buying Votes

Next on the list of questions was this: "To what extent are votes influenced by promises by political parties of more government help and benefits?" The answer to this question was an interesting mixture. Approximately one-half replied that such promises do influence elections, some of the comments being: "to a large extent," "75 per cent," "to a great extent judging from elections," "to a large degree. Most people don't stop to realize that they themselves are paying for government help."

Another group took the question personally and made such comments as these: "They promise too much and give nothing." "Such promises mean nothing to me. I would like to see less government." "Not much in New England, but I expect plenty in the West." "I think that many are influenced, but I am not influenced that way."

Only one reader stated a definite belief that such promises do not influence the voter.

Finally we inquired: "In your opinion could a party win a national election by promising strict economy, reduction of government controls and services, and balancing the budget?"

Here again some very interesting answers resulted:

James H. Stone of Marcellus, N. Y., says: "I often have my doubts that a party could win by promising strict economy. Voters have been taught so long—since '32—that all they had to do was to get hold of a good governmental teat and hang on, they may never let go."

Irving Austin of Medina, N. Y.: "I don't know, but I would like to see it that way."

Ralph Culver of Laceyville, Pa.: "Yes, if they would spell it out."

Only two others gave a definite "yes" to the question. Some made such comments as these: "I am afraid not." "No, I wish they could." "No, not yet." "Not unless a lot of people get back to the good old Yankee ideas of living." "Not until the political philosophy of the electorate is changed."

Self-Help Best

A number of readers took time to add comments to their answers. Again quoting Ralph Culver, "Votes are gathered by the presentation of a program that creates faith in the future. Promises of help can be nullified by definite plans for self-help. Know yourself; control yourself, and give yourself to the fundamentals of democracy—a practice of the Golden Rule. This can be brought about by prescribing courses for schools, churches, and all chartered organizations in the land that reach the 'grass roots.'"

Keith Tyler of Gouverneur, N. Y., makes this comment: "I am only 24 years of age but already I have seen many undesirable changes take place in this country. There is altogether too much unnecessary spending by our government. This country needs to revert to good old independent Yankee ways and ideas—less taxation; do more for yourself and look to the government for less help instead of more."

"I can save for my own old age or sickness or can at least provide for it with insurance. If they would economize all through the government, I'd gladly do without my A.A.A. lime, superphosphate, etc. because what I now get is only a drop in the bucket compared with what I buy and use yearly. A good farmer will buy and use them anyway, and the poor ones don't make use of their opportunities through A.A.A. now."

Royal Smith of Laconia, N. H., says: "I think a voluntary organization of citizens who believe in our American system should be started to talk and fight for what we believe in."

EDITOR'S NOTE: In some areas this is being done. For example, there is the Freedom on the March organization which you will find explained in this issue.

Why SOCIALISM Will Not Work

By Hugh Cosline

SOcialism is not a new, idealistic scheme for curing the world's ills. Many variations of it have been tried in many countries, and from the standpoint of the average citizen it has always failed. Here are some of the reasons for that failure:

INCENTIVE KILLED: Socialism promises security without effort; the slothful are not penalized but share the efforts of men who are ambitious and thrifty.

Government taxes grow, and soon the individual or business finds that increased efficiency or expansion has no value because the results of that efficiency or expansion are taken in the form of taxes. As a result, the standard of living of a socialist country gradually drops, instead of growing as it did in this country under free enterprise. The final end is "statism," where the individual works for the state rather than the state working for all individuals. America is already far down that road!

POLITICS SUPREME: Office holders have always desired re-election, but under a socialistically inclined government that desire has increased many-fold. The biggest reason is that there is more and more tax money to spend. Even in America, many politicians appeal to voters by promising more and better benefits for all and, judging from history, many voters believe what they hear and vote accordingly.

Socialism develops a short time viewpoint. Voters look to the possible temporary benefits and fail to see ultimate ruin. They conclude that government benefits come out of thin air rather than from taxes paid by everyone, including themselves. They forget, too, that a considerable part of every tax dollar sent to Washington stays there and never gets back in the form of government checks.

Socialism and statesmanship do not mix. Too many socialist-minded office-holders are tempted to ignore statesmanship, and yield to the temptation.

Instead of working for the greatest long-time good for all, they buy votes by promises which too often cannot be fulfilled.

BUREAUCRACY: Socialism fosters bureaucracy. To administer more and more socialistic experiments such as old age help, unemployment insurance, socialized medicine, government in business, etc., requires a continually growing horde of government employees. Under socialism, the less efficient and less energetic workers tend to end up in government jobs. This, plus Civil Service requirements, decreases efficiency, which is still further lessened by the desire of government employees to win votes rather than to serve all citizens.

GOVERNMENT IN BUSINESS: Most socialists believe that government should engage in business. Excuses given include "Private industry is not serving the demand," "monopolies are gouging consumers," "government-owned industry can produce cheaper."

In practice these claims fail to develop because:

Government-owned businesses pay no taxes; therefore, private industries must pay more.

Government-operated businesses never go into bankruptcy. They continue whether or not they are efficient and whether or not they become outmoded and unnecessary. If they fail to pay expenses, deficits are made up from your taxes and mine.

When a segment of business is dominated by government, lack of competition prevents the development of new and better tools and methods, something which has always characterized private industry in this country.

WHO? With all these handicaps and shortcomings one can well ask "Who wants socialism?" Those in favor of it can be divided into three groups: (1) Subversives who hope thereby to bring about a change in our form of government; (2) selfish individuals who hope for personal profit or power through holding office or becoming a paid bureaucrat, or by controlling those who do; (3) those gullible souls who have failed to think the problem through, and who have swallowed the glowing promises made by the first two groups.

YOUR GATEWAY TO BETTER FARMING— is it *big* enough?

CHANCES are you could fill a good-sized sheet of paper listing all the electrical equipment you've added to your farm in the last few years. A great many farmer customers today use 4000 kilowatt hours per year—*eight times as much as a few years ago!* But has the wiring—and especially the electrical entrance—of your farm been modernized to keep pace with this tremendous increase?

30-Ampere Service Not Enough

Overfusing existing circuits is a distinct fire hazard. The farmer who has stepped up the ampere rating of his electrical entrance and installed new circuits doesn't need to fear the inconvenience of blown fuses . . . or the disaster of complete electrical breakdown. Electricity is a cheap and willing servant. But just as you wouldn't expect to get your main water supply through a half-inch pipe, you can't expect electricity to do its job on weak, overloaded lines.

Know Your Electrical Load

List the ampere ratings of the electrical equipment in your home and on your farm. If your building entrance service is under 100 ampere capacity, you may find a serious overload. If you do, get the advice of your county agricultural agent or your power company representative. It won't cost you a cent . . . and it can save you a lot!

NIAGARA MOHAWK POWER CORPORATION

NIAGARA  MOHAWK

The Song of the Lazy Farmer

THERE'S nothing makes me quite so mad as list'nin' to a goof who's had a couple extra years of school and loves to quote some English rule. I mean the kind of birds who faint if you just use one little "ain't", or think you're headed for your doom if you say "who" in place of "whom." Such people hardly ever squawk that they can't understand your talk, and yet they'll stop you in mid-flight to say your grammar isn't right; and if you argue, glory be, they'll quote some book or Ph.D. which may be famous o'er the land but which you can not understand.

I claim the profs, with all their laws, are often off the beam because it's common folks who make our speech and not the long-haired birds who teach. Some words that we use ev'ry day would make the experts' hair turn gray; and still, without 'em how could we say things the way they ought to be? For instance, at this time of year Mirandy fills my heart with cheer by baking lots of punkin pies, the finest food you can devise. But just

suppose I heard her say, "We're having 'pumpkin' pie today"? My happiness would quickly cease and I would skip a second piece, 'cuz "pumpkins" ain't the same at all as punkins harvested in fall, the latter's used for homemade pie, the former's something that you buy.

Eating the SEED CORN

By F. A. HARPER

A PERSON who has just borrowed some money at a bank and walks away with a lot of it in his pocket, or has it deposited to his checking account, is likely to feel prosperous. Now he can pay off all those bills. Perhaps he even has enough left over to make a down payment on a new car. The grocer and the doctor, whose bills he has now paid and who see him sporting the new car about town, agree that he has become prosperous. The fact that he is really in a worse financial fix than he was before borrowing from the bank is not generally known.

As the end of the month rolls around, he owes more bills, including the note at the bank and the monthly payment on the car. This makes him feel poor again—unless he can float another and even larger loan at the bank, in which event the prosperous feeling and appearance may be made to return. This can go on and on, as long as the bank will allow it.

A Mass Illusion

But we know that real prosperity does not come this way. This is an illusory prosperity, leaving the victim in a poorer and poorer financial plight because of a debt that is ever growing larger and larger as compared with what he owns or what he is able to earn. Finally, the off-balance reaches a point where he is dumped into disaster, losing both his car and his other property. If death should come in time, he might be "saved from disaster"; but that would only throw the burden on his family instead.

No escape from eventual disaster is to be found by having two persons engage in the same kind of financial arrangement; the debacle is merely enlarged. Nor for three persons to do so. Nor for a hundred. Nor for the 150 million who comprise this nation. Yet America today is suffering the illusion of mass escape from this form of certain, eventual disaster.

There prevails a happy sense of national prosperity, as individually and collectively we go deeper and deeper

into debt. We borrow from each other. We increase our "savings," according to the government's figures. We compliment each other on how well we are doing. Not only do we buy many new things for ourselves, but we also try to play the part of a continuous Santa Claus for favored groups both within the nation and throughout the whole world.

The rules of simple first-grade arithmetic should warn us that there must be some catch in this "Alice's Wonderland." But where is the catch?

When we look at the record, we find that while our debts are going up and up, the tools and equipment necessary to maintain production and repay these debts are falling dismally behind. We are in the position of a man who spends all his income, and more, on fast living while making promises of good intentions about providing for his old age and infirmities; IOU's, made out to himself from himself, are placed into his strong box at the end of each month, thereupon confirming, he believes, his capacity for foresight and thrift.

Tools Wearing Out

Cutting through all economic and sociological gingerbread about the soundness of the procedure we are following, the sad fact is that we have for a long time been neglecting our industrial plant. We have been eating up the most fruitful part of our wealth. We have been eating the seed stock from which our high standard of living flows.

Our tax policy, as if skillfully contrived for such an evil purpose, has made it difficult if not impossible for industries to maintain and modernize their plants. New tools and new plants, needed to replace machines that have been worn out or have become obsolete and to meet the needs of an increasing population, are being sent abroad at the expense of a declining productive machine at home. This is economic suicide with a vengeance, and the fact that we may not realize what is happening does not alter the situation.

A \$100 Billion Lag

How much would be required to bring this productive machine up to its 1930 level per person? It would seem to require, at present prices, somewhere between \$75 billion and \$100 billion worth of productive equipment to make up the present shortage. This is from \$1,500 to \$2,000 per family. This is the amount we are now in the hole, as compared with 1930, in the productive buildings and equipment of corporations in relation to the population of the nation. Even this does not allow for the increases in our productive plant necessary for an advancing economy.

The large increase in the dollar income of the nation since 1930 does not explain away the sorry state of neglect in the upkeep and replacement of industrial equipment. Apparently we have been living on our capital fat, and seeming to have a prosperity that is not capable of being sustained. As a nation, we have been like the man who went deeper and deeper into debt, as month by month he refused to face the realities of his plight, and continued to borrow more and more from the bank while living beyond his productive means.

Otto Koch of Roscoe, Sullivan County, New York, with the champion male bird at the New York State Fair. Otto was Poultry Showmanship Winner.

IT'S ONE TWO

Go!

Farmers who buy new Allis-Chalmers tillage tools in 1951 will be equipping themselves with superior farm implements, smoothly designed and beautifully streamlined. They introduce features and advantages unknown even a decade ago. A universal feature of all these A-C tools is uniformly deep penetration without heavy weighting or forced pressure.

With these tractor implements it's:

ONE—space CA or WD tractor wheels instantly with engine power to fit the implement.

TWO—attach the tool quicker than you can hitch up a team.

GO—with Hydraulic Power Control at your command for new, outstanding field performance.

The new master line of Allis-Chalmers tools includes mounted, semi-mounted, and trailed types... hydraulically or mechanically operated... in many sizes, styles and combinations. All are "quick-hitch" implements, with a full range of adjustments to assure quality work. Construction is strong and durable. You will find them moderately priced. Regardless of what crops you grow, you will be assured of uniformly better tillage.

The Allis-Chalmers dealer nearest you will be glad to show you these modern farm tools.

Boy AND TOYS Today!
MAN AND MACHINES
Tomorrow!

This little fellow says emphatically... "These are My Toys"...
It's natural for him to say this, and he's the capitalist of tomorrow...

He may decide to be tomorrow's farmer or business executive or almost anything he wants to be. But that's not the most important thought right now...

This is...
He can be the capitalist of tomorrow because our competitive enterprise system says he will be free to work where and when he will, to save, to invest, to spend. He may invest to his own advantage and that makes work for others. For there is now, and must continue to be, incentive! An incentive that is realistic... that creates... that helps produce more.

We at Minneapolis-Moline hope to do business with this young American. We hope to help him grow... and in turn his growth will help our growth... and our growth will again create more and better opportunities for more people.

The world has never known a better system or plan of progress for all mankind.

Let's guard this way of life... our American Heritage. It's been mighty good to a lot of people.

Our part in the American parade of progress is the manufacture of a complete line of Modern Farm Machines, Visionlined Tractors and Power Units for modern farming and industry.

A Legacy

By A. B. Genung

IN 1900 Henry Gray died, leaving young Henry a farm home and other property and \$20,000 in the bank. In our community that was quite a lot of money. Young Henry was thus well fixed. He was known as a man of means and power, largely because he had that \$20,000 in the bank.

That cash resource back there a short half-century ago represented a great deal of purchasing power at the then going level of prices. Henry paid his hired man (a neighbor) \$25 a month, and the man brought along his own dinner pail every day. The best farm in the neighborhood sold for \$60 an acre, \$6,000 for a hundred acre place with a fine house and out-buildings. The entire equipment on that farm, four horses, harnesses, wagons, haying and tillage machinery and the like sold for around \$2,000.

A good cow cost \$75. Bread, if you bought it at the store, was 5c a loaf. Hard nut coal was about \$6 a ton. Potatoes were 30c to 50c a bushel. Butter was 18c to 20c a pound. A good suit of clothes could be had for \$20, and a very good pair of shoes for \$3.50.

Henry Jr. was a thrifty man like his father and given to holding on to his property. He never touched that nest-egg in the bank—spent only the interest, which, however, amounted to some \$800 a year.

Last month Henry Jr. died. His son, Henry III, inherited the homestead and the \$20,000 in the bank.

But something had happened to the latter. It had shrunk.

Henry III now pays his hired man \$125 a month, plus house and everything furnished. That hundred acre farm is held at \$22,000. The cows and machinery on it cost \$20,000 more. The village home that was worth \$2,500 back in 1900 is now priced at \$10,500. Bread at the store is 18c a loaf, coal

\$20 a ton, the suit of clothes \$60, the good shoes \$12.

Reckoned by 1900 standards of living, Henry's \$20,000 nest-egg in the bank has shrunk to about \$5,000.

Now, what does this mean? It means that one of the classical functions of money—to serve as a storehouse of wealth—has been destroyed in this country. The destruction has largely occurred in the last twenty years. It is still going on. The 1939 dollar is today worth about 57c and bids fair to shrink to half that within five years.

It has a larger meaning: that a free enterprise system cannot be maintained with unstable and steadily depreciating currency. The private capital which is the lifeblood of competitive enterprise will not flow into it. Ultimately no one will put capital out on long time notes, bonds, mortgages or contracts when it is a certainty that they will get back less exchange value than they advanced. This is the road along which private debt inevitably is converted into public debt, with public control—the road to socialism.

It means that if you are going to leave cash or fixed instruments to your children, they will almost certainly inherit only a fraction of what you now think. Money today is one of the most surely depreciating commodities that man can own.

War and a socialistic government have done this to us. And it is a kind of insidious damage that the average man doesn't know how to forestall. To debase the currency of a nation is one sure way to penalize the thrifty, squeeze the creditors, ruin the small-income people, derange all prices, charges, rents, wages, contracts and the normal plans of people.

Had the earlier Grays kept their cash invested in real estate or cows or productive business or gilt-edge common stocks or some other good equities, Henry Third would today have a legacy with a buying power equal to his grandfather's.

If you are planning to die, or better still, to live, turn this over in your mind. Until we have a great change in Washington, the wisest use for money is as a medium of exchange.

Isn't One Hundred Years LONG ENOUGH?

By RUSSELL COLEMAN

ABOUT 100 years ago in Europe, people became concerned over the "industrial revolution." Because machines were beginning to take the strain and sweat off men's backs, Karl Marx and his followers prophesied doom, predicting that capitalism under the machine age would gobble up all the wealth, leaving the working man destitute unless all people could be organized on a socialistic basis.

At this time America was too busy with its own affairs to pay attention to such nonsense. The main concern in the United States was how to make itself strong enough to withstand its enemies and at the same time establish a government that would give its people personal liberty. To do this American pioneers in government leaned heavily on the philosophy of Jefferson, who, in 1826, had said:

"I have no fear but that the results of our experiment will be that men may be trusted to govern themselves without a master. Sometimes it is said that man cannot be trusted with the government of himself. Can he then be trusted with the government of others or have we found angels in the form of kings to govern them? Let history answer this question."

"Planners" Failed

History has answered the question. Only compare the progress made under the negative philosophy of Marx, where government planners direct the lives of its citizens and where every attempt is made to discourage man's initiative, with the positive philosophy of Jefferson where man is free and encouraged to develop his own talents.

How well our Nation has prospered with the industrial revolution is evident by comparing conditions today with those existing 100 years ago.

1. In 1850 the United States had only 23 million people, only 33 percent of whom were gainfully employed. Today we have 150 million with about 40 percent gainfully employed.

2. Then animals and men did 70 percent of the Nation's work; machines only 30 percent. Today animals and men do 6 percent; machines 94 percent.

3. The work-week at that time was 70 hours and the average worker's out-

put per hour was 27 cents worth of goods and services measured in present-day buying power. Today the average work-week is 40 hours and man produces an average of \$1.40 per hour.

4. A century ago 80 percent of our people were required to live on the farm to produce life's necessities; other employment opportunities were almost nonexistent. As a result of industrial developments, today only 18 percent of our people live on the farm.

Machines Create Wealth

Yes, the machines which Mr. Marx feared have been responsible for the largest labor force working the shortest hours at the highest wages in world history. Suppose Americans in 1850 had read the communist manifesto of Karl Marx and had taken it seriously. What would have been the result? The continual process of dividing the wealth would have discouraged Edison and others like him from creating new wealth, would have prevented the accumulation of capital to invest in the mass production of machines, without which most of our labor would still be required on the farm to produce the bare necessities of life. Certainly it would have been impossible for industry to provide \$8,000 worth of tools for each laborer to produce more goods and services. Perhaps there would have been little if any development of electricity, few automobiles, radios and airplanes.

Isn't 100 years long enough to convince our people that private industry is a vital and essential part of American government? Isn't 100 years long enough to convince government that its proper place is to regulate and govern, not to dictate and control business affairs; that even good government cannot substitute for self-government?

Isn't 100 years long enough to convince labor that its interests are best served where profits are not only high enough to provide for good wages but are also great enough to allow a constant investment in better tools? Isn't 100 years long enough to convince capital that it has a continuing responsibility of improving its products and providing better facilities for its employees?

Let the Church Speak Up for Capitalism

IHAVE read many attacks on our system. But no one attacks the standard of living which that system—helped by our Christian beliefs—has made possible. The system's enemies seem to want to persuade us to move out of this capitalist society into something which they imagine would be a Socialist paradise. But I gather they would insist on taking the fruits of capitalism with them: the highest wages, shortest hours, greatest security and most widely shared abundance of good things from automobiles to college educations and homes of our own. Without these capitalists' fruits, Socialism, even to the Socialists, would not be paradise.

As a Christian minister I want to do all I can to make capitalism more Christian. But before I join the advocates of some other system, I want to know how large a place the church and its teachings would have and how well our Christian idea of man and our hope for his progress would fare.

If, in human terms, capitalism some-

times falls short, so does the Christian church. Both are human institutions. Both, therefore, suffer from the same trouble: people. And people—not economics, politics or social philosophy—are my first business in the ministry. They were Jesus' first business.

I am not going to quit the church because I know there is some hypocrisy in it. I know there is much more that is good in it. To reduce the hypocrisy I am going to work on the hypocrites. I am not going to make war on capitalism because I know there is some paganism in it. To reduce the paganism I will work on the pagans.

No one claims that we have yet made America an earthly paradise. But let the church rejoice at how far, under our system, we have come. Let it rejoice at the men and women—many of whom sit in its pews on Sunday—who aim, through that system, to help us further forward. Let the minister rejoice that his is a calling to raise up more of their kind.—*Reprinted by permission of the Author, Norman Vincent Peale, and "Reader's Digest."*

We Need Florida Sunshine Too!

"us cows that is"

You can't send your cows to Florida, but you can bring sunshine to your cows with Florida Citrus Pulp—now available year 'round!

Florida Citrus Pulp is highly palatable and cattle eat it readily. A bulky feed which keeps well in storage, this Citrus Pulp is extremely high in TDN (total digestible nutrients).

The fiber content of Florida Citrus Pulp is extremely low and the feed contains factors which stimulate milk production. This feed imparts no unnatural flavor to the milk.

**THE SUNSHINE
CATTLE FEED!**

Florida Citrus Pulp is mildly laxative and imparts a sleek appearance to the cows, giving them a glossier coat of hair. The feed contains the important minerals—calcium, magnesium, phosphorus, iron, copper, zinc and manganese—essential to milk production and animal growth.

For free, illustrated folder giving complete information about Florida Citrus Pulp, write a card today to Citrus Processors Association, P. O. Box 188-A, Lakeland, Florida.

IN BUSINESS TOGETHER SINCE 1857

Borden's is proud of its 93-year association with the Dairy Farmers of the Northeast.

We have been — and remain — partners in the building of a great agricultural economy. Together we have developed the means of bringing pure, fresh milk to countless thousands of consumers.

This type of relationship is the basis of the great American way of life—serving one another in accordance with our country's tradition of free enterprise.

CRAINE-NATCO TILE FOR PERMANENCE AND VALUE

You see them everywhere . . . the Natco Tile silos which were built thirty years and more ago.

Craine-Natco silos are an outstanding choice *today*, too. Styles change, but not Natco performance. Each tile unit contains the maximum number of air cells for better insulation. They're glazed for permanent beauty . . . and they're unharmed by silage acids!

CRAINE'S THE NAME

Write us now for details on the Natco and other silos in the famous Craine line. Prices are lower than you may think. Easy terms available.

POWER Saves Backs — Multiplies Production

IT IS INTERESTING to speculate on what influence, if any, the invention and manufacture of farm machinery has had on the freedom all Americans hold so dear. Men with keen minds have dreamed dreams of deliverance from back-breaking toil, and no dictatorial, despotic or socialistic government interfered with translating those dreams into reality or in reaping the rewards of such initiative.

In his book, "These Changing Times," E. R. Eastman, Editor of *American Agriculturist*, says on this subject:

"The opening of the Mississippi Valley and the development and rapid application of efficient farm machinery were the two factors which more than anything else have made America a great industrial nation. In the 250 years preceding 1860, a total of only 407 million acres of land had been incorporated into farms in America. But in the forty years from 1860 to 1900, 431 million *new* acres were added, more than doubling the farm area. It is no wonder when we know this that the last fifty years have seen the coming of the greatest industrial nation in the world, which has given its boys and girls more opportunity and its people more liberty than has any other country. Not only was the acreage of America doubled in this brief space of time, but the new land added had a production power never equalled by any other similar tract in the world. The fertility of agricultural America was a gold mine of natural resources and, like a mine, it had to have machinery to develop it."

National Grange Master Goss, in a talk directed to consumers and made the evening before his death, told the story of the tremendous importance of farm machinery and farm supplies in U. S. food production. You will find some of his remarks on page 30. They set me thinking of the changes and improvements that have been made in mechanical labor-saving devices over the past few years.

TRACTORS: Year after year farm tractors are sturdier and better adapted to the tasks they are expected to perform. The tremendous increase in the number of tractors has come partly because of the improved design, partly because more and more farmers have decided that tractors are practically indispensable, and partly because many men who used to own one tractor now own two or three.

GARDEN TRACTORS: One evidence of the increased versatility of tractors is the rapid development since the war of garden tractors. Many a farmer has concluded that even though he has one or more field tractors, a garden tractor

is an extremely handy thing to have around.

CHAIN SAWS: The importance of a piece of equipment is not always determined by its size. For example, there is the chain saw which has made it possible for a farmer to cut his own firewood quickly and to harvest timber from the farm woodlot without using up all his profits in hired labor.

IRRIGATION: Then there is the renewed interest in irrigation. Water has been added to crops for centuries, but new ideas have increased interest, especially a light-weight movable pipe which can be used to irrigate field crops, meadows, and pastures.

BARN HELPS: A great many of the mechanical aids which reduce the amount of muscle work a man performs are found in the farm buildings. For example, take gutter cleaners. The wheel barrow was a big advance over removing the manure from a barn with a shovel. The coming of litter carriers brought more improvement, but mechanical gutter cleaners took hold of the imagination of dairymen with amazing speed and the number of installations is increasing rapidly. Similar comment could be made relative to silo unloaders which, through electric power, bring silage down from the silo.

Running water in a barn is, of course, relatively old but is as important as ever, and while ventilation systems may not save much labor, they do save decay of your building and provide better conditions for milk production.

For that matter, milking machines are not particularly new though they have been greatly improved. One of the important developments has been "timed milking" with emphasis on faster milking which careful experiments have found results in time-saving, more milk, and less mastitis.

POULTRY EQUIPMENT: Mechanical aids in the poultry house are in general newer than such aids in the dairy barn. Recently at the NEPPCO Exposition at Harrisburg a mechanical dropping board cleaner was exhibited which we predict will be rapidly accepted by poultrymen. (See Page 33)

The present-day multiple story hen house would be practically impossible without a power hoist to bring feed to the upper stories from which it is delivered to each pen by gravity, and it would be difficult to provide water for large numbers of hens in one pen without an easy method of preventing freezing such as is recommended through the use of soil heating cable on water pipes. Also relatively new are automatic feeders where an endless chain carries feed from the bin to a hopper in the laying house. Another new development is the mechanical poultry picker and improvements have been made on mechanical egg graders and cleaners.

WEED KILLERS: For centuries weeds have cut crop production seriously and the richer the soil the better the weeds seemed to grow. Chemical weed control has swept the country like wildfire and the practical application of chemicals to kill weeds is largely dependent on adequate and appropriate machinery. The idea of a sprayer which would apply a low volume of spray per acre has been translated into use by developing the right machinery.

To a certain extent growers of fruit have been slow to adopt mechanized

farming. Perhaps one reason is that no one has yet found anything to substitute for the human hand in picking apples, peaches or pears. However, an interesting development is an elevated catwalk on a tractor trailer which can be shoved into the top of a tree where a man on it does such operations as pruning, spraying, and picking. Sprayers have increasingly put on more volume in less time until now speed sprayers apply an adequate amount of spray to a row of trees as rapidly as a tractor can be driven down the row, and what's more, one man does the entire operation.

We could go on for pages emphasizing the importance of machinery in lessening back breaking farm labor and in producing food for city consumers but just a few brief examples and we will leave the rest to your imagination. Years ago anyone who would have said there was any better way of making hay than a horse-drawn mower or side delivery rake, hay loader and hay fork, would have been considered out of his head. Since that time many new things have been developed including field balers, field choppers, crushers to increase the rapidity of drying, and of course the rapid increase in the use of grass silage.

The growing of potatoes has been almost entirely mechanized by multiple row planters, cultivators, diggers, potato combines which sack the potatoes as they are dug, and mechanical graders which sort them into uniform sizes. Airplanes are even used to spray or dust for insects and diseases, not only on potatoes but on many crops.

Not too many years ago a man who mentioned combines or corn pickers was thinking of the West or mid-West. But these machines have been adapted to northeastern use and you will find thousands of them on northeastern farms.

Too often the importance of the service which local farm equipment dealers give is underestimated. Farm equipment is essential, but through old age, misuse or accident, machines sometimes fail. When this happens it is important that repair parts and the skill to install them be readily available. With very few exceptions dealers do a magnificent job.

The end of the increase of machinery on farms has by no means been reached. Always there will be men with new ideas and the ability to transform them into action. Always there will be farmers glad to try anything which saves backaches. Together the manufacturer of farm equipment, the local dealer and the American farmer make an unbeatable team.

—H.L.C.

GOOD BOOKS — TO READ —

THIS Forum Issue of *American Agriculturist* is dedicated to the proposition that America is the best nation in the world, that a welfare state is so far behind free enterprise it is not even in the race, and that Americans have not yet lost their love of liberty.

As has been stated many times, American people will never vote for socialism or a welfare state at any one election. Nevertheless, they have been, and still are, swallowing small doses of socialism, a little bit at a time, until the welfare state is nearer than many of us think.

The complete story of freedom and the advantages of our capitalistic system versus the weaknesses of socialism and the welfare state would take more words than can be crowded into this issue; but the implications of the present trend toward socialism are so important that we urge every subscriber to read available books and articles on the subject. Here are a few suggestions:

Autumn Leaves by P. W. Litchfield, chairman of the Board of the Good-year Tire and Rubber Company. This book is one of the best statements we have ever read about the American system of free enterprise. Mr. Litchfield grew up in the tire business and is highly respected by all who know him.

For a copy send \$1.50 to the Good-year Tire and Rubber Co., Akron, Ohio.

Bureaucracy by Ludwig von Mises. If you have wondered what makes bureaucracy "tick," read Mr. von Mises' book and you will have a clear understanding, not only of the way it operates, but of its shortcomings and of its eventual deadly effects on liberty. The book is published by the Yale University Press and the price is \$2.00.

The TVA Idea by Dean Russell. Using TVA as an example, Dean Russell gives a devastating explanation of the dangers of government in business. He points out that government-operated business never goes bankrupt. If losses are sustained, the taxpayers pay them. "The TVA Idea," price 75 cents, is published by the Foundation for Economic Education, Irvington-on-Hudson, New York.

Liberty — A Path to its Recovery by

F. A. Harper, a former member of the staff of Agricultural Economics and Farm Management at Cornell. Price, Paper covered, is \$1.00.

Also published by the Foundation for Economic Education is a small pamphlet entitled **Price Supports** by W. N. Curtis. You can get a single copy of this without charge, or if you feel it is worthwhile to present it to your friends, you can get 10 copies for \$1.00; 50 copies for \$3.75, or 100 copies for \$5.00.

Freedom and Enterprise is the title of a pamphlet by F. A. Harper. The pamphlet was originally given as a lecture. You can get single copies of it free from F. A. Harper, Foundation for Economic Education, Irvington-on-Hudson, New York.

Animal Farm by George Orwell is published by Harcourt Brace. Mr. Orwell is an Englishman and *Animal Farm* narrates what happened when the animals on a farm revolted and set up their own government. Price, \$1.75.

Economics in One Easy Lesson by Henry Hazlitt. This book exposes many of the commonly accepted but erroneous ideas concerning our economic structure. It is paper-covered, costs 25 cents, and can be purchased at drug stores which carry a series of paper-covered books.

The Road Ahead by John Flynn is published by The Devin-Adair Company, 23 E. 26th Street, New York 10, New York. The price is \$2.50. This book can be bought in quantities in a cheaper edition from the Committee for Constitutional Government, Inc., 205 E. 42nd Street, New York 17, New York. If you have only money enough and time enough for one book, buy and read this one. The author shows how many ideas and developments, though apparently unrelated, are in fact parts of a definite program backed by more people than you think, and intended to turn America into a socialistic welfare state. Read it and you will find a reason for many events which have puzzled you.

If every citizen would read and understand two or three of these books, it would be impossible for politicians or crackpot theorists to peddle socialism or statism successfully.

Three freshman girls are among the Carl E. Ladd Scholarship winners for 1950-51 at the New York State College of Agriculture, Cornell University.

They are shown here with Mrs. Carl E. Ladd, wife of the late Dean and secretary of the New York State Home Bureau Federation, and Frank E. Beneway of Ontario, N. Y., chairman of the scholarship fund which has reached \$85,000.

The girls, left to right, are Mary Ann Smith of North Rose, N. Y.; Marian Trerise of Potsdam; and Marilyn Stearns of Palmyra.

For irrigation

Pump Performance is the Pay-off!

We don't have to tell you how much running water can add—in profit, convenience and comfort—to any farm today. But we would like to point out that the *dependable, economical performance of your pump* is the heart of your whole operation.

That's why the Goulds line is important to farmers everywhere. For irrigation, dairying, raising stock—for

any kind of farming—there's a specially built Goulds water system that will do the job best.

There's a Goulds for you, no matter what your running water needs or source of water supply. Goulds engineering know-how... developed through 102 years of experience—has developed a complete line of today's most modern pumps.

Write us, or see your Goulds dealer tomorrow.

The Farm Viewpoint on Production

By A. S. GOSS

EDITOR'S NOTE: Following are some of the statements made by the late Albert S. Goss at the New York Herald Tribune Forum. Mr. Goss, then master of the National Grange, had been asked to present the farm point of view on production. He did so very ably on the evening before his death.

Remember that his statement was given to a city audience. He pointed to many facts which consumers should know, thereby rendering a real service to agriculture.

HOW CAN a free democracy organize to meet a problem without losing its freedom? The answer is to maintain maximum production so there is plenty for all, and see that every one shares in the plentiful production according to his merits.

The Grange shapes its policies according to three simple guideposts which we commend for general use. The first is, "All prosperity depends on production of economic wealth." The second, "The compensation of each should be based on what he contributes to the general welfare." The third, "The principal function of government is to protect its citizens from aggression, both physical and economic."

As we point out in guidepost No. 1, the key to the problem is production. In this respect the farmer has few adjustments to make. He is always striving for maximum production. He is on nobody's pay roll, and if he doesn't produce he has no income.

When this nation was founded, 90 per cent of our people were farmers. This meant that it took nine farm families to raise enough to support themselves and one family in the city. Today one American farm family raises enough to support itself and approximately five families in the villages and cities. This situation does not prevail throughout the world, where on the average it takes two families on the farm to support themselves and one family in the city.

To maintain this almost unbelievable high rate of production, five ingredients are necessary; ample machinery and supplies, ample fertilizers and insecticides, an ample supply of trained labor, favorable weather, and efficient management and hard work.

Farm mechanization and bringing electricity to the farm have enabled farmers to cut down their labor requirements tremendously. If the pinch comes, farmers, like every one else, can still reduce their hired labor somewhat, but not another 25 per cent.

Maintaining maximum production with minimum labor requirements will be possible only if farm machinery, and particularly replacement parts, are constantly available. It should not be overlooked that this tremendous increase in production now requires a type of skilled mechanic, skilled breeder, and skilled operator, and we should not repeat the mistake made at one period in World War II when we considered that any could farm.

A tremendous portion of our unpre-

cedented increase in production during the last ten years has been dependent upon fertilizer and insecticides. We must make sure that supplies are available at prices farmers can afford to pay.

Except in irrigated areas, the weather is beyond our control but machine production permits skilled timeliness in planting, cultivating and harvesting which has made great progress in combating the vagaries of the weather. Weather conditions also affect labor demand. Farmers must not be handicapped in securing skilled labor exactly when needed.

To get full production a reasonable price is essential. We bungled through many costly mistakes during World War II which must not be repeated. For example, when it became apparent that the European war would put a strain on our food supplies, Secretary Wickard called for a very large increase in the fall pig crop. Farmers responded with a will, but immediately the price administrator put a ceiling on lard as less than production costs. Millions of bred sows took a look at the lard price, gave up the prospect of the happy event, and started for

The Cost of Relief

By HENRY D. SHERWOOD

TAXPAYERS' money spent by New York State for social welfare roughly doubled between 1945 and 1948; the amount spent rose from \$169 million to \$332 million. This year I am told the figure will run above \$385 million.

Of the 1948 figure, \$123 million was paid by the State, while the local share was \$155 million. Just the cost of administration alone that year ran up to about \$28 million. In addition, the counties and local units are spending staggering sums for welfare.

The State has spent more than its income for two years, and it is the welfare cost that is chiefly responsible. This year the Comptroller's report shows that the "local assistance fund" piled up a \$14 million deficit, throwing the whole balance sheet in the red.

This whole situation has reached amazing proportions. On every side we see these something-for-nothing ideas growing like mushrooms. If one doesn't find work conveniently nowadays, there is unemployment insurance to live on. If a man breaks his leg getting out of bed, the State will take care of him with its new disability insurance. Our hired men now are under the social security tent, paid for directly and indirectly out of our pockets.

I can truthfully say that the Grange has always stood for kindness, charity and benevolence in the rural neighborhood. Our Grange people are upstanding, self-supporting citizens who pay their taxes and support this country's institutions. But we are old-fashioned enough to believe that useful work is a man's ticket to the reasonable comforts and luxuries of life. We will help the unfortunate, but we have no surplus to waste on social drones and parasites.

This welfare cost, paid for by hard-earned tax money, has gone too far. Two things should be done about it. First, the cost should be cut down, and by that I mean in county and town budgets as well as in Albany. And I mean further that the officials should root out the shameless drones on the

the slaughter block, with the inevitable result that price ceilings established below cost reduced production and initiated a series of shortages from which it took many months to recover. Production is the answer. Prices must not be reduced below a compensatory level or shortages will inevitably result.

Farmers Work

Last is hard work. Farmers are already working an average of about sixty hours a week compared with a little over forty-one hours for industry. They can and will step this up to sixty-five or seventy hours, but they don't want to see farm man power drained off in order to maintain a forty or forty-eight-hour week in industry.

If America can maintain maximum production, the key to the problem is expressed in guidepost No. 2. "Each should be compensated for what he contributes to the general welfare." Farmers have developed a parity formula designed to indicate a price level for farm products which is fair to producers and consumers alike, and which fluctuates with wages and production costs. If labor would do the same, it would be a big step forward in answering our question. Then if industry abuses its freedom through exacting unreasonable returns for its services, it would be quite possible to set up legal bounds within which it must stay to prevent economic aggression, but that would not constitute loss of freedom any more than our anti-trust laws do when they curb combinations in restraint of trade.

rolls. Second, much greater control of this spending should be put in the hands of local authorities.

County welfare authorities ought to submit to town boards every so often a list of names of all persons on the relief rolls, with the amounts paid to them. Also, it would tighten up on the waste, as the Grange has already suggested, if relief sums were paid out in the form of purchase certificates rather than cash.

Let's Wake Up!

We have stood idly by and have seen this philosophy of statism ruthlessly exploited by some politicians. We have seen the basic liberties of our people being cut away. We have seen the government moving toward the control of essential production, transportation, trade, banking and even private property.

We see the government operating on a spendthrift basis with expenditures far exceeding income—something you and I as individuals could not possibly do. We have seen the rising tide of taxes that today take a fourth of every working day to pay. We are becoming alarmed at what is going to happen to our savings, our bonds, our insurance policies, even the paper money in our pockets.

We see the most precious thing that people have ever gained in all the history of civilization—individual freedom—being taken away from us and our children. We have reached a point where it is high time to do something about it.

Every thinking citizen should begin right now by voice and by vote to correct this trend which has already gone entirely too far. As a citizen, and an individual, you can do more than you think. Beginning today, I urge everyone here to start fighting right now to help preserve our liberties.

EDITOR'S NOTE:—The above remarks are part of the Master's address at the Annual session of the New York State Grange.

Let's Face the Facts

*About Debt, Taxes, and Defense **

By HARRY F. BYRD,

Democratic U. S. Senator from Virginia

THERE have been just five years since World War II ended. They may well go down in history as the most irresponsible five years of the great American Republic, and, unless we begin thinking straight and acting accordingly, they may be recorded as the prelude to the downfall of the greatest democracy of all time.

In these five years we have squandered the greatest prosperity ever to come to any nation; the Federal Government has collected far more taxes than ever before; it has spent far more money on purely domestic-civilian programs than ever before; it has spent far more money for defense than ever before without achieving preparedness; and we have failed to curtail the greatest public debt any nation has ever known. In the past 19 years our government has been in the black in only two of them. We have started deficit spending again in a large way, and it is very possible that our federal budget may not be balanced before we go over the precipice of financial disaster.

Fiscally Vulnerable

We have maneuvered the greatest country, the best form of government, and the finest nation of people in the history of the world into a position where they are fiscally vulnerable from within, and perhaps so greatly extended that they may be militarily vulnerable from without.

This then is a simple plea for the preservation of freedom in our homes, in our work and our religion. It is a simple plea that we do what we know has to be done—strip off the luxuries of sociological ventures and political bids for votes by spending public money. It is a simple plea that we get down to the sweat and the toil of the work that is required to make this country fiscally sound and militarily impregnable. . . .

Here is the situation into which we have gotten ourselves—the situation which we must overcome if we are not to be overcome.

We have only six per cent of the world's population. We have assumed the responsibility for propping up the economy of half the world and defending more than half the countries of the world from military attack by communist dictators who control the other half of the earth.

These are tremendous responsibilities which we have assumed at a time when our national debt is more than a quarter of a trillion dollars—more than any other nation ever dared to conceive, much less assume.

Our only hope to meet the responsibilities we have assumed and to preserve our free way of life lies in the capacity of the free enterprise system to produce in mass quantities these goods, materials and engines of war which are needed under such conditions in better quality and greater quantity than all of our adversaries combined. And there is no reason for us to expect much help from the nations who are associated with us, for they are more wards than allies. . . .

Yet, the President and our leaders are still insisting upon expansion of socialistic legislation—socialized housing, socialized medicine, socialized farming (the Brannan plan)—which, if adopted, will destroy the free enterprise system. This free enterprise system upon which we depend cannot survive in confiscatory taxes or overwhelming debt, or state socialism.

The driving force behind our progress is private initiative and the unleashing of personal energy in response to rewards for achievement. Upon these principles we have built the American system, which is the best that has as yet been devised for the satisfaction of human wants and individual freedom. We need to have a dynamic and expansive economy to carry the staggering load that has been imposed upon us.—From *New England Letter, The First National Bank of Boston.*

What happens to free enterprise under socialism has been demonstrated by the British before our very eyes in these same five years since World War II.

Whether our communist adversaries will continue to weaken us by prolonging this series of sideline satellite wars breaking out here and there all over the globe, or whether they will risk committing themselves and their own resources to an all-out third World War, is to be their decision—not ours. Russia has the time table—not us.

We must do everything it takes to defend ourselves. Our own defense should be as nearly impregnable as possible and should be our first consideration. But, even before we started building our own military defenses, we committed ourselves to military defense of virtually indefensible foreign nations. To defend ourselves in any circumstances, of course, is our duty, and to defend the others in the current circumstances is a responsibility to which we have committed ourselves.

Our federal expenditure budget this year will be between \$50 billion and \$75 billion, and it will be higher for years to come before it gets lower. Our tax budget must approach the expenditure figure as nearly as possible, and it, too, will be higher for a long time before it gets lower. Our debt, also, will rise for years to come before it gets lower.

Sacrifices Necessary

These are the grim facts that we face but have not been told about. Unfortunately, the more gruesome part of the burden we carry must be borne by the fresh young armies, navies and air forces we send abroad. It is not too much to ask the older generation to roll up its sleeves and cast aside its luxury and make the economic sacrifices which are necessary to the preservation of the nation, the form of government and the freedom which was its heritage.

I do not concede that either democracy, or free enterprise, or any other American freedom has run the course of its usefulness in the world. They have been worth fighting for and winning for in the past against both economic and military challenge, and I do not concede that they were any dearer to those who have fought and won before than they are to us today. We shall win again, but not until we begin thinking straight through all the double talk that we hear to the hard core of the problems that confront us; until we recognize the sacrifices we must make; until we see clearly the course we must take; and until we act accordingly.

* From a speech made at Forest, Va., on Sept. 9, 1950.

“YOU cannot bring about prosperity by discouraging thrift. You cannot strengthen the weak by weakening the strong. You cannot help the wage earner by pulling down the wage payer. You cannot further the brotherhood of man by encouraging class hatred. You cannot help the poor by destroying the rich. You cannot establish sound security on borrowed money. You cannot keep out of trouble by spending more than you earn. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves.” —Abraham Lincoln

HATCHING EVERY WEEK—Pullorum Clean Ebenwood Farm Hamps. Nothing better for eggs, meat, and profits. Free catalog. EBENWOOD FARM, Box B-50 West Bridgewater, Mass

Suggestion for Christmas

We suggest a Christmas gift which can bring many happy hours and helpful ideas to your friends during the next two years.

It is a subscription to AMERICAN AGRICULTURIST. There is something personal about such a worthwhile gift. Each issue of the paper will be a remembrance of your thoughtfulness.

The cost is low---only \$1.00 for a 2 year subscription---. We'll send a Christmas card telling them you are making the gift.

Fill in name and address below. MAIL RIGHT NOW. Then some Christmas shopping will be done.

More Chickens for Meat

By ROGER CORBETT National Association of Food Chains

HERE are a couple of ideas which might help in selling poultry: The first is from Cliff Carpenter of the Institute of American Poultry Industries, who says, "Refer to and promote poultry meat, not broilers, fryers, roasters, etc., but poultry meat. This will increase the idea that it is competitive with other meats."

Roger Corbett

This couples in with a thought from Howard Pierce of the A & P Tea Company when he says "Promote poultry, the five-taste meat." He makes the point that New England is roaster conscious, while the South is fryer conscious. Both are wrong. Both should widen their point of view and discuss chicken meat that can be broiled, fried, roasted, barbecued or served en casserole.

These ideas have a chance of developing the poultry meat market. A further thought is that of using two small chickens rather than one, especially in roasting. This can reduce the cost because of the more rapidly grown chickens, and can reduce the cost of cooking because the two small chickens will cook more quickly than one large bird. The host who serves two chickens instead of one is a better host and impresses his guests with his generosity.

Sixty million more broilers will be needed in the United States in 1955 than were produced in 1949! Fifteen million additional turkeys will be needed in 1955 as compared with 1949!

These striking and optimistic statements are based on several assumptions, as follows:

(1) That the production of eggs per laying hen will continue to increase at the present rate. Thus, there will be no more poultry meat coming from laying flocks than there was in 1949.

(2) That the so-called "farm chickens" which come from non-commercial flocks will not increase in the future.

(3) That the present rate of consumption of broilers will continue.

(4) That the rate of population increase will continue.

(5) That the increasing per capita consumption of turkeys will continue, which will mean instead of 4.1 pounds per person per year, an average consumption of 5.3 pounds of turkey per year in 1955.

These increases are 12 percent of the 1949 production of broilers and 35.5 percent of the 1949 production of turkeys.

The specialized broiler producer can now place broiler meat on the market so that it can be sold to Mrs. Home-maker at a price less per pound than for any of the so-called "red meats." There can be some change in this relationship between the two, but in general the broiler producer seems to be in a very good competitive position. No one ever went broke by reducing his actual costs of production, and the broiler producer has been doing just that.

Apparently the consuming public of this country likes the tender, high quality meat that comes from the specialized broiler. This gives a well-nigh unbeatable combination of low cost, high quality and excellent acceptance by consumers.

This is a most optimistic picture for the broiler grower, but lest he become too confident, let him not forget the competition from the turkey producer. Turkey broilers are now being moved in carload lots into some of the Eastern markets. They are being produced at a less cost per pound than is the chicken broiler. This is due to the fact that there is greater feed efficiency on the part of turkeys, and the rate of growth during the early weeks is greater than that of chickens. There will be keen competition in the future between the turkey broiler producer and the chicken broiler grower. There will be no monopoly on the poultry meat market!

The chicken meat producers are on the march! They are going to grasp their opportunities, and if they will learn to regulate their production in line with demand, there is no reason why the future should not be a completely optimistic one.

Warfarin—A New Rat Destroyer

POULTRYMEN wage almost constant war on rats by means of cats, traps, poisons and attempts at rat-proofing buildings. Their efforts certainly go a long way toward holding this ancient enemy of mankind in check, but probably never can be entirely successful. Rats are wary and wise and resourceful, and they are migratory. You might get rid of the last rat on your place today and still have some around tomorrow because of a new immigration tonight. It is always good news when a new weapon becomes available for this war on rats. The newest is "warfarin" and it works in a new way.

The letters W-A-R-F are the initials of the Wisconsin Alumni Research Foundation. Warfarin is a chemical developed in the Department of Biochemistry at the University of Wisconsin, where its rat-killing properties were discovered. It is a powder without taste or odor, and does not dissolve in water. Mixed in very small amounts with corn meal, or other baits that cannot be carried away, the rats will continue to eat it. Apparently they do not associate their condition with the bait. The reason for this probably is that the poison does not act at once. Continued feeding for 5 days or more is necessary. The chemical prevents the blood from clotting, and the rats eventually die a painless death from

internal hemorrhage.

Extensive tests of the new poison have been made over a two-year period in order to get the answers to such questions as, Will it harm livestock and pets? How much is needed? What bait is best? Will it make other rat poisons unnecessary? Here are the answers in brief:

Single doses, even in large amounts, will not harm pets or larger animals. Cats or dogs might eat rats or mice killed by warfarin and still not be harmed unless it was their only diet for 4 days or more. Use bait material that is not relished by cats and dogs and that can be left several days without spoiling. A mixture of oatmeal and corn meal (50-50) has been suggested; also freshly ground corn meal. Another suggestion is white bread crumbs. It may require up to 10 pounds for a badly infested place.

The amount needed will depend on the number of buildings. Large buildings should have two feeding stations; corn cribs, brooder houses, etc., should have one. Leave the bait in place for at least two weeks — about a pound in each place.

Warfarin should be used in addition to other poisons that act quickly. Let red squill or antu make the first heavy kill, and let warfarin be the moppper-upper. It is now on the market under various trade names.—L. E. Weaver

What's Ahead for AGRICULTURE

By W. I. MYERS

THE outlook for farm prices during the next few years is reasonably favorable. Since farm people are a steadily decreasing minority of the total population, it is important to develop farm programs that are in the long-run interests of consumers as well as of producers. Such action would

W. I. Myers

help to correct the present bad public relations of agriculture. The vigorous criticisms of consumers are due largely to high meat prices and to the potato, egg and butter price-support programs.

This antagonism is not lessened by the fact that meat prices are high because of consumer demands and are not due to price-support programs; nor that potatoes and eggs are relatively cheap in spite of price supports. Most industrial workers do not realize that in spite of higher prices, food purchases take a smaller proportion of their pay checks than in 1939.

Flexible Supports Best

Our experience in the postwar readjustment period demonstrates the soundness of the position of three major farm organizations—the National Grange, the American Farm Bureau Federation, and the National Council of Farmer Cooperatives—that flexible support prices at conservative levels are better for farm people and for the nation than fixed support prices at high levels. The higher the level of guaranteed prices, the greater the stimulus to production. The greater the stimulus to production, the more rigid government controls will be necessary.

Rigid controls limit the ability of farmers to increase efficiency and to adjust production to meet changing consumer demands. Flexible support prices at conservative levels will give farmers greater freedom because rigid government controls will not be required. Unless amended, the present law gives enough flexibility in support prices in future years to permit the correction of the most serious weakness of this program.

EDITOR'S NOTE: To do this, administrators must pay less attention to politics and more to economics.

Until greater over-all economic stability is attained, government price-support programs will probably be continued as insurance against severe losses due to unfavorable conditions beyond farmers' control; but they are not a substitute for high demands from consumers employed at good wages. Flexible price supports can cushion the shocks of a recession, but over several years farm prices will depend primarily on the general price level and the buying power of consumers.

When the national economy is operating at a high level, support prices should not be so high as to require rigid government controls or dumping operations or continuing large appropriations. Farm prices and incomes depend largely on the general level of prices, employment and production, and not on any agricultural program.

Agriculture cannot win, and everyone would lose, in a program to increase prices by restricting production. It is impossible to legislate prosperity for agriculture or for any other industry.

Meat animals, especially beef and lamb, have been the highest priced group of farm products for several years. Their high prices have been due to heavy demands from prosperous consumers, and not to price-support programs.

The United States has been passing through a period of overemphasis on food surpluses and on government price supports, due largely to the price readjustment from postwar scarcities and inflation and to fear of another price collapse like 1920-21. The phenomenal increase in food production resulting from improved practices and favorable weather has been used largely to feed more people better. Families whose purchases were formerly limited by low incomes have been able to buy more meat and other choice foods.

More Food For More People

This country has had a phenomenal increase in population as well as in food production. The increase in population from 1940 to 1950, more than 19 million, was more than double the growth in the decade of the thirties. As population continues to increase, the United States must have still higher production or larger imports or a less desirable diet.

There is ample room for any prospective increase in food production in providing an adequate diet for every person in the growing population of the United States. In spite of our high standard of living, we have never even approached this goal. Better diets will contribute to the health, happiness and welfare of consumers. They mean also increased use of protective foods—milk and dairy products, meat, eggs, fruit and vegetables, and these products require larger use of agricultural resources than cereals in their production.

—A.A.—

POTATO-VEGETABLE MEETING JANUARY 3-5

"A Better Job of Merchandising" will be the general theme of the joint convention of the Empire State Potato Club and the New York State Vegetable Growers' Association in Buffalo, Jan. 3-5.

Nationally known speakers will discuss the problems of reconciling high costs of production with a declining price level, and of finding new markets for surplus crops such as potatoes. Topics to be discussed at the general sessions include:

The new social security law and its effect on the New York vegetable and potato industry, by William G. Flore, Internal Revenue Service, Buffalo; the research program in vegetable crops at Cornell by Dr. H. C. Thompson; panel discussions on radio and television as marketing aids; packaging and anti-faciling law; new transportation regulations and problems; and potato research findings.

The potato surplus problem will be discussed by Kris Bemis of the United Fresh Fruit and Vegetable Association, Washington, D. C. Both potato and vegetable growers will hold business sessions and elect directors.

Willard Allen, Waterville, is chairman of the potato show, and general arrangements are in charge of Carleton Raines, manager of the Niagara Frontier Market.

BABCOCK'S

HEALTHY CHICKS

MAKE GREAT LAYERS

Babcock's White Leghorn Pen which won the 1950 Storrs, Conn., Test.

HIGH PEN AT STORRS: This year we realized an ambition of many years' standing. We won first all breeds at the Storrs, Connecticut Egg Laying Test which is the oldest and most famous official egg laying test in America. Winning it is a feather in our cap. This is the first time since 1942 that the Storrs Test has been won by White Leghorns. The pullets in this pen, by the way, were all out of pullet breeders—not old hens. They did much better than we thought they would. Their record: 3,899 eggs and 4,124.5 points.

OTHER RECORDS GOOD: Our other 1950 records are good, but not outstanding. Our Leghorns placed fifth or better in every test entered. They placed close to the top on both Poultry Tribune and American Poultry Journal trophies. We do not have figures on these as this is written. Our Leghorns won the profit class at California in 1949, and stood second at end of August this year.

HIGH LEGHORN PEN AT GEORGIA TEST: This is the fourth time we have won high Leghorn pen at the Georgia Test.

HIGH CONTEST PEN ALL-TIME —ALL BREEDS: Our Western New York Leghorn pen of 1944-45 still holds the all-time World Record, 4,057 eggs and 4,336.25 points, for all breeds—all tests.

We Hatch the Year 'Round — We hatch White Leghorns, Red-Rock Cross, Rhode Island Reds, and Barred Rocks. Own

two hatcheries, with 600,000 egg capacity, three poultry farms and 15,000 breeders. We also carry on a complete pedigree-progeny testing program.

Readers Say— OPPORTUNITY Comes Before SECURITY

IN RECENT years, our government has been advocating more and more "security" in the form of increased social security benefits, more aid to the poor, more supervision of business, etc. To get the opinions of readers the following questions were sent at random to a number of readers:

In your opinion should our government,

(1) Feel responsible for providing jobs for citizens? In other words, is government responsible for the prosperity of the country?

(2) Guarantee security through old age benefits and in other ways to individual citizens?

(3) Actually engage in business?

(4) Provide financial aid to states with taxes paid by all of us for such things as education, old age relief, etc.?

Most of the answers to these questions were brief and gave a definite "no." There were, however, some answers with qualifications, and a couple who said "yes."

J. A. Blakeslee of Newton, N. J., says "yes" to the first two questions and follows by saying that the government should engage in business "only when business doesn't meet the public need." He adds, "Yes, government should provide financial aid to states, because the country is responsible for the education of its people and also for their well-being."

A somewhat similar opinion was given by Roger Gleason of Groton, N. Y., who said "No" to the first question adding, "However, to a certain extent I feel that the government must provide some cushion against really hard times." Relative to guaranteeing security, Roger says, "to a certain extent where private resources are not available or are inadequate." To the third question relative to government in business, his answer was "Yes, in fields where private industry has fallen down," and to the fourth point, "Yes,

some states are poorer or sparsely populated and can't really provide a good educational system. The government has to step in because local government cannot and will not attempt to do the job."

In most of the cases, the answer was "No" to all four questions. Here are some interesting comments:

Louis Duncel of Oxford, N. Y., says, "There are plenty of jobs available if workers would not expect so much pay per hour. Let each state take care of its own education and relief needs. We need less controls. I believe our government could be run on a fraction of the present cost."

Francis Alvord of Friendship, N. Y., comments, "We think the tendency now is for everyone from childhood to old age to expect to be taken care of, instead of depending on their own hard work. This makes for a 'soft' people."

Julius Gordon of Lawyersville, N. Y., says, "The government could use the building of public works such as 'roads' as a sort of governor to slow down booms and depressions."

John Perry of White House Station, N. J.: "The government should not provide jobs by works programs such as WPA, but only by running its own business in an economical way. Guaranteeing security makes too many government jobs. Government should not engage in business when it competes with private business. Federal financial aid to states is all right in case of disaster, but otherwise some states are being subsidized, which is pure paternalism."

In addition to the quotations given, we want to express our appreciation to the following who replied to our questions: Clarence Rea, Cambridge, N. Y.; J. D. Ameele, Williamson, N. Y.; W. A. Dean, Copake, N. Y.; G. D. Shultes, West Berne, N. Y.; Edwin Johns, Royersford, Pa.; Kenyon Parson, Sharon Springs, N. Y.; Furman Huff, Honeoye, N. Y.; Everett Shadie, Hillsdale, N. Y.

The Guaranteed Life

By Maxwell Anderson

A GOVERNMENT is a group of men organized to sell protection to the inhabitants of a limited area at monopolistic prices." So said Peter Stuyvesant in *Knickerbocker Holiday*, and so I believe now. In other words, there's no such thing as a "good" government; one and all they partake of the nature of rackets. But government is better than anarchy, and was invented as an insurance against anarchy. And some kinds of government are far better than others. Specifically, our American experiment has worked so well that we can point to it as one of the most successful in the history of the world, if not the most successful.

The Constitution is a monument to our forefathers' distrust of the state: and the division of powers among the legislative, judicial and executive branches succeeded so well for more than a century in keeping the sovereign authority in its place that our government has become widely regarded as a naturally wise and benevolent institution, capable of assuming the whole burden of social and economic justice. But there was nothing natural or accidental about it. Our government has done so well because of the wary thinking that went into its making.

Life is infinitely less important than freedom. A free man has a value to

himself and perhaps to his time; a ward of the state is useless to himself—useful only as so many foot-pounds of energy servicing those who manage to set themselves above him. A people which has lost its freedom might better be dead, for it has no importance in the scheme of things except as an evil power behind a dictator.

In our hearts we all despise the man who wishes the state to take care of him, who would not rather live meagerly as he pleases than suffer fat and regimented existence. Those who are not willing to sacrifice their lives for their liberty have never been worth saving. Throughout remembered time every self-respecting man has been willing to defend his liberty with his life.

If our country goes totalitarian out of a soft-headed humanitarian impulse to make life easy for the many, we shall get what we vote for and what we deserve, for the choice is still before us, but we shall have betrayed the race of men, and among them the very have-nots whom we subsidize. Our Western continent still has the opportunity to resist the government-led rush of barbarism which is taking Europe back toward Attila, but we can only do it by running our government, and by refusing to let it run us.

SURPLUS CHICKS, C.O.D. New Hampshires, Barred Rocks, White Rocks and Heavy Assorted 25- \$3.50; 50-\$5.50; 100-\$10.00. Prices at Hatchery.

A Poultry Utility Unit

By L. E. Weaver

THE boys at Penn State are doing a fine job of pioneering in the field of equipment to save labor and time in the poultry house. I may be wrong, but I give them credit for originating the automatic mash feeder idea. Now they have gone several steps further, all in one jump. Dr. G. O. Bressler from the poultry department teamed up with Prof. A. S. Mowery and D. C. Sprague and came up with what they call a "poultry utility unit," and they had it on display at the recent NEPPCO exposition.

Imagine a wire-covered roosting pit about 18 inches high extending down the center of a long pen. Then picture an automatic feeder, as long as the pit, extending down the middle of this roosting pit at the same level as the roosts. Now picture an angle-iron water trough running along just above the feed trough. Below all this, on the floor of the pit, something new has been added. It is a mechanical cleaner. All these are combined to make the "utility unit."

Here is how it works. Water that is spilled as the hens drink becomes wet mash in the feeder just below and is

readily eaten. Wasted mash and droppings (all of them at night and probably half of them by day) fall into the pit. Once a day, by pulling a lever, you start the cleaner and it works the droppings to the end of the pit in a few minutes. Then you turn off the cleaner and remove the droppings by trap door, wheelbarrow or what have you.

Here is what you have accomplished. You have relieved your ventilating system of the necessity of carrying off about 50% of the daily moisture output of the flock. You took it out with the droppings. Furthermore, a great deal of moisture normally deposited in the litter has never been there under the new set-up. It has gone into the pit because the feeder and water are over the pit. Thus the floor litter remains much dryer, and your eggs much cleaner—a great time-saver.

These Penn State boys admit that the unit is a bit on the clumsy side, and can stand some refinement, which they are planning to give it. I predict that before long a lot of modern poultry plants will be using poultry utility units. Dr. Bressler says it is possible to build them at home.

↑ Poultry "utility unit" designed and built at Pennsylvania State College. In the foreground is the mechanism that operates the cleaner blades. Also shown are the automatic mash feeder and roosts over the screened pit.

↓ The pit with wire screen removed. The cleaner blades are in the horizontal position for the return stroke. Note the angle-iron water trough above the mash but inside the protective grill.

Hall Brothers SEX-LINKED HALLCROSS PULLETS

OFFICIAL CONTEST RECORDS SHOW EVER-INCREASING EGG PRODUCTION!

Maine Egg-Laying Tests 1949-1950. Our Sex-Linked Hallcross Pen completed the year with a record of 3438 eggs, scoring 3682 points... an average of 264.4 eggs or 283.2 points per bird.

Put your money, labor, feed and planning into chicks that prove themselves time and again to be top profit producers! Sex-Linked Hallcross Pullets are not only consistent winners... but their margin of superiority grows and Grows AND GROWS!

Look at the records! 5 years ago at Maine, Hall Bros. Sex-Linked Hallcross Pullets not only established an all-time high Pen and Individual Bird record... they laid an average of 247.2 eggs per bird. This year at Maine the Pen of Sex-Linked Hallcross Pullets laid 264.4 eggs per bird or nearly 17.2 more eggs per bird than five years ago.

Now consider the fact that the national contest average was 211.6 eggs or 219.2 points per bird last year and you'll see that you can't ask for more in the way of a profitable bird than Hall Bros. Sex-Linked Hallcross.

Must be why Sex-Linked Hallcross Pullets are considered the leading birds today for commercial egg production.

ORDER SEX-LINKED HALLCROSS PULLETS RIGHT NOW!

Hens that lay more and larger eggs when prices are high pay big dividends. So, ORDER EARLY for extra profits from extra-profitable Sex-Linked Hallcross Pullets.

We hatch chicks from 6 PUREBREDS and 4 HALLCROSS... every chick with a bred-in profit record on both sides.

See your Hall dealer today or write direct for catalog and prices.

HALL BROTHERS HATCHERY of Wallingford, Conn. is justly proud of a pen of sex-linked pullets that set a world's record for crossbreeds at the Maine laying tests. The birds laid 3,438 eggs for 3,682 points, an average of 264.4 eggs per bird.

ROHM and HAAS of Philadelphia, Pa. recently purchased a 211-acre farm in Bucks County, Pa. for use in additional experimental field research on agricultural chemicals.

A new sprinkler irrigation pump bulletin is available from MARLOW PUMPS of Ridgewood, N. J. It was compiled to offer farmers a complete but compact description of centrifugal pumps for sprinkler irrigation systems.

THE BEACON MILLING COMPANY of Cayuga, N. Y. has added another poultryman to its staff for the service of poultry raisers. He is Robert E. Miller a native of New Jersey and a graduate of Rutgers. He has been working for Beacon since July, 1949. His promotion will bring to four the number of men assisting Vice President C. E. Lee in the Poultry Department.

THE TOBACCO BY-PRODUCTS AND CHEMICAL CORPORATION, 401 E. Main Street, Richmond, Va., has a rat and mouse killer containing the new product "Warfarin." This cannot be detected by rats. It kills slowly as the rats bleed internally.

ARMOUR & COMPANY, Chicago, Ill., reports some interesting tests on the use of hormones on sheep to cause them to reproduce twice a year. The tests are encouraging and use of these hormones may become standard practice.

THE AMERICAN ABERDEEN-ANGUS BREEDERS' ASSOCIATION of Chicago 9, Ill., has an extremely interesting booklet which is called "Blacks Breed Better Beef." It is beautifully illustrated, and in it you will find an interesting explanation of the good points of Aberdeen-Angus beef cattle. It is yours for the asking.

One of the newer cow feeds on the market is Florida citrus pulp. You will be interested in reading more about it in an illustrated folder which will be sent on request by CITRUS PROCESSORS ASSOCIATION, P. O. Box 188-A, Lakeland, Fla.

"Care and Feeding of Dairy Cattle" is a booklet which is yours without cost on request to the DAIRY ASSOCIATION COMPANY, Lyndonville, Vermont.

One of the finest sources of information about meat curing is contained in a booklet entitled "Home Meat Curing" published by the MORTON SALT COMPANY, Box 781, Chicago 90, Ill. Because of the high cost of preparing and printing it, there is a small charge of 10 cents per copy. When you write, ask also for a new, free folder which is entitled "Your Home Freezer."

Mr. C. S. Johnson, vice president in charge of research in products, is leaving the RALSTON-PURINA COMPANY to become director of "A Program of Progress" of the Presbyterian Church. Mr. Johnson has been associated with Purina since 1927 and vice president since 1943.

SWIFT & COMPANY, Chicago, Ill., call attention to a new method of selecting beef cattle herd sires. Briefly it is to weigh bull calves periodically and to choose the ones which gain most rapidly.

A new edition of the Massey-Harris Self-Propelled Corn Picker catalog is off the press. It is printed in color and gives a complete description of the picker. A copy will be sent you if you will send a request by post card to the MASSEY-HARRIS COMPANY of Racine, Wisconsin.

"Tex—The Story of A Champion Calf"—a 30-minute, 16 mm color sound film produced by the Texas Company—presents the story of the fun and profits of a 17-year-old farm boy (a member of both 4-H and FFA) in his efforts to raise a champion calf. A limited number of copies are available on loan for farm meetings. Write J. M. Gregory, THE TEXAS COMPANY, 135 E. 42nd St., New York, N. Y., or contact the local Texaco Man for a showing.

The coupon habit is an excellent one to form. Filling out coupons contained in AMERICAN AGRICULTURIST advertisements will bring you a variety of information which will be accurate and helpful. Filling out such coupons does not carry any obligations. Advertisers are always glad to send catalogs or booklets on request.

If you live in New York or western Vermont and are interested in breeding cattle artificially, you can get complete information by dropping a postcard to NEW YORK ARTIFICIAL BREEDERS COOPERATIVE, Box 528-A, Ithaca, N. Y.

Independently adjustable right and left scoops permit cleaning both gutters in the same direction with this mobile barn cleaner just announced by JAMES CUNNINGHAM SON & CO., of Rochester, N. Y.

Who Wants Profits? - Who Gets Them?

By L. R. BOULWARE

Vice President, General Electric Company

OWNERS? The people who have risked their savings in a business venture certainly want profits to repay them for the use of their money and for the risk they take.

But they don't always get profits. Ours is a profit and loss system. All

L. R. Boulware

too frequently a business hasn't anything left after paying all expenses.

But when there are profits, who gets them? Wall Street? The "filthy rich?" Let's see.

There are about 13 million stockholders in just the 428 larger companies which report their ownership. The hundreds of thousands of other corporations which do not report their ownership have entrusted to them the savings of further millions and millions of stockholders.

Two of every three dollars of dividends from these companies go to people who have less than \$100 a week total income from all sources and who, after personal income taxes, retain 83 per cent of all dividends paid by corporations.

Any of these dividends that go to that rabble rouser's delight — the "filthy rich"—are promptly taken by federal income taxes averaging about 80 per cent. Actually, after income taxes, the "rich" get to keep only 4 per cent of all dividends paid by corporations.

There are an additional 10 million owners or "proprietors" of businesses which are not incorporated. These, too, are trying to do better than break even — trying to "make money."

There must obviously be some duplication in the above numbers. Once a fellow develops the saving habit, he may not invest in just his own business or in some one corporation's stock, but may think it prudent to spread the risk of his savings over two or more ventures and thus not have all his eggs in one basket. But still there must be easily better than 25 million individual citizens who are risking past savings or a portion of present income in one or more business ventures in the hope of profits.

But still more people are interested in profits.

SAVERS? There are 78 million—three out of every four adults in the U. S.—with life and other insurance policies. The funds of insurance companies are to a large extent risked with business concerns or in investments directly affected by whether or not certain businesses, or businesses on the average, are operating profitably. Profits help make insurance safe and low in cost.

There are around 80 million citizens who own government bonds directly. About one-third of the assets of the insurance companies and of the banks are in government bonds. There are 70 million people with savings accounts, millions more now on pension or contributing toward a pension, and other numberless folks with future income in fixed amount of dollars. All these are interested in keeping the dollar good . . . keeping it from dropping in buying power as it steadily has in 15 of the past 17 years. Profits are one of the strongest agencies to prevent this

damage to the value of money and hence to such savings.

GOVERNMENT? Uncle Sam is greatly interested in profits—in fact, largely dependent on business profits to keep the government sound and to keep the economy free.

Government income is high and its expenses for various kinds of aid and relief can be low when most businesses are profitable and only a minority are losing money. Profits provided between one-third and one-half of government income last year.

Profits are down this year, the relief load is up, and the government is already going to "deficit financing" which simply means it is living beyond its means and damaging again the value of everybody's income and savings.

Profits shared, in reason, with the government provide federal income that results not from higher prices to citizens but from the ability and energy applied by those managements able to operate within a given market price which is not profitable for others. Government likes such income.

Government has liked it too much. Profits have been taxed to the harm of the whole country. Company profits have even been taxed twice—as business earnings and again as dividends. This has prevented anything like the full progress possible.

Our standard of living is raised only by putting profit and other savings into new designs, equipment, and methods. The increase has averaged 3% over the past 40 years. Our standard of living cannot be raised 10% or 15% or 18% in a year by trick legislative or other such means.

If our country is to progress faster, there must be renewed hope of profits to act as an added incentive to competition. And the profits needed for progress will come as the reward to those who succeed in operating efficiently within prices that are attractive to the public on products the public wants.

EMPLOYEES? The well-being of employees is largely dependent on profits. Jobs are steady in times when most businesses are making a profit. Jobs are uncertain in times when most businesses have losses or even shrinking profits.

How much can be bought by employees with their pay is dependent on how steadily profits are reinvested in the means by which each of the 62 million of us in the work force can do more for each other with the same, or even less, physical effort.

And almost all of the savers and owners mentioned above are, of course, employees. They are more and more recognizing that there are two ways to make money. One is in return for the interest, skill, care, and effort put personally on the individual job. The other is in return for intelligent risk-taking of savings to back plans of a management thought likely to make a profit. One is pay for the work the employee does himself. The other is pay for the work his savings do.

Who wants profits? . . . Who gets them? . . . Who profits from profits? . . . DON'T WE ALL?

"One of the things we have to be thankful for is that we don't get as much government as we pay for."

Hawley Re-elected President N.Y. Farm Bureau Federation

THROUGH resolutions approved at its annual session at Syracuse, the New York State Farm Bureau Federation stated its position by favoring:

A continued ban on the sale of yellow oleo "until the public can be protected from fraud."

A plan for extensive farm machinery exhibits at the 1951 State Fair.

Support of "Milk for Health, Inc." by every New York dairy farmer.

Adequate U. S. defense on a realistic basis.

The reduction of unnecessary government spending, including unproductive spending in agriculture.

Development of monetary policies to bring maximum stability in the general price level.

Ear-marking, progressively, the revenue from the gas tax and motor vehicle licenses for highway purposes.

Provision of adequate funds to finance a 10-year town road improvement program.

Strict enforcement of the maximum weight provisions on motor trucks.

Legislation to create a regional market authority in Rochester.

A thorough study of line fence legislation by the temporary legislative commission.

The Federation opposed:

Covering of employees of the New York Milk Administrator's Office by Civil Service.

Artificial rainmaking without adequate safeguards.

Support prices for farm products at high levels.

The financing of highways by bonds.

The members of the Resolutions Committee, who met early and did a remarkable job in presenting the resolutions, were: Chairman, vice president Don J. Wickham, Hector; Lawrence Draper, Geneva; Philip Craine, Red Creek; Amherst Davis, Mt. Sinai; David Nesbitt, Albion; Abram Moll, Williamson; James Fife, Madrid; Lisle Hopkins, Bath; Varick Stringham, Wappingers Falls; and Morton Putnam, Johnstown.

Officers Elected

Warren Hawley was re-elected to a 2-year term as president of the Farm Bureau Federation. Other officers re-elected were: Donald Wickham, Hector, vice president; Marion Johnson, Williamson, treasurer; E. S. Foster, general secretary; and C. K. Bullock, associate secretary.

Directors re-elected for 2-year terms were: Hawley, Wickham, Jacob Pratt

of Schaghticoke, and Harold Simonson of Glen Head. Re-elected for 1 year were: Harold Cowles of Ashville, Johnson, Newell Hutchinson of Heuvelton, and Stanley Earl of Unadilla. The new directors elected were Harry Converse of Deansboro and Howard Cobb of Greene.

Wilford Adams of Dexter was elected president of the 4-H Federation to succeed Kenneth Stone of Clyde.

Officers of the State 4-H Council were elected as follows: Edwin C. Haddock, Hammond, president; Charles Carlson, Sinclairville, vice president; Richard Couser, Florida, treasurer; Miss Marilyn Cowin, Stillwater, corresponding secretary; Miss Joyce Woodruff, Copenhagen, recording secretary; and Miss Violet Hayes, Penn Yan, editor-in-chief.

Speakers

Senator Irving Ives of Norwich was the speaker at the annual banquet. He urged a realistic approach to our problems, both foreign and domestic, including a strong foreign policy backed up by adequate force and strict economy at home. He emphasized the necessity of weeding out communists, if any, in government, revamping our aid to Europe and correcting our outrageous subsidy system. He ended by emphasizing the importance of moral principles in maintaining our strength.

Romeo Short, vice president of the American Farm Bureau Federation, warned delegates that farmers must speak for themselves rather than allow government officials to become the voice of agriculture.

President Warren Hawley in his annual address declared that government is attempting to strangle our liberties as free farmers. He emphasized the need of a more stable price level and the need for a permanent formula for pricing milk. In closing he warned delegates of the so-called "security bug," saying, "Let us keep our own house in order and be one class of people that will give a full hour's work for an hour's pay."

A new feature at the Farm Bureau Federation meeting was a speaking contest for young men. The general subject was "Forage Crops," but it was divided into a number of topics, and each contestant drew his topic just 30 minutes before he was called on to speak extemporaneously. The semi-finals occurred Monday. Four young men were picked to compete at the finals on Tuesday morning.

Here are the winners in the Young Men's Speaking Contest at the Farm Bureau Federation meeting. From left to right: Walter Banker of Plattsburg, fourth prize; Wesley Lay of Seneca Falls, first prize; Philip Comings of Bainbridge, second prize, and James Egan of North Bangor, third prize.

Each received a certificate and a war bond from the Farm Bureau Federation.

It Pays To Breed All Your Herd To NYABC Production-Building Sires!

1. Higher Production -

Average production of 4366 daughters of NYABC Sires in DHIA herds was 11,221 pounds milk and 411 pounds fat — increase of 936 pounds of milk and 24 pounds of fat over the 1949 average production of all DHIA Cows in New York State on a comparable 2X, 305 day M.E. basis.

2. Lower Breeding Cost -

Every study made shows it costs the dairyman with 30 cows or under, less to breed artificially than to maintain his own herd sire. No bull handling problem, and less danger of disease, too, breeding the NYABC way.

3. Safer Production -

The NYABC breeding system offers better assurance of increasing and continuing good production since the entire future dairy income of a herd is not based upon the production transmitting ability of a single bull. High selection standards assure top quality NYABC sires for all members' herds.

That Is Why

33,566 New York State and Western Vermont dairymen breeding 156,012 dairy cattle* produce more milk of better quality at less cost using the 115 quality sires of five different dairy breeds whose service is available through 127 inseminating technicians working for a farmer-owned local associations affiliated with New York Artificial Breeders' Cooperative, Inc. of Ithaca, New York.

*Actual number of cattle bred artificially to NYABC sires during the 1949-50 fiscal year. For more information about NYABC service, what it means to the future of our dairy industry, and how you can use it in your herd, write today to:

New York Artificial Breeders' Cooperative
Box 528 A Inc. Ithaca, N. Y.

? What is a cow worth ?

For years farmers in the Northeast were never sure they were getting full market prices for the cows that they culled from their dairies and other livestock sold for meat. The price was determined by barter without any guide as to what the farmer should ask.

Farmers recognized this weakness in their marketing machinery, and asked their farm organizations to help them.

In 1946, five of the leading farm organizations—The Cooperative G. L. F. Exchange, The Dairymen's League Cooperative Association, Inc., New York State Grange, The New York State Farm Bureau Federation, and Producers Cooperative Commission Association—established Empire Livestock Marketing Cooperative, thus, Empire is owned by farmers through their cooperatives.

Now you know!!!

Empire's management, with a thorough knowledge of the procedures of packer-buyers and terminal markets, adapted standards for country markets that would enable farmers to have a good idea of the market value of their livestock. Three important procedures were established by Empire:

LIVESTOCK GRADING— This is a method of defining quality and condition of market livestock. All Empire price quotations are based on grades.

SELLING BY WEIGHT— Slaughter livestock is weighed on accurate livestock scales and sold by weight at Empire.

PUBLISHED MARKET PRICES— Empire prices are reported immediately through the press and over the radio so farmers know what their livestock is worth. Empire has set the pace in establishing sound marketing procedures and accurate reporting of country market prices throughout New York. It is no longer necessary for a farmer to sell livestock "in the dark".

EMPIRE LIVESTOCK MARKETING COOPERATIVE

Delivered insured, guaranteed. 20th year selling pecans direct. J. Trus Hayes, Grower, Box 1730, Dillon, South Carolina.

TIME WELL SPENT

Time taken to read the advertisements in AMERICAN AGRICULTURIST is well spent—for there is no better way to keep well informed on new things on the market, what to buy at what price and where to go to get what you want. When you answer an "ad," be sure to mention the name of

AMERICAN AGRICULTURIST

By J. F. "Doc" ROBERTS

LIVESTOCK farming is our second largest business; food production is our largest business. Fortunately neither is a giant in today's accepted sense of "big business" with its president, board of directors, general manager, stock market financing, and its thousands of employees all working for a boss. But, unfortunately, there are many who would like to be the boss of all farmers. When farmers and farming get a boss, nothing free will be left for any of us. That is the challenge today facing not only agriculture but industry, labor and the professions.

Just why any of us should be faced with that sort of a challenge is hard to figure out. I can remember my grandfather very well—yet his father pre-dated the Revolutionary War. In just that length of time free people have built the greatest, the most powerful, and the richest country in the world, with 150 million people receiving its abundance. Can we look forward to the sons of the grandsons that we now have going into the future almost as far as we have come as an independent country?

Golden Rule

Bygones will always be bygones. A minute or an hour never comes back, therefore, there is only one way we can go—forward. The problems of today are not the problems of yesterday or tomorrow. Then to be realistic we find ourselves today a people with a production of necessities and luxuries for everyone, never dreamed of by many now living. This alone demands new forward-looking ideas and plans, but does it demand change in our fundamental, moral, spiritual or social behavior or in our following of the Golden Rule? I think not.

Rich and Unhappy

We find ourselves today a rich people, discontented, frightened, too busy struggling for an elusive happiness,

YOUNG GRANGE LEADERSHIP RECOGNIZED

When the New York State Grange met at Elmira recently, Willis Simpson, Jr. of Port Jervis, N. Y. and Audrey Morehouse of Garrettsville, N. Y. were presented with American Agriculturist Achievement awards. Shown in the picture with them is Jim Hall, field editor of American Agriculturist, who made the presentation. Given to young members of several organizations each year the medals are presented as a recognition of potential leadership and are intended as an encouragement to continue along the leadership road.

Willis, shown at the left, has been master of his Juvenile Grange, flag bearer of the Pomona Grange, and he is vice president of the County 4-H Council and president of the Orange County Dairy Club.

Audrey has served as secretary and treasurer of the Juvenile Grange and is treasurer of the Subordinate Grange. She is a delegate for the local Young Co-operators, is a Sunday School teacher, and has held various 4-H Club offices and has won many prizes.

talking of peace, security and welfare, but always in terms of money, power, government, armaments and war. A deplorable situation to be sure, but isn't it a natural and normal one for any group of humans who have come so far so fast? All our troubles today stem from our inability to adjust our thinking away from material and materials. Right now we have positive proof that this is true, for our present abundance of goods is not a satisfaction or a satisfactory goal for us as human beings.

This thought is beginning to shape our future just as surely as living or life has no meaning except through faith. Industry is beginning to think in terms of human beings. Agriculture is beginning to think of food in terms of vitamins, calories, and health instead of in pounds or tons. With the start of this new thinking, the course of our future is definitely settled. Our doctors, educators and professional men are beginning to feel and, I hope, accept this idea that service to others must be their goal in the future even to a far greater degree than they have already given as a class.

The mistakes our grandfathers made

as we look back seem foolish and unnecessary, yet they moved forward. The mistakes that we are making and will make will be just as many; yet, since we are living them they seem more burdensome, and even at times a barrier against future progress. The world always has gone forward even with its setbacks.

A New World

Today, then, it seems to me we have a very clear picture of what is needed and demanded of us for this new world which is surely in the making. The day of the farmer who lived his life on his little back farm with his small family and with little contact with the rest of the world is over. The day of the industrialist counting his money and forgetting all else is over. The day of the hired hand working for his hire and forgetting or not caring about the part he plays in this world is over. The day of the educated man using his advantages for himself alone is over. While it may take some time, kings and queens, dictators, and imperialistic governments are on the way out.

Whether we like it or not, *One World* is here or about to be. We do like it although we may find it hard to live with for a while. War was never voted for by fathers and mothers at home and new ways are being devised to stop wars. Starving populations in the world are being fed and helped. Bungling mistakes and human frailty still exist but the most wonderful era in human existence is ahead. We can be glad we are here only hoping that we can help it over some of the hurdles and that we can stay long enough to see it accomplished.

Now, then, when the *American Agriculturist*, established and supported by a group of farmers, comes out with a complete issue to show the need for cooperation between the workers of this new, new world then they too, and Ed Eastman in particular, are adding their support and belief of the power and success in the application of the Golden Rule.

— A. A. —

MUTUAL HELP

The New York Artificial Breeders' Cooperative has an enviable set-up in that it is adjacent to the New York State College of Agriculture at Ithaca, N. Y. By agreement, the State College has undertaken to solve certain research problems. This research has brought improvements in methods of collecting, storing and using semen, the control of bacteria, and more efficient distribution to inseminators.

On the other hand the College has used the records on the 150,000 cows bred each year to add to their information about breeding dairy cattle.

SLOCUM FARM DISPERSAL

(A great Cayuga County Herd)
MONDAY, DECEMBER 11
10:30 A.M. — lunch served

105 REGISTERED HOLSTEIN CATTLE At the Farm 2 miles southeast of Junction at KINGS FERRY, N. Y. Routes 34B and 90, twenty miles south of Auburn and 20 miles north of Ithaca on Route 34B.

Herd T. B. Accredited, tested for both T. B. and blood within 30 days, pregnancy examinations made on all bred long enough, milkers mastitis tested.

SENSATIONAL 1949-1950 DHIA AVERAGE on 52 COWS, 2X—478 lb. fat, 13,424 lb. Milk
A 928 lb., 4.1% fat on 2 time milking sells with her daughter and granddaughter. Many other 500 lb. fat cows and up to 700 lb. on 2 time milking

Many bred to son of INKA SUPREME POSCH from 600 lb. fat dam. Majority fresh or due soon after sale. Several service age bulls including a son of INKA SUPREME POSCH. A grand array of heifer calves by noted sires from high record dams.

THIS IS A VERY CHOICE HERD — A REAL OPPORTUNITY TO PURCHASE SEED STOCK AND PROFITABLE PRODUCERS.

REMEMBER THE DATE—DECEMBER 11. Sale in large, heated tent. — Catalogs at Ringside.
ROY TUTTLE, Owner, Kings Ferry, N. Y.
R. AUSTIN BACKUS, Sales Manager & Auctioneer, MEXICO, NEW YORK.

BIG 2-DAY EARLVILLE SALE WED. & THUR., DEC. 6 - 7

Heated Sale Pavilion, EARLVILLE, MADISON CO. N. Y. which is located on Route 12-B, 10 miles south of Route 20 and 40 miles south of Syracuse, 50 miles northwest of Binghamton.

250 REGISTERED HOLSTEIN CATTLE Consigned by 100 well-known breeders from all sections of New York State, from New England, from the middle west, from Penna. and from Maryland.

FIRST DAY—WED., DEC. 6—The Invitational offering of 75 Head, all personally selected by Dr. E. S. Harrison of Harden Farms, Camden, N. Y. who travelled thousands of miles to select only the very finest — potential show ring winners, prospects for exceptionally large records, and a splendid group of very high record bulls from dams with records up to 1,132 lb. fat and 30,158 lb. milk. **THIS IS AN ELITE GROUP ALL THE WAY THROUGH**, as good or better than you will see at any State Fair.

THURS., Dec. 7—175 HEAD including 125 strictly fresh and close springers featuring the dispersal of the well-known, high producing herd of ORRIN BROOKS, MORRISVILLE, N. Y. which includes daughters of INKA SUPREME POSCH and other leading sires in the New York Artificial Association.—30 Service Age Bulls from the best herds of the East all from dams with excellent production records up to 800 lb. on twice a day milking. Come and buy your bull at this sale because the large number means many will sell at surprisingly low prices. All the offerings from T. B. Accredited herds, blood tested, many calfhood vaccinated, and all are sold to be exactly as represented.

IT'S THE MOST SENSATIONAL SALE OF THE EAST THIS SEASON. An annual event at which dairymen and breeders are always able to buy the cows breeders hesitate to sell, and they will prove highly profitable. You are fortunate in being able to buy them. Sale will start each morning at 10:00 A.M., hot dinner served at noon. Excellent trucking facilities. **IMPROVE THE QUALITY OF YOUR HERD. PLAN TO ATTEND THIS SALE BOTH DAYS.** Attractive catalogs at the ringside.

R. AUSTIN BACKUS, Sales Manager & Auctioneer, MEXICO, NEW YORK.

Protect the PROFIT POINT

To safeguard against loss of quarters, treat all teat injuries promptly.

Dr. Naylor Dilators carry antiseptics into teat canal to help combat infection and reduce inflammation. They furnish gentle, non-irritating support to injured lining and promote normal relaxation at end of teat by sustained antiseptic contact directly at site of trouble.

HERE ARE two interesting and delicious ways to serve chicken, a fool-proof baked ham recipe, and two extra-special desserts to try out. The chicken is combined with oysters in one case, and with rice in the other; both are good in entirely different ways.

CHICKEN AND RICE RING

- 1 three-pound frying chicken, disjointed
- 3 tablespoons fat
- 1 medium sized onion, chopped fine
- 1 garlic clove, minced
- 1 tart apple, minced
- 1 teaspoon salt
- 1 teaspoon paprika
- $\frac{1}{2}$ teaspoon powdered ginger
- $\frac{1}{4}$ teaspoon sugar
- $\frac{1}{4}$ teaspoon chili powder
- 1 6-ounce can tomato paste
- Few grains cayenne

Bone the raw chicken, keeping pieces as large as possible. Melt fat; cook onion, garlic and apple in fat until golden brown. Add paprika, salt, ginger, sugar, chili powder and cayenne. Cook until quite brown; add chicken; brown lightly. Add tomato paste and enough chicken broth (made with chicken bones) or boiling water to cover. Cover; simmer about 40 minutes, or until chicken is tender. Serve in rice ring. Serves 6.

CHICKEN AND OYSTER RAMEKINS

- $\frac{1}{2}$ cup butter
- $\frac{1}{2}$ cup flour
- $\frac{3}{4}$ teaspoon salt
- Few grains pepper
- $\frac{1}{2}$ teaspoon paprika
- 1 pint oysters
- 2 cups cooked or canned diced chicken
- 1 six-ounce can broiled mushrooms (optional)
- Evaporated milk
- 1 cup buttered cracker crumbs

Clean oysters carefully, removing shells and retaining liquor. Melt butter; blend in flour, salt, pepper and paprika. Measure combined oyster liquor and mushroom liquor; add enough evaporated milk to make 3 cups; add to flour mixture. Cook over low heat, stirring until smooth and thickened. Cover and cook over hot water 10 minutes longer. Add chicken, oysters, mushrooms (save out one mushroom to top each ramekin, if desired). Spoon into ramekins. Top with buttered cracker crumbs and mushrooms. Bake in moderate oven, 350° F., 20 minutes. Serves 6.

HOME-BAKED HAM

Baked Ham is easy to prepare and always popular. Place fat side up on a rack in an open roasting pan. Do not cover and do not add water. Bake in a moderately slow oven, 325° F., and allow 15 minutes per pound for a whole ham over 12 pounds in weight. Half an hour before the end of the baking period, score the fat, stick with cloves, and cover with honey, molasses, apricot jam, or brown sugar moistened with a little fruit juice. Baste once or twice during glazing period. For an attractive garnish to decorate the ham platter, fill canned peach halves with raw orange and cranberry relish.

DELICIOUS TURNOVERS

- Flaky pastry
- $1\frac{1}{2}$ cups prepared mincemeat

Roll pastry out $\frac{1}{8}$ inch thick. Cut into $4\frac{1}{2}$ -inch squares. Place a heaping tablespoonful of prepared mincemeat on each square. Fold over to form triangles. Press edges together with fork and prick tops. Bake in hot oven, 425° F., 18 to 20 minutes. Makes 12 turnovers.

MOCHA REFRIGERATOR CAKE

- packaged 8-inch sponge cake layers, or equal amount of homemade sponge cake
- 1 cup strong coffee
- 1 cup heavy cream, whipped
- 1 package chocolate pudding mix
- 1 cup evaporated milk
- Walnut meats

Split sponge cake, making four thin layers. Prepare pudding mix, using coffee and evaporated milk, combined, the liquid. Press one of the cake layers

for
Your Recipe File

into a medium-sized mixing bowl. Add one-third of the pudding, then another cake layer, and so on, ending with the fourth cake layer. Chill several hours or overnight. Unmold on serving plate. Swirl whipped cream generously on top and sides. Garnish with whole walnut meats. (If you prefer, you may use your favorite chocolate pudding recipe and substitute it for the package mix.) Serves 8.

Delicious with either the Turnovers or the Mocha Refrigerator Cake is:

HOT MOCHA JAVA

- $4\frac{1}{2}$ measuring cups hot coffee
- $4\frac{1}{2}$ measuring cups hot cocoa

Combine equal amounts of coffee and cocoa. Serve hot, but do not boil. Pour into cups. Top with marshmallows. Serves 12.

By LOUISE PRICE BELL

1 Chicken, in a ring of rice, and accompanied by hot coffee, is a hearty and delicious meal.

2 Men like Chicken and Oysters served with steaming hot coffee, so try them often.

3 Mocha Refrigerator Cake is made from sponge cake and pudding . . . easy to make and very good-tasting!

4 You'll make a hit every time you serve Mincemeat Turnovers and Hot Mocha Java.

5 Is there anything more popular than home-baked ham? Peach and cranberry garnish adds to its appearance and taste.

A PRAYER FOR SIMPLE THINGS

By Edith Shaw Butler

Oh Lord, dear Lord,
These things I ask:
A happy song
For homely task;

Vision shining
That I may see
The good things Thou
Hast given me;

Stout roof, a hearth,
A threshold wide
That welcomes friends
To come inside

For quiet talk,
A cup of tea,
Time enough
To be neighborly;

Sweet though hard-earned
Daily bread,
At night a place
To lay my head;

Rich loam, brown seed,
Joy of sowing,
And then to watch
Small shoots growing.

Oh Lord, dear Lord,
Let such things be
The birthright of all
Humanity.

Beech-Nut

Famous for Fine Flavor

Strained and Junior Foods

Widely recommended by doctors, pediatricians and food specialists for their flavor and fine food value. The flavor appeals to babies.

Cereals for Babies

Nutritious! Delicious! No cooking needed. Ready to serve with addition of milk or formula.

Coffee

Pound after pound Beech-Nut Coffee gives the same rich satisfaction. It's sample-roasted and flavor-tested.

Peanut Butter

Two kinds of Beech-Nut Peanut Butter — with fine flavor. Regular and new "Easy to Spread" — smooth and super-creamy to bottom of jar.

BEECH-NUT PACKING COMPANY • CANAJOHARIE, N. Y.

A Big Task for HOME and CHURCH

MAKE SURE that our children have a sound knowledge of American history—an awareness of our beginnings, the suffering, struggling and pioneering of our forefathers, and a home life that will nurture spiritual, mental and physical well-being."

That was the answer of Mrs. Alice B. Hiteman of West Winfield, New York, to our question, "How can American women help to keep America free and strengthen it morally?" And in that brief statement she voiced the ideas that were in about 90% of the answers we received from 72 rural homemakers of the Northeast.

Underlying almost all the answers was the feeling that we could keep free and morally strong only by a return to religion. As Mrs. Noah Van Wormer of Cohocton, N. Y., said, "The feeling of peace we all need can be obtained only by faith in God. Women, as wives and mothers, can do a lot towards directing the whole family to religion." Six hundred miles from Cohocton, on a 142-acre dairy farm at Bradford Center, Maine, Mrs. Margaret Allen took time from the task of raising their five children under 10 years old to say almost the same thing, "Women, by bringing their children up to love and worship God—and to serve Him—will make us and our children better citizens."

Save the Pennies

Lillian D. Carlin of Holmes, N. Y., told us that with living costs at an almost all-time high and taxes taking about a third of people's incomes, there has been a definite lowering in the standard of living, "especially in amusements, literature and travel." She believes a cut in government employees and abolishment of duplicating bureaus in Washington would adjust a great deal of our tax troubles, and suggests that Home Bureaus and other women's groups should set aside one evening a month for the discussion of civic programs, government programs, politics and the principles of government we want under a democracy.

She said, "America didn't get this way in a day and it will take time to get back to normal again, if we ever do. It is certain we never will until the women of the nation, especially in small communities, wake up and take interest in their government from top to bottom." Mrs. Myrtle Raughley, down at Farmington, Delaware, has the same idea for women's groups, saying "Too few people know how government functions, and if women want to keep America free they must keep abreast of the times by getting together for intelligent discussion of local, state and federal government."

Rural homemakers of the Northeast are well aware of where the money comes from for all the government programs we have today. All but 10 of the 72 we questioned stated flatly, "It comes from taxes," and one woman said, "Every time a man, woman or child spends anything, a share of it is for taxes and some of that necessarily has to leak away as it goes through Washington channels." Mrs. Vernon Bussim of R. D. 1, Montpelier, Vermont, believes the money comes from taxpayers, doesn't want socialized medicine, but says she doesn't want any cuts in present services because "We have few enough services on the farm as it is. We pay high taxes and what we get back in old age, compen-

sations, hot lunches, supports on prices and hospital aid is what makes democracy run. We give that others may live decent lives but I wonder if it isn't done so a few can make money on projects—what we need is not cutting services but good money handlers—someone who knows what money means, how hard it is to get."

Stop Handouts

But Mrs. Bussim is in the minority. Mrs. P. T., a New York farm wife, believes exactly the opposite. She'd like the government to do away with all the handout programs including "all the unnecessary government agencies, costly surveys, farm subsidies and so forth." While not all the women would make such a clean sweep, many agree with Mrs. P. T. on a lot of things. Interestingly enough—and I think this is because American rural folks are naturally kind and sympathetic with the old and needy—many of the women told us they would not vote for government officials who want to cut down amounts paid people on welfare or for old age and who want to do away with government loan agencies for homes and farms.

Elinor W. Arnold of Stanley, N. Y., wants "A thorough weeding out of bureaucratic groups to prevent duplication of duties," and says the family unit is the one basis for freedom here and abroad. She says the American mother who goes out to work is too busy and too diversified to do a good job morally strengthening her family "when the god she worships by her actions is Mammon. Our standard of living has come to mean the number of modern work-saving devices in our kitchens, the expensive impedimenta of modern living, rather than the cultural, religious, healthful and esthetic values.

Agreeing somewhat with Mrs. Arnold is Mrs. Eugene Harris of Milan, Pennsylvania, who says, "Mothers of young children should be encouraged to stay at home instead of working." Two of the many New England women who helped with these questions don't mention mothers not working, but they do emphasize the need of properly bringing up the young 'uns—Mrs. John Abbott of Bellows Falls, Vermont, says, "Women can help by proper example and instruction of the young and by promoting church attendance and activities," and Mrs. Calvin Boynton of Readfield, Maine, answered with, "By teaching their children respect and fear of God; tolerance, mercy and strength of character."

"Going to the polls and voting intelligently," is the advice of Mildred Wright, R. D. 3, Middlebury, Vt., to women who want to keep America free and strong. She believes that women's groups could teach the need of voting for the "better man" and not just "politics" and says that women could be made interested enough to want to vote. Mrs. Charles M. Barton of Claremont, New Hampshire, also believes that more discussion of general current events would be helpful to women who want to do their part, and also says that we would have "less welfare and stop making lazy Americans."

Mrs. Alice Blackwood of Washington, N. J., who is chairman of the New Jersey Grange home economics committee, wants the government to "quit all socialistic programs and subsidies and allow counties and states to care for their own sick and aged." Also taking exception to bureaucratic tendencies are Mrs. Wells Aldrich of Sauquoit, N. Y., and Mrs. Laura C. Hunt of Freeville, New York. They both regret the "overlapping" of government agencies, the unneeded help and the lack of standardization in equipment for government use. A Massachusetts woman, who wants to sign herself just Mrs. L. R., says, too many people in government "pretend they work."

Mrs. W. R. Van Sickle of Cayuga, N. Y., who submitted the poem, "Uncle Sam" on this page, had a simple answer for the women of America. She said, "Women can help best by knowing we are all 'Uncle Sam'." Mrs. George L. Dewey of Canandaigua, N. Y., had an even briefer—and certainly different—answer, "Drink less liquor and quit smoking cigarettes!"

Debt Enslaves

Another woman who doesn't want her name printed asks, "How can we keep America free if we are so overburdened with debt?" She says, "It seems to me to be a vicious circle; more people want more money. Those who can't or won't earn it are given it outright, which means someone must work that much harder to pay the taxes to support more people who feel they aren't getting a fair deal. The support prices are an example of it and welfare is another, even though some welfare is almost a necessity."

At Lakeside, Connecticut, Mrs. Janet Stoddard stated that she had one thing

Uncle Sam

By Francis G. Blair

You ask me who is Uncle Sam.
I modestly reply, I am.
These hungry urchins meanly dressed,
These mothers suckling babes at breast,
These traffic cops along the street,
These rushing crowds on eager feet,
These thousands caught in fortune's jam—
All these and you and I, are Uncle Sam.

All farmers working in the field,
All bankers making dollars yield,
All those who teach or preach or pray,
All honest workers night and day,
All mountebanks who cheat and sham—
All these, and you and I, are Uncle Sam.

But pioneers on land and sea,
Unnumbered millions yet to be
Of noble men who work and plan
To build and guard their native land;
Who daily do their civic share
Unflinchingly and unaware
Of those who praise or those who damn—
All these, and you and I, are Uncle Sam.
—Sent by Mrs. W. R. Van Sickle, Cayuga, N. Y.

especially bothering her: "In one breath people say government is getting too strong and in the next they expect it to breathe for them. If people would only get busy and work instead of wanting more and more money for less and less work, they'd be doing something."

Kathryn B. Norton of Angelica, N. Y., says, "Many feel that facts about Christianity shouldn't be published in the papers for fear of offending someone. But any true Christian won't be offended and the others will be made to think and see what they are missing in this short worldly life."

In addition to those we have already quoted, the ladies in the following list, and many more who asked not to have their names published, answered our question about a free and morally strong America.

Mrs. Harold L. Donner, Lounsberry, N. Y., Miss Alice Green, Chateaugay, N. Y., Miss Lilla Rogers, South Royalton, Vt., Mrs. Marion Sargent Connor, Heniker, N. H., Mrs. Sinclair Ward, Franklin, N. Y., Mrs. Jacob F. Pratt, Schaghticoke, N. Y., Mrs. W. R. O'Dell, Walton, N. Y., Mrs. George Hager, Masonville, N. Y., Mrs. Kenneth L. Wells, Sr., Riverhead, N. Y., Mrs. Harold Tripp, Dryden, N. Y., Mrs. Jobee E. Farlee, Lambertville, N. J., Mrs. Ruth C. Dennis, Jasper, N. Y., Mrs. Roy J. Estey, Hinesburg, Vt., Mrs. Lee Martin, Lisbon, N. Y., and Mrs. Mary Tompkins, Carmel, N. Y.

Many other women, like Mrs. Walter D. Kenyon, Ashaway, Rhode Island, who said, "Women can help make a nation strong by exemplifying the highest ideals of womanhood in everyday living," certainly had religion in mind, I am sure.

A Mighty Chorus

We wish that we could quote at length from all the opinions because, as Mrs. John Brock of Skaneateles, N. Y., said, "American women's voices united make a mighty chorus."

To all the women listed on this page we say "Thank you." To the following we can only offer our apologies for lack of space to use your exact words, but we believe you will agree with us that much of what you had to say was in the minds of those we did quote:

Mrs. Margery A. Blakeley, East Aurora, N. Y., Mrs. J. K. Butler, Bernardston, Mass., Mrs. Austin Warner, Calverton, N. Y., Mrs. H. Deighton, Callicoon, N. Y., Mrs. Ansel Harris, Auburn, Me., Mrs. Ralph Baraw, Johnson, Vt., Mrs. Fred H. Snyder, Churchville, N. Y., Mrs. Charles Huff, Moravia, N. Y., Mrs. Norman Aikens, North Clymer, N. Y., Mrs. Harry Aikin, Lockport, N. Y., Mrs. Harold Lave, Ithaca, N. Y., Mrs. John Harvard, Skaneateles, N. Y., Mrs. Richard A. Rogers, Olean, N. Y., Mrs. James H. Stone, Marcellus, N. Y., Mrs. Edith Robbins, Portland, Me., M. Chasse, Ackland, Me., and Mrs. Harry Perry, Port Jervis, N. Y.

Here are the answers from 72 women whom we asked

Would You Vote for Government Officials?:

	Yes	No	Not Sure
..Who were opposed to socialized medicine	63	3	6
..Who want to cut down amounts paid people on welfare, old age, etc.....	21	34	12
..Who want to do away with government loan agencies for homes, farms, etc.....	25	36	11
..Who want to stop ALL support prices.....	50	15	7
..Who want to stop PMA plan of payments for lime, ditches, seeding, etc.....	30	22	13
..Who want to eliminate unemployment insurance	36	25	7
..Who want all communities to pay for their own libraries, hospitals, etc.....	21	24	11

"I Believe In GOD, the Father Almighty"

By GEORGE D. TAYLOR, Stamford, N. Y., Farmer

IN A recent Sunday morning I stood up with the congregation in church to recite the Apostle's Creed, and the first seven words, "I believe in God, the Father Almighty" struck suddenly and clearly, like a flash of light, upon my consciousness.

I am a farmer and, as I write this, a look out of the window discloses no moving thing except tree branches. Dead winter is upon us. But I know that under the snow, in the soil, the seeds and the roots lie dormant, and that in each one, somewhere unseen and unseeable, is the germ of life. I know that the lowly groundhog lies hibernating in his safe burrow below the frost line, and I know that the beautiful speckled trout are secure in their deep seclusion under the ice.

I know, too, that with the warm sunshine of March and the April showers will come the evidence and the motion of life. I have picked the earliest May flowers in the woods during the warm days of maple sugaring weather. With the snow still lurking in the fence corners, I have heard the shrill peepers in the swamp on a balmy April evening; and a few evenings later, the hoarse enthusiasm of the bull frogs in a grand male chorus. Bare-handed, in early May, I have snared the suckers as they swam desperately up the brook in their eagerness to spawn. I have watched the dead brown grass in the pasture and in the meadow turn color gradually, bursting forth at last full green and lush. And a little later, as the soil is warmed through and softened by rain, I have seen it receive the seeds and the seedlings from my hand, with the assurance that a crop will grow. It is because all these taken together, demonstrate a conscious, orderly arrangement that I believe in God, the Father Almighty.

I have not chosen to make this declaration because it is peculiar to me, for I know I am joined in the conviction by most people who read what is written here. I have chosen it because in spite of the fact that, as a farmer, I have personally encountered the raw, rough, blunt resistance from the impact of evil things in nature, I have also seen clearly, and at close range, the steady, compelling hand of Providence carving out continuity for me and mine and for mankind.

I am a direct lineal descendant of the Pilgrim Elder, William Brewster, whose hand drafted the opening salutation of the Mayflower Compact — "By the Grace of God, Amen." And my heritage runs back through five generations of determined plodding farmers, working the very New York State land on which I live.

I was born in the house built by my great-grandfather more than 100 years ago. I still live in it. I have been

forced to get my living by digging it out of the land, in competition with the woodchucks and the potato bugs and the cabbage worms and the barn rats, and in defiance of short seasons and droughts and floods and low prices.

Men take for granted the safe, sure travel of the sun and the stars in their orbits, and the orderly and regular progression of the seasons. And mostly they take for granted the provision for the continuity of all earthly life. But we farmers do not take this latter for granted. In watching the process and in implementing its event, we come to learn that certainty is no part of the plan; that the assurance of events for us—as for everyone else—is an overall assurance. Individual accomplishment is a matter of luck or skill or both. And failure comes when we have neither. We learn, literally, that "into each life some rain must fall," and also that the rain, sometimes productive and sometimes destructive, falls on the just and the unjust alike.

To be sure, I reckon a little with markets and prices and food fads, but, primarily, my concern is to avail myself of natural resources, always guarding against the unpredictable, destructive exceptions. A rain storm is not something to be looked at out of the window with a passing comment. I have planted the corn, year after year, knowing that it is possible that the seed may rot in the ground from too much rain, or fail entirely to germinate because the soil is too dry; but always hoping. I have cut down the hay to dry it before it was taken in, knowing that an ill-timed, drenching rain may ruin it before I can save it. So, while I cut it down, I pray. What farmer doesn't? I have seen an August frost shrivel my planted crops, completely snuffing out the harvest before maturity. My curses, then, are as unavailing as my prayers when I cut the hay.

But in spite of the rain, I have saved hay enough. Many crops have come through before the frost. And withal, I have survived; and my faith has built up. But to say that I believe in God in spite of my personal trials is to tell only half the story. Plenty of people in adversity believe in God.

It is this experience with the land, going on forever and inexorably, that finally points up my thesis and my belief. It is ordained that men shall be nourished by the products of the soil and that, without nourishment, men shall die. I am in the very midst of vital things, and from my vantage point I see the elemental relationship between God and man. I conclude that the nature of things is the plan for our destiny, and that adversity is deliberately designed to make us work the plan.

I believe in God, the Father Almighty.

ONLY IN AMERICA...

ONLY IN AMERICA has it been possible to build the many individual food businesses based upon the service they render to the American people.

Only in America has it been possible for people to consistently obtain the highest quality of fresh fruits and vegetables and other foods for every day consumption.

Only in America has it been possible for people to obtain the foods they want and like and still have enough money left to buy the things that industry produces. This creates more jobs and a greater demand for more foods.

Only in America is the food supply one of an adequate diet. In most other countries it is a question of any diet at all.

Only in America have producers, processors and distributors worked hand in hand to keep these food supplies flowing in an orderly and efficient manner from farms to dinner tables, thus providing the kind of teamwork which has spelled vast gains in living standards.

The men and women of A & P and Atlantic Commission Company are proud of the part they have been privileged to take in helping make America the best fed nation in the world today.

Wake Up America!

By GLORIA M. LAMBSON

President Associated Women of the Massachusetts Farm Bureau Federation

THE fourth item in the dedication of this 3rd Annual Forum issue of *American Agriculturist* interests me particularly — "Preservation of the Liberties of the American People."

Gloria M. Lambson

I've been thinking a lot about these liberties lately, wondering just what they mean to us Americans; wondering why we can't sell the spirit of them more successfully abroad — why their absolute opposite, Communism, persists in sneaking through all the barriers of dollars and of men that we erect.

I've been thinking, and I've been talking with other Americans, and I've reached some conclusions. They aren't going to look nice on paper.

I'm afraid that the average American has lost the passionate, burning belief in liberty, the *spirit*. He's still good-naturedly devoted to the *word* liberty, something he lives in the "sweet land of." Anyone who tried to take the *word* away from him would be in for trouble; but the *spirit*—well, how much will you offer? Because it is for sale, and if the bid is high enough and you talk fast enough, he won't even realize what he's sold.

Gold in the Streets

Call it moral deterioration, call it simple-mindedness; the fact is clear that many modern Americans still believe the old immigrant tale of gold in the streets (gold that someone else dug) and that the person who promises to lead them to the golden streets can justifiably take a few short-cuts across the straight and narrow roads of liberty. For gold means security, something we all strive for, while liberty means something we just naturally *have*, no matter what.

Because of this, we have to consider economic liberty, more than any other, for that's the liberty that is threatened. Freedom of assembly, unlawful search and seizure—our Bill of Rights is in no particular peril. Why should it be, when we'll willingly surrender for money what no amount of crude force could pry from our grip?

Let's see how economic liberty stands today, with several groups of Americans. How about business? Well, in some cases, there is outright subsidy, a powerful persuasive, but that is probably much less an over-all threat than the one of government-owned-and-run business. Power companies have long known this threat, and while one would be a fool to dispute the benefits brought by public power into places that private companies would decline to touch, still it's an awfully heavy sword for government to poise over an industry.

Let's not fool ourselves that business operates for charity's sweet sake, nor that many a monopolistic practice has not hidden under the cloak of free enterprise. Let's also not forget, though, that monopoly practiced by government, making its own rules, and using taxes for capital, can get awfully smelly, too.

And where stands the economic liberty of labor? The laboring-man, according to the saying, "never had it so good"—provided, of course, he does and believes as his union tells him to do and believe. Back in the days when such things happened, I remember the bitterness of workers when the boss

decided to close down the plant for a couple of weeks — without wages, of course. Nowadays, almost any paper tells of a labor leader being cheered when he closes down the plant for an indefinite period—also without wages. Labor, in all too many cases has swapped the old boss for a new one . . . and now, instead of being paid for work, the working-man also pays to work. And no matter what freedoms are abridged in the process, government smiles benignly, and only a few old "reactionaries" raise their eyebrows.

Is it any wonder that we can't easily cope with Communism abroad, though we're selling purest gold in competition with cheap brass rings? How can we sell an idea, a spirit, when we only half hold it ourselves? Could Christ Himself have convinced others of His Way if He had known and practiced only half of what He was talking about?

I haven't mentioned the threat to economic liberty of professional people and farmers. You know as well as I that it is threatened, and you know in what ways. Instead, I'd like to offer an illustration from my own experience, in the person of a physician with

a large family. On the basis of his grocery bill, he thought the Brannan Plan fine. Then one day he turned over the coin—and found Socialized Medicine on the other side.

I'd like to tell every American this: when it seems to your advantage to

snip a little around the edges of someone else's liberty, remember that the next fellow might gain from a slice of yours. As in the death of a neighbor, so in the death of an economic neighbor's liberty, "Ask not for whom the bell tolls; it tolls for thee."

I'll Buy That!

By MABEL HEBEL Home Editor, *American Agriculturist*

WHEN talk was first heard this fall of higher taxes, scarcer consumer goods, and general belt-tightening, my first reaction was "Have we got to go all through that again!" I thought of the chair I wanted to have recovered, the new curtains I had been planning to buy, the new suit I had promised myself.

Mabel Hebel

I had gone all through the last war, and World War I, saving and scrimping. It was hard to begin doing it all over again. Worse yet, with higher taxes and

prices, I wouldn't be able to save as much as I had hoped to for a future rainy day. I thought critically of the peoples' money that had gone down

the drain since the war ended—the "handouts," the political cure-all schemes, the army of government workers, many of them inefficient and superfluous.

But this was something else. Over and above the mistakes and the waste, there was now the greater threat from without. It had been there all the time, but Korea had suddenly brought us to the brink of danger, and we were being asked to give up the things that money could buy to save the things that money could not buy.

I thought of the countries where freedom has been choked to death by evil leaders, where people have to speak in whispers when they criticize those in power, where schoolchildren are taught only what the political leaders want them to know—countries where violence and falsehood and fear stalk the people.

"It can't happen here," we hope. But we must do more than hope. We must make it an impossibility by our own actions, our own beliefs, our own sacrifices. I picture to myself two stores. In one are all the things that money can buy—new clothes, new furniture, comforts of all kinds, many things I don't need but would like to have. In the other store are the things that do not have a price tag on them—the things that make this country a paradise in comparison with most other countries.

I'll call these stores the Comfort Store and the Freedom Store. In the past we have been able to have the goods in both of them. Today we must choose between having all we can get of the goods in the Comfort Store, and the priceless blessings to be found in the Freedom Store.

I know there can be only one choice. When someone says to me, "Here's the principles our forefathers fought for; here is the best country in the world; here are freedom from fear, freedom of speech, freedom to worship God in your own way," I know I'll answer with a thankful heart, "I'LL BUY THAT!" Thank God, we still have the opportunity, still have a little time to work together to strengthen America and to make sacrifices to that end.

EVENING

By Nacella Young

I've tucked the children in and heard their prayers,
And kissed their small warm cheeks, and said goodnight.

I've picked up overalls, and straightened chairs,

And fixed the door to let in a crack of light.

Now I can tiptoe down the shadowy stairs

To where you sit, alone, with book and pipe.

The kitchen's warm and still, and we two sit

In tired silence, for we need no speech; I take the paper, look it through a bit,

Nor touch your hand that lies in easy reach.

So sure of love we need not speak of it, Our two hearts answer gently, each to each.

Today Well-Lived

By BETTY REID President, New York State Federation of Home Bureaus

AMERICANS seem to be very wise and clever at winning wars, but not as wise in making peace. Of course, peace can't truly be made unless it lives first in the hearts of men.

Mrs. Reid

We hear echoed and re-echoed from folks of all walks of life, "But what can I do about peace?"

Doesn't each one of us live in a home? Can you think of any better or more practical place to start building peace than in your own home? Peaceful

homes, in turn, make peaceful communities. What are nations, other than many communities in a larger and broader sense?

Home has been defined as a place "where the stomach gets three square meals a day (if you're there) and the soul receives a thousand." If we really worked at this definition, we wouldn't go too far wrong. In the first place, three square meals would certainly keep Mother out of mischief. Building strong, healthy bodies through good nutrition is really a career in itself. Peeling potatoes, scraping carrots, baking, and washing dishes every day may not seem very glamorous, yet when we think of it, a well fed family is generally a healthy, peaceful family.

A Rich Heritage

What about the part of this statement that says "home is the place where the soul receives a thousand meals a day?" This half of the definition really worries me. We have a rich heritage of spiritual teachings and values, but what good are these teachings and values if we are not living them and giving them to our children? If, for instance, the "Golden Rule" were actually practiced for a year in our homes and communities and in the world, would we need to worry about cold wars or atom bombs?

It is most important that we become an active part of our communities. Here we build our homes, earn our living, educate our children, cast our vote, enjoy our leisure and practice our religion. A portion of our Home Bureau Creed says: "To believe that one's community may become the best of communities." That belief is most important, but it is equally important to join this belief with an interested and active participation in community affairs.

We should not spread ourselves too thin, though. One person is not indispensable in all community activities. Every good leader should recognize his responsibility of training other leaders. Besides, we don't want to be like the woman who participated in many community projects and thought it would be impossible for the P.T.A., the Grange, the Home Bureau, or the Missionary Society to get along without her. However, she became ill and went to her doctor. When she complained of being run down, her doctor said, "Run down? On the contrary, lady, you're all wound up."

The World Community

I have written of peace at home and in our immediate communities; but what about the world community? Recently, I crossed more than half of the United States in six hours' flying time. Not too long ago, a friend of mine had an early breakfast in Ireland and a late dinner in Ithaca, N. Y. A man I recently talked with commutes to Germany once a month. Yes, the world itself, in its accessibility and needs, has narrowed down to our very own community.

Are we ready for this challenge? We can be ready if, first, and foremost, we care—care enough to be tolerant and understanding, not only of our own family community, but of those in our world community.

Let us remember, as an old Indian dramatist said:

"Every today well lived makes every tomorrow a vision of happiness."

Responsibility of the Colleges

IN THIS HOUR OF PERIL FOR DEMOCRACY

By Katherine Gillette Blyley President, Keuka College

THE early Americans who made their journey over dirt roads to draw up a constitution in Philadelphia had strangely steadfast hearts. They had come to their decisions slowly but absolutely. Washington, Hancock, Morris, Franklin and the rest were calmly risking, as Jefferson said, "their lives—their fortunes—their sacred honor."

They remembered as they ticked off the slow miles of the trip that there was no background of validity behind the idea for such a convention. No group before them, representing so mixed a society (which they could see would grow more polyglot with the passing of years) had ever met to compose a document which emphasized that the government derived its rights from the people. They had studied plenty of patterns which had subscribed to the opposite point of view; namely, that the people derive their rights from the government. They were knowingly risking "their lives—their fortunes—their sacred honor" for a brilliant new idea with courage in their hearts and faith in the people.

Plenty of Temptations

In this mid-century of alternate hope and fear for our democratic institutions, can this mood be revived in our youth? They are not asked to write a constitution, but their job is of no less importance to the republic. They must prepare themselves in schools and colleges, in their homes and communities, to keep and preserve their inherited liberties. They will face plenty of temptations to surrender.

As young men and women stir about in society they will come upon foreign agents, although they may not even realize it. These may appear in the factory, on the bus, at a labor meeting or a political rally. They could even turn up at one's own dinner table. They will talk the communist line and use communist methods.

More often, our young men and women will encounter the ordinary sloppy thinker who over-emphasizes everyone's natural desire for security and who has developed an easy disregard for sound fiscal policy as long as Uncle Sam is doing the spending. He may be leaning over a fence post, or standing in line to have his groceries rung up, or working on Main Street.

What is the responsibility of higher education in this critical hour? Most of the colleges of this country have their roots in the American ideal of freedom. Wherever groups of people settled, there was almost always an institution of higher learning as a testimony to man's ability to use his powers in solving human problems. I submit that one of the top obligations

of the college today is to train young men and women to be intelligent, participating citizens on the community and national levels.

A Big, Shimmering Package

Primarily, what does John G. or Mary B. need to know? First of all, they need to recognize the chief product which democracy has to sell. It is in a big, shimmering package with a lustrous label, which reads "Faith in the godlike nature, destiny and dignity of human beings." Democracy is rooted deeply in moral and ethical soil and it cannot be blown down by winds of barter for material gains or nourished by physical or mental slavery. This is a hard lesson, but it is lesson number one.

Second, John G. and Mary B. ought to be equipped with the trusty tools of citizenship. Their knowledge should be broad and deep for sound judgment; their mental processes limbered up for distinguishing the true from the false; their ability to speak and write trained for articulation. Democracy flourishes only when the individual reasons for himself and then expresses his thoughts. This is lesson number two.

Have the traditional "liberal arts," taught in the traditional professorial manner, been particularly effective in education for citizenship? It is a question for debate. If they have not, it may be because lesson three has been left under-developed or entirely forgotten. Here it is. John G. and Mary B. ought to have the right to practice citizenship while they are still students. Citizenship ought not to be left to the classroom and to text books entirely but ought to be participated in.

At Keuka College we believe this so much that each Sophomore must do field work in a community agency; each Junior and Senior is required to examine the community in which she does her vocational work for its democratic organization. The "inside" of such American activities as the Hoover Commission Office, Community Chests, Red Cross, T. B. Association, Girl Scouts, Settlements, Y.W.C.A.'s can never be learned from books.

A New Frontier

The call to college faculties is to bring the entire college program into "citizenship focus." Experience, planned and guided, is a teacher, too, and the extra-curricular area is a gold mine for teaching citizenship. But it takes work and imagination. The charts are not made nor the devices explored. Let us all, colleges and students, give to it "our lives — our fortunes — and our honor." The reward will be the preservation of freedom.

America's most popular game, the Quiz, was used by Albany County Home Bureau at New York State Fair to test peoples' citizenship I.Q. Each was asked to "fish" a folded slip of paper from the fishbowl (see picture). As the slip contained both question and answer, information was spread without any embarrassment to the one quizzed.

Free Enterprise Means Progress

THIS company was established in 1883 by men who risked their money and dedicated their labors to an enterprise for converting forest trees into useful products.

Today this corporation is making a tree serve more people, with more things, for less money than ever before, to maintain its leadership in a free, competitive field. It employs more people, pays more taxes and provides a greater measure of security and service for all who depend upon it, than at any other time, since its founding.

Oval Wood Dish Corporation

Tupper Lake, New York

Who in your family has a birthday this month?

Make your birthday gift the present with a future!

Birthday coming up for one of your youngsters? Make your gift the one that keeps on growing in value, birthday after birthday . . . a U. S. Savings Bond!

It's America's biggest bargain in gifts—always on sale at 25% off! (A \$25 bond costs only \$18.75.) And you can buy it conveniently where you work or at any bank or post office.

For birthdays, wedding anniversaries, Christmas, or any special occasion make it a habit to give a U. S. Savings Bond—the present with a future!

Why not a gift for yourself, too?

Start now to give yourself the gift of future security—start saving regularly, safely, automatically by buying U. S. Savings Bonds in your own name. Use the convenient Weekly Payroll Savings Plan where you work or the Bond-A-Month Plan where you bank.

YOUR BOND GIFT GROWS IN VALUE EVERY YEAR					
You Pay	Bond is worth				
	3 yrs.	5 yrs.	7 yrs.	9 yrs.	10 yrs.
\$ 18.75	\$ 19.25	\$ 20.25	\$ 21.50	\$ 23.50	\$ 25.00
37.50	38.50	40.50	43.00	47.00	50.00
75.00	77.00	81.00	86.00	94.00	100.00
150.00	154.00	162.00	172.00	188.00	200.00
375.00	385.00	405.00	430.00	470.00	500.00

For your security, and your country's too,

AMERICAN AGRICULTURIST

Women Readers Offer Constructive Criticism

We Want Too Much

WE LIVE in a time of rush, rush, speed and more speed. In spite of our tremendous time- and labor-saving possibilities, many of us feel overworked and tense. We aren't content unless our homes begin with everything complete. We don't even want to think of doing without anything, but want more and more. We must have a new car; the old one is out of date. We must make more money, so we can buy more, so we can get discontented all over again.

Discontented? With all our blessings, our riches, our resources! We need to take inventory and appreciate what we have. We need to be a lot more reasonable. We need to relearn the Golden Rule and to develop our common sense. We need to fortify America so strongly that she will never be attacked. Then we can be truly thankful on Thanksgiving Day and truly joyous at Christmas time.

Mrs. F. B., New York

First Things First

IF WE want to keep America free and strong, we must teach our children to put first things first. What do your children think is important? Is it cars and clothes, or education and homes and American principles? I think that teachers, parents and youth organization leaders are doing their best to teach children true values, but there are other influences that are actually harmful, such as radio programs that encourage cigarette smoking and popular songs that glorify "scatter-brains."

What can we do besides giving our children good home training? We can back up religious and social organizations that emphasize love of God and country and our fellow men, and that help young people to take advantage of their opportunities. Being a 4-H Club leader, I think that organization is one of the finest for teaching children the workings of a democratic government, but of course there are many other fine youth organizations.

Mrs. Ralph Kennedy, Lockport, N. Y., Route 2.

We Must Keep Solvent

THE THING that bothers me is wastefulness in government bureaucracy. I feel that we simply must keep solvent or Russia will achieve her aim—our downfall—without dropping a single bomb on us! It is all the waste here that is straining our government economy. Housewives know that if we "take care of the pennies," the dollars will grow, and it's time our elected officials realized there is a limit to our wealth and our earning capacities.

We must all write and write and write to our elected representatives that we will not vote for them unless their records show that they are through supporting a paternalistic statism.

Mrs. Marguerite Layden, Greenport, Long Island, N. Y.

More Pride and Pioneer Spirit

IF ANYTHING is to be accomplished in keeping America free and strong, it will have to be done through our children. Here are a few suggestions: Start when your boy is young. Be sure that he leaves plenty of food on his plate after each meal so he will learn he is a citizen of a rich country where we don't need to be thrifty. If he doesn't want to go to church, let him stay home and read the "funnies."

Get him a car when he is 18 so he

can go speeding along the highways, mashing a few hens or perhaps a farm child that happens to cross the highway. If he grows up to work at a union job, teach him to strike for higher and higher wages. And finally encourage him not to vote if he is occupied by more important affairs. What's one vote? By the time he is 45 he should begin thinking about going on relief. After all, the country owes him a living. Why work when the government will keep you?

But wait a minute. Have I been using too much irony? Shouldn't we all start going back to God and church and have a little pride and pioneer spirit? Why yes, of course! That's the only way to keep our country free and strong. You get what I mean?

L. Z., New York

A Faith to Live By

IN A world so full of confusion, of doubt and fear, we certainly need a faith to live by. The founders of our country recognized their dependence on God. They pushed on and on into the new land. They were fortified by their Bible, our greatest heritage. They were brave, intelligent people, but they had the humility to put their trust in God, and they built a great empire. They remembered to thank God for their blessings. Religion was at the heart of the home. The world of today needs a new vision of God and a faith to live by.

Edith Shaw Butler, Bernardston, Mass.

— A. A. —

Step By Step

By ALMENA DEAN CRANE

Past President Associated Women of New Jersey Farm Bureau

THE basic principles of freedom which have made this Nation great have not varied over the years, but the methods by which the rural woman has had a hand in preserving them have changed.

I want to make a homely comparison about the changes that have occurred in the past 200 years in the preservation of food and in the growth of the rural woman's political influence. Just as food preservation has progressed from drying and sun preserving to pressure cookers and home freezers, so has she passed through various phases, from working through the voter of the family to voting personally, and then to participating in governing.

The rural woman of colonial days could only speak her mind and will about public affairs through her husband and sons. Later, when the vote came to women, the rural woman could exercise that privilege as well as her town neighbor, but actual participation in government was still in the future for all women. Today, the rural woman may serve in public office and is often found there as school board member or township, county or state official. Wider participation in policy-making organizations is the next step.

Every woman, of course, has not the time, desire or ability to act as an elected or appointed representative of the public, but each of us has the obligation to be well informed about public affairs. Today the very freedoms which we have enjoyed since the beginning of our Nation make being informed ours for the asking.

Mrs. Crane

...Clothes for All...

No. 2503. Every college or career wardrobe should include the smart and wearable shirtwaist — perfect for casual dates too! Sizes 10-20, 36-40. Size 16, 3½ yds. 54-in.

TO ORDER: Write name, address, pattern size and number clearly. Enclose 20 cents for each pattern wanted. Add 20 cents for our new Fall-Winter Fashion Book which has pattern designs for all ages, sizes and occasions. Send to **AMERICAN AGRICULTURIST PATTERN SERVICE, Box 42, Station O, New York 11, N. Y.**

It's Like Visiting

By FLORENCE J. JOHNSON

I WAS busily writing letters one afternoon when my neighbor dropped in for a chat.

"My goodness, you must love to write letters," she said as she saw what I was doing, and noticed the stack of envelopes.

"I certainly do," I said. "It's like visiting. I like to receive letters, so I must do my share in writing them."

"But what can you find to write about? Nothing ever happens around here. My letters are nothing but brief notes to let the folks know we are really alive."

"Oh, little things. The family incidents that come up every day, the neighborhood activities. My little diary helps me to recall what has happened, as I write up—sometimes briefly, sometimes quite fully—all that has happened or what I have done each day. Then, too, I also have my newspaper clippings. I keep these in my desk and when I do my letter writing, I go over them to see if there are any of interest to my correspondent. You'd be surprised at the amount of information

we manage to forget in a few days, information that make interesting letters, and mean much to the other party.

"Then there are the Farm Bureau Meetings, the Home Bureau, the church doings, the school activities. I am telling my sister in this letter about that gorgeous afghan you are knitting and that lace tablecloth Barbara is crocheting.

"I have just finished a letter to my mother who is interested in all kinds of church work and told her about the meeting last week and our plans for the Missionary Society this year.

"Lucy Arnold teaches a Sunday School class of teenagers. I tell her what my class does and is planning to do. She does the same. We help each other in solving many of the problems that come up.

"Then we discuss books and magazines. If a certain article appeals to us and we think it would interest someone else, we enclose it in our letters. The Farm Bureau meeting write-up in last week's paper, I am sending to my

brother. He is the secretary of his local organization, and I know it will be of interest to him.

"Remember the missionary from India who was here several months ago, and the inspiring talks he gave? Our local paper gave him a good write-up, telling briefly but interestingly, the subject of his talks. I sent the clippings to an old school friend who is an ardent worker in her church. They are taking an active interest in his mission, and Alice is seriously considering going out as a missionary.

"I even have a recipe exchange. Edith Lovell, another school friend of mine, collects old recipes. My letter to her today contains an old recipe that I found in Grandmother Vincent's diary. Yesterday, I worked out a new fish dish, which my family heartily approved of last night. My sister has a group of friends who dote on fish dinners, and I am sending it to her for her recipe file.

"Remember that amusing incident in Brown's store last week? Alice Jackson is in the hospital, so I wrote it up in detail with a few illustrative sketches in her letter. I know she will laugh as hard as we did over it, and it will relieve that day's monotony."

"Hmmm!" said my neighbor thoughtfully. "You don't need exciting events to make a letter interesting. You just write as if the party is in the same room visiting with you—you just visit by the postage stamp route!"

Your Children's Beds

By LOUISE PRICE BELL

YOUR child's bed is important, from the time he comes into the world. Our great-grandmothers rocked their offspring to sleep, but parents have learned much since those days. Child specialists advise strongly against rocking the baby to sleep. Occasionally, if the infant is ill, it doesn't harm (they say) but it can easily become a habit. Eventually a rocked child has to become used to falling asleep on an immovable mattress, and so the earlier he learns to do this, the better. Make sure that his crib mattress is comfortable, but not too soft, and if he is healthy he will be asleep almost as soon as he is tucked in.

Children's beds should be checked regularly during the year to make sure they are in good condition. Restful sleep is a basic necessity in building young bodies and alert minds. No child will be alert and eager in the schoolroom if he hasn't had enough of the right kind of sleep at night. He should go to bed at the same time each night and sleep ten or twelve hours with a window open and the proper amount of clean, warm, light-weight covering.

The mattress and spring should be firm, level and resilient so that all parts of his body will receive equal support. Good bedding will allow him to relax completely during his long hours of sleep and he'll waken rested and alert in the morning... ready to make "A" grades in everything!

During vacation time, many parents relax their children's sleeping habits too freely. The end of the school year means a rest for the youngsters' minds, of course. But it also means an increase in their physical activities. Strenuous play from morning till night usually fills the vacation program... and it takes plenty of energy.

That is why health authorities urge parents to keep in mind that bedtime rules should not be relaxed during vacation. Summer or winter, small fry up to seven years of age should get their ten or twelve hours, and older ones should get their required amounts, too. A minimum of ten hours is the goal set for older children, and even though they often object, they'll thank you for your firmness later on.

Elected leaders of New York State Home Bureau Federation for 1951: (seated, from left) Secretary, Mrs. Carl E. Ladd, Ithaca; 1st vice president, Mrs. Homer Day, Oxford; President, Mrs. Ralph Reid, Salem; 2nd vice president, Mrs. Blanche Kelsey, Buffalo; Mrs. Ruby Koenig, Eden, director Western District.

(Standing, from left) Mrs. Raymond Ackerly, Middletown, director Eastern District; Mrs. Lowell Huntington, Westford, director Central District; Mrs. Seymour Legg, Herkimer, director Northern District; Treasurer, Mrs. Frances K. Todd, West Danby, N. Y.

N. Y. Home Bureau Women 103,557 Strong

By MABEL HEBEL

JUST three short of 10,000 new members was the increase in Home Bureau membership reported for 1950 by Mrs. Carl E. Ladd, Secretary of the New York State Home Bureau Federation, at the Federation's annual meeting in Syracuse, N. Y. This brings the total membership up to 103,557.

I wish that every woman could have had the opportunity I had to sit in on that meeting, for it gave me a new conception of what women can do working together for the good of their families, their communities, and the world.

The meeting began on Sunday night with a Vesper service in the ballroom of the Hotel Syracuse. Every chair in the vast room was filled with Farm Bureau, Home Bureau, and 4-H Club delegates and guests (annual meetings of all three organizations were held) and it was something good to hear all those voices raised in song and prayer.

The Year's Accomplishments

Fifty-two counties and two cities reported the next day on their Home Bureau projects. County delegates gave the reports and each took just two minutes. Broome County told of its Antique Study Club, in which members learned more about antiques, how to refinish them, and developed an interest in collecting such items as antique buttons and milk glass. Allegany County described its home dry cleaning project which taught members how to clean clothes safely and economically at home. Chautauqua County told of its apron project, resulting in colorful, useful cover-ups for the whole family, from a carpenter's apron for Dad to a glamorous one for Mom.

Many counties told of successful exhibits of Home Bureau work at local, county and State fairs. "Christmas Card Surprises" by Cortland County made a colorful report, for samples were shown and drew a lot of admiration. The Cortland delegate explained that they used the same technique to produce these charming handmade cards as for stenciling chairs.

Delaware County showed dramatically what could be done with an old hat salvaged from the attic. Franklin County told how it had taken old chairs and,

at small expense, made them into presentable livingroom and bedroom chairs. In Lewis and Schoharie counties, members learned to service their sewing machines, and even resurrected old machines and made them as good as new. Schoharie also told of the great interest in making sewing screens in that county and exhibited a charming one made from a cut down window shutter.

A New Angle

Children's clothes were studied in Orange County from a new angle — their effect on the child, ease of putting on and off, and design to encourage self help and freedom of movement. Members learned skills in sewing, and the clothes they made had better materials, better design, better fit, and therefore happier wearers. Boys' suits as well as dresses were made.

Rensselaer County told of its hooked rug project, of members' new appreciation of color, design and technique, and, especially, of the pleasure and satisfaction they got from having these "works of beauty" on the floors of their homes.

House plants, gardens, better bread, crafts; renovating down, wool and feather comforters; Christmas package wrappings, hobbies—these and many other projects were described, including members' activities in passing on what they had learned to other groups in their communities.

Health and safety, better library facilities, citizenship, legislative studies, and international understanding were other Home Bureau projects reported on by both counties and state committee chairmen. I was personally greatly impressed to hear that 15,000 women took part this year in the Home Bureau citizenship project—9,000 more than the year before. The women called on city and county officials; they accepted jury duty and learned not to dread it; they took more interest in elections and voted more intelligently; they studied taxes and found out where the money goes.

Child safety, especially the problem of protecting children getting on and off school buses (including private cars operating as school buses) caused more excitement in the meeting than any other subject. The loud buzz of talk left no doubt that child safety was the No. 1 interest of the audience.

Something further will be done about the problem this year, said the committee chairman, and she added, "With our 103,557 members, I think Albany will listen to what we have to say!"

In Other Lands

Two high spots at the meeting were talks given by Mrs. W. H. Potter of Truxton, N. Y., and Mrs. Lynn Perkins of Lake Luzerne, N. Y. Mrs. Potter told of her visit to Denmark as a delegate to the A.C.W.W. Triennial Conference, and Mrs. Perkins described her stay in Switzerland as a guest of the Swiss government. Everyone listening to these descriptions of the Danish and Swiss people and their countries gained a little more of that international good will and understanding that we need to make a more peaceful world.

Sally Saves

Clothes Savers

HERE IS a suggestion for making mittens from old wool socks, contributed by Mrs. A. K. Manning, R. D. 1, Tilton, N. Y. You may want to try it. Cut the feet from worn-out wool socks. Using the leg only, stitch around the ankle in the shape of a mitten. Repeat stitching pattern two or three times. Trim and turn inside out. Children need lots of old mittens when playing in the snow.

Mrs. Calvin Boynton, Readfield, Me., uses double thickness strips from discarded sweaters to make new wristlets and anklets for snowsuits, pajamas, and ski pants. She also repairs mittens torn at the cuff this way.

Mildred Wright, Middlebury, Vt., puts an embroidery hoop over clothing tears to be mended on the sewing ma-

chine. The hoop holds both clothing and patch securely, makes the job safer and easier to do.

Patchwork quilts are made from pieces of discarded woolen garments at the home of Mrs. Carl Wetterhahn, Woodville, N. Y.; and from Mrs. B. H. Robinson, Seneca Blvd., Burdett, N. Y., comes this suggestion for putting in zippers neatly: "Sew the placket seam up, then turn the garment wrong side out and baste the zipper in place, being sure to have the outside of the zipper facing the wrong side of the garment. Stitch the zipper in. Turn garment right side out and with a razor blade carefully open the placket seam."

HANDY STORAGE OF KITCHEN UTENSILS

IN THE interest of saving time and steps, check a few possibilities for improving the arrangement of your kitchen equipment.

Are seldom-used pieces of equipment cluttering up the storage space? Put them on high shelves to make room for items used every day.

Is it necessary to move six utensils to get at the one that's needed? Then, rearrange the storage space so that every utensil is within easy reach where most often used. Place daily-used pans toward the front of the cupboard.

Is there enough accessible space for storing utensils used every day? If not, it may be possible to build a few open shelves near the range for oft-used pots and pans. Or perhaps a wall near the range or next to the work center would be a handy place to hang some.

Go a step further and arrange knives, spoons, measuring cups and food supplies so they will be as near as possible to the places they're needed. And when all the rearranging is done, just see if meal-getting doesn't go faster.

Come with Us to Sunny California

ONE of the many delightful places to be visited by our *American Agriculturist* California Tour Party (February 17 to March 13) is Coronado Beach in southern California, where we'll spend three days at the fabulous Hotel Del Coronado and revel in its flowers, golden sands and sunshine. Its surf-side pool, shown above, is fun whether you swim in it or stretch out on the warm sands.

On our grand circle trip around the United States, we'll see much of America — the magnificent Rockies, the spectacularly beautiful Northwest, gorgeous California from San Francisco to the southernmost corner; the amazing Carlsbad Caverns, quaint Tijuana in old Mexico, and the fascinating city of New Orleans. The hotels,

meals, and train accommodations will be of the finest. Best of all, there'll be no travel worries, for Verne BeDell, our popular tour conductor, will be right there to look after everything.

The price of the "all expense" ticket for this marvelous trip is very reasonable. For example, the cost from Syracuse, N. Y., is \$656.73 (with lower berth on trains) or \$640.91, with upper berth. Bedrooms, compartments, and drawing rooms are also available. You can get complete details and exact cost from your own locality by sending for our printed itinerary. Write to E. R. Eastman, Editor, *American Agriculturist*, Box 367-T, Ithaca, N. Y. This is a trip you'll always be glad you took, and you'll never forget the wonderful folks you'll travel with.

Please Tell Me...

By KATHLEEN BERRSFORD
Nutrition Consultant

My 16-year old daughter is very fat and can't seem to reduce. Could this be due to a glandular condition?

In most cases, overweight is caused only by eating more food than the body needs. If your doctor finds that your daughter does not have a glandular condition, he will give her a reducing diet and then the rest is up to her. Sometimes if a girl is unhappy or worried about something, she will feel the need to piece all the time. However, if she is anxious enough to be slender, she will follow the diet very closely, and soon be pleased when she can wear dresses several sizes smaller.

I have heard that cola beverages cause cavities in teeth. I am wondering if this is true.

Cola beverages do not have this effect on everyone's teeth. The enamel of some people's teeth is easily etched by acid, and it is these people who get cavities from drinking anything like cola beverages or lemon juice. This has been shown to be true in experiments done at Cornell University. If the teeth were brushed immediately afterward, or the mouth rinsed out, the acid would not be as harmful; but usually it is not convenient to do this. For children especially, milk would be a better choice because it supplies needed minerals and vitamins which are lacking in the cola drinks.

Are potatoes fattening?

A medium size potato is no more fattening than one ear of corn or one large apple, for instance. Some foods contain many more calories than others. Fried

foods, fats, cakes, pies, candy, and sundaes are the ones to look out for if you want to keep from gaining weight.

Why is it so important to have citrus fruit every day? When I was a girl, we never saw an orange or grapefruit from one year's end till the next, and we were all healthy.

Citrus fruit is an excellent source of vitamin C, which helps to build and repair body tissues and to build strong bones and teeth. Back in the old days, foods were eaten in the region where they were grown. They did not have a chance to lose vitamins during shipping. Also food habits were different then. Potatoes were often eaten three times a day, and three potatoes cooked in the skins have as much vitamin C as one orange. Tomatoes, strawberries, canteloup, and raw cabbage are also good sources of vitamin C.

Can powdered skim milk be used in cooking?

Yes, very easily. If you were making a recipe calling for one cup of milk, measure separately $\frac{1}{4}$ cup of powdered milk and one cup of water. Mix the powder with the dry ingredients and add the water to the other liquids. Or the dry milk and the water can be mixed together first and used as fresh milk, but this makes another step and isn't necessary.

If you have anyone in the family who does not drink milk, you can add a few tablespoons of powdered skim milk to cereal before cooking, or to cream soups for extra nourishment.

My 13-month old baby doesn't seem to want to eat as much as she did. Can you suggest something I could do to get her to eat?

Mother, your baby is probably just a normal baby. The appetite of most babies falls off around the end of the first year. You see, the growth is very

SNOW FOR CHRISTMAS

By Edith Shaw Butler

Lazily the snow
Meanders down
To frost the housetops
Of the town,

To cover the pines,
The distant hill,
The winding road,
The pond, until

My whole small world,
My own back yard,
Looks like one great big
Christmas card.

rapid during the first year of life and then slows up. Babies seem to know this and realize that they no longer need as much to eat. However, if your baby is eating so little as to worry you, talk the problem over with your doctor. Usually, anything you do to force a baby to eat will only make him obstinate and cause trouble later on with food dislikes.

An old shaving brush is good for dusting pleated lamp shades. The soft brush cannot harm the fabric, and the long bristles remove the dust easily from the folds.

Economical Cough Relief! Try This Home Mixture

No Cooking. Makes Big Saving.

To get quick and satisfying relief from coughs due to colds, mix this recipe in your kitchen.

First, make a syrup with 2 cups granulated sugar and one cup of water. No cooking needed. Or you can use corn syrup or liquid honey, instead of sugar syrup.

Then get $2\frac{1}{2}$ ounces of Pinex from any druggist. This is a special compound of proven ingredients, in concentrated form, well-known for its quick action on throat and bronchial irritations.

Put Pinex into a pint bottle, and fill up with your syrup. Thus you make a full pint of splendid medicine—about four times as much for your money. It never spoils, and tastes fine.

And for quick, blessed relief, it is surprising. You can feel it take hold in a way that means business. It loosens phlegm, soothes irritated membranes, eases soreness. Makes breathing easy, and lets you get restful sleep. Just try it, and if not pleased, your money will be refunded.

FOR EXTRA CONVENIENCE GET NEW READY-MIXED, READY-TO-USE PINEY!

Now She Shops "Cash and Carry"

Without Painful Backache

As we get older, stress and strain, over-exertion, excessive smoking or exposure to cold sometimes slows down kidney function. This may lead many folks to complain of nagging backache, loss of pep and energy, headaches and dizziness. Getting up nights or frequent passages may result from minor bladder irritations due to cold, dampness or dietary indiscretions.

If your discomforts are due to these causes, don't wait, try Doan's Pills, a mild diuretic. Used successfully by millions for over 50 years. While these symptoms may often otherwise occur, it's amazing how many times Doan's give happy relief—help the 15 miles of kidney tubes and filters flush out waste. Get Doan's Pills today!

Quaint figures embroidered with colorful floss are very decorative on towels, place mats, pillow cases or aprons. Hot iron transfer pattern No. E-548 contains 15 motifs from 2 by $2\frac{1}{2}$ to $3\frac{1}{4}$ by $5\frac{1}{4}$ inches with complete instructions. Enclose 15 cents and order from Embroidery Dept., AMERICAN AGRICULTURIST, 10 North Cherry St., Poughkeepsie, N. Y.

MITTENS 'N SOCKS: A matching set of mittens and socks are fun to knit and require little time. No. E-979 is done in cable stitch design. Send fifteen cents for complete instructions to Embroidery Dept., AMERICAN AGRICULTURIST, 10 North Cherry St., Poughkeepsie, N. Y. For our attractive needlework book, add 15 cents.

Only 10 More Years and I'll Be 65...

Then I Can Retire

Yes, thanks to my Farmers and Traders retirement plan, I can retire when I'm 65, with an income that will let me live comfortably and travel when and where I please.

You too can plan for retirement if you act now. Find out about the new Farmers and Traders policy that combines retirement and family protection in one low-cost policy.

Friendliness...

A friendly atmosphere makes Hotel Syracuse top choice of visitors.

Comfortable rooms, fine food and easy, cheerful service.

Hotel Syracuse
SYRACUSE, NEW YORK

WHAT'S GONE BEFORE

Mark Wilson is torn between his love for Ann Clinton, a neighboring farm girl, and his feeling that he should respond to Abe Lincoln's call for 75,000 men to put down the rebellion. Henry Bain tries to steal Ann away from Mark, and a fight follows. Finally, Mark decides to enlist immediately, and he and Ann are married in the little rural church before a large congregation.

The next morning the new bride and groom ride to the county seat, where they part, Mark to go to the front, Ann to return home to fight the battle of loneliness and worry on the home front. She is greatly helped by Nancy Wilson, Mark's mother, who points out to her that wars are fought and won not by the soldiers alone, but also by the women who without fanfare of drums or music maintain the homes and their families while their men are gone.

CHAPTER VII

APRIL was past and May had come at last, with its lilacs blooming by the kitchen door and the gnarled, untrimmed old trees in the family orchard on the slope back of the Clinton house covered with pink and white blossoms. As Ann made her way up through the orchard with a jug of water for her father, who was plowing in the field near the top of the hill, she listened to the buzz of a million bees in the blossoms and to the songs of the birds, who were loud in their praise of the warm day.

Sadly Ann thought how differently she would feel about all the beauty and fragrance around her if Mark were only there to share it with her. Strange what a difference one person could make when you loved him. Love really limited one's freedom. With it went the carefree days of youth when, with the exception of the family, no person meant more than another to you. But not for all the world would she trade what she had with Mark! She'd gladly take the loneliness for what she had gained.

Her thoughts went back again to the fragrance and beauty around her, and she contrasted the peaceful scene with the excitement and turmoil of war only a few hundred miles to the south. No matter what happened, Nature went on about her business. Come peace or war, for ten thousand times ten thousand years the sun had shone, and the rains fallen, and the seasons rolled. Let little man tear up the earth with his plow or his cannon, it matters not, for in a brief time the grass covered the scars—and the little man, too. Smiling a little at her own pessimism, Ann said aloud:

"Gosh! I've certainly got it bad this morning."

When her father saw her coming through the meadow beyond the orchard, he stopped his horses and came around to sit on the beam of the plow. Fred Clinton was a short, slight man with light reddish hair streaked with gray. His reddish mustache was lighter than his hair, and its corners drooped down each side of his mouth. In fact, Fred drooped all over this morning, his whole aspect that of a discouraged and ineffectual man.

When Ann handed him the jug, he expertly removed the cork, hoisted it to lie horizontally on his shoulder, and, turning his head a little sideways, he let the cool water flow down his throat. Watching him Ann forgot her own

feelings to grin at the absurd sight of her dad's Adam's apple bobbing up and down in the loose skin of his throat as he swallowed.

"What's so funny?"

"You!" she said, giggling. "Why do men have so much bigger Adam's apples than women?"

"Oh, for gosh sakes! How do I know? Why don't you ask something sensible? That sounds like one of the questions you used to pester me with when you were about four."

"You always tried to answer them too," she said. "You were always good to me, Dad—" she paused and then added, slowly, "when I was little."

"You've always been a good daughter, Ann. But I know what you mean. Guess I haven't been much of a dad or a husband, either, for that matter."

Looking at his bent head and the discouraged slump of his shoulders, Ann felt sorry for him.

"Is anything special the matter, Dad?"

He looked back along the furrow that he had just turned, at the robins who were having a picnic on the angleworms in the new moist earth, and instead of answering directly he said:

"Farming is such a hard game, Ann. I was thinking just now that I wish Mother and I could set you and Mark up with some housekeeping things and a team of horses and some tools. But I guess I ain't much good. I know my failing." With a gesture to the field, he continued:

"Did you ever see so many stones in your life? Every fall I pick 'em off

and lay 'em in the stone wall fence, and every time I plow again there are more'n ever. No wonder the crops are poor. How could anything grow in this rock pile." Bitterness edged his voice as he added:

"Maybe I ain't much good, but how in God's name could anyone make a living on such cussed poor land?"

"We've always had enough to eat, Dad. We'll continue to make out somehow, I'm sure. Things are no worse than usual, are they? Why are you so low this nice morning?"

"Well things are worse than usual. You know about the mortgage on this little farm. Up to a year ago we were able to pay the interest with your help. The crops have been bad lately, that cow died, and the others aren't doing so well. The interest is due on the mortgage and I just ain't got the money to pay it."

Ann knew that her father understood that the real trouble lay in his drinking, but she felt the need to comfort him.

"Well, maybe things will be better this fall. I heard someone say the other day that farm prices are going to be higher because so many have gone in to the army, and they have to be fed as well as ourselves. We'll sell some potatoes this fall, and I'll help with some of my teaching money. We can pay the interest all right, and maybe something on the principal, too. Don't be so discouraged."

He picked up a handful of soil and let it trickle through his fingers.

"That ain't all the trouble, Ann. The bank in Owego has held the mortgage and they've always been a little easy on me when I couldn't make the payments on time. But they wrote me the other day that they have been refinancing, and they've sold some of their mortgages—ours among them."

"Whom to?" she demanded. "Maybe he'll be easier to do business with even than the bank. Who was it?"

A queer look passed over her father's face.

"A friend of yours—at least he was until you married Mark Wilson—Henry Bain. I most wish you'd married him, then we wouldn't have had to worry. But now I don't know how he'll be

toward me. He has money. He owns a lot of mortgages around here. They say he's a hard man to do business with. In fact, just yesterday he was kind of hintin' around to me about my interest and payin' somethin' on the principal."

"Just what I thought," she said, triumphantly. "You're doing too much worrying. I know Henry, and I don't believe he's that kind of a person. I'll just bet you'll find he's all right."

"I dunno," said her father, doubtfully. "He would have been, I guess, before you married Mark, for he was certainly sweet on you. Now I don't know."

He got up rather painfully, straightened his back, went around between the plow handles, put the lines over his shoulders, and spoke to his horses. Ann stood watching him. Suddenly the point of the plow struck a cobblestone, jumped out of the furrow and was dragged along on top of the ground before Clinton could stop the horses. Painfully he yanked it back into the furrow and started them up again.

As Ann went back down through the orchard, she felt worried, not so much about what her father had told her about the mortgage as the fact that she knew from long experience that these fits of depression usually preceded several days' absence from home on a spree.

A little way up the road from the Clinton farm on that same May day George Wilson, his two sons, Charles and Tom, and Enoch Payne, the hired man, were planting corn on the big flat by the creek. George was marking out the long rows with a horse and the three-legged marker. The boys and Enoch, each with a small bag tied around his waist filled with tarred corn, were dropping the kernels about two to three feet apart in the row and covering them with the rich alluvial soil of the creek bottom. Young Tom complained:

"Why do we have to put tar on the corn, Enoch? It's sticky and smelly, and I hate handling the darn stuff."

Enoch grinned.

"Crows don't like the tar any better'n you do, son. It's no use to plant corn if the rascals eat it all up. That's why we plant more'n we need. You know the old rhyme:

One for the blackbird,
One for the crow,
One for the cutworm,
And three left to grow.

"Look at them over on the fence now," Charles exclaimed. "They know what we're doing."

"Sure they do," agreed Enoch. "They're just the outposts or sentinels. They'll report what we're doing here to the main body, and in about ten days when the corn begins to sprout above the ground the whole bunch of them will be here. But they'll get fooled, Tom," he concluded, "because just about one taste of this tar is all they'll want."

Stopping his work, Enoch brushed his long reddish hair back out of his eyes, leaving a brown streak of tar and dirt across his forehead. Then taking out a plug of tobacco and setting his strong white teeth in it, he twisted his head back and forth until he had pried loose a generous bite. With that safely stowed in the side of his mouth, he remarked to the boys, who were leaning on their hoes, glad of an excuse to stop work for a little:

"Can't help but like the black devils, though. They're so darn smart."

"Yes, they're smart all right," agreed Charlie. "When a fellow has a gun, he can't get a glimpse of one; and when you have no gun, you can almost walk up to them."

"Had a pet crow once," mused Enoch. "I climbed a tall pine to a nest filled with the little black rascals way in the top of the tree. The old bird

(Continued on Opposite Page)

Spud Makes a Good Investment

(Continued from Opposite Page)

danged near made me fall, too. She had all kinds of nerve, kept rushin' and tryin' to hit me in the face with her wings. But I stowed one of the young-uns in my pocket, took it home and raised it. Sometimes I wished I hadn't, though. Leave anything loose around the place an' the next minute it was gone! That bird would steal ye blind."

"I've heard that you can learn a crow to talk," said Tom. "Is that true, Enoch?"

"Don't know about that. Mine didn't, unless his constant yapping 'Caw! caw! caw!' meant anything."

"I think they talk among themselves," said Charlie. "You know how two or three will act as guards on the edge of the woods, and when they think something dangerous is coming, they rush back to tell the others. Then after a terrible racket and yelling at each other, they all fly away."

"Yeah! so they do," agreed Enoch. "But the most interesting thing they

Insidious Growth

IT is sometimes difficult to differentiate between a robust prosperity and high business activity artificially stimulated to a point of consequent inflation, because at the outset both appear the same. But the greatest danger of inflation is its insidious growth. Its first influence is pleasantly stimulating—money is plentiful and cheap, business becomes brisk, wages rise and everyone appears to be better off. Then comes the pay-off. Living costs, which have lagged behind this increasing affluence, begin to rise; and the savings of the past lose, temporarily or irretrievably, part of their buying power.—From 105th Annual Report New York Life Insurance Company.

do is their fall elections. They hold them about the time ours are held."

Enoch spat a long brown stream at a potato bug.

"And they probably make jest as much sense as ours. Jest like you said, Charlie, they gather from everywhere, put out guards, and then they start yelling and cawing so you can hear them for miles. Probably some politician among them who can yell the loudest and lie the most wins the election, and then they all quiet down and fly away."

Across the field a few rods away George Wilson had stopped to mop his brow and look meaningly at the group leaning on their hoes. So they got to work again. With long practice they were able to pick up five or six kernels almost every time they reached into their bags, drop them in the row, and pull a couple of hooffuls of soil on them, repeating the operation endlessly and monotonously. Every few minutes the boys would look longingly at the climbing sun which it seemed to them would never reach its zenith and tell them what their stomachs had told them long before—that it was dinner time.

Finally, at the end of a row, in the shade of an old butternut tree which hung partly over the creek bed, they stopped again to rest. The smell of the newly plowed soil under the hot May sun, mixed with the fishy smell of the creek welled up to them. Overlying all was a strong aroma of mint that always grew on the creek flats.

Charles looked out across the cornfield at the simmering heat waves rising from the warm ground and spoke out of his irritation and discontent:

"Enoch, I'm sick and tired of all this. Mark had the right idea. He's getting all the fun and adventure, and he's got out of all this hard work—work that's all the harder because we have to do

our share and his, too. It takes a lot longer now to do the chores and milk the cows. And then we rush out into these fields to work from morning till night. No play, no fun, no nothing but work!"

But Enoch was unsympathetic. "Work's good for ye. An' don't fool yourself about all the fun that Mark's having, either. If ye were down there being bossed around by them officers, livin' on poor grub an' sleepin' on the ground, you'd change your tune. Minds me of a story—"

But Charles was impatient. "The best story I can hear," he growled, "would be that I could trade this blasted hoe for a gun."

"Me, too," chimed in Tom. "We hoe corn an' potatoes into the ground, and we work all summer hoeing the weeds out of them. Then we work half the fall diggin' the potatoes out with a potato hook."

"That's the way it is," said Charles, bitterly. "There was a circus in Owego last summer, but could we go? No. Pa said there wasn't money enough."

"An' d'you know what?" piped up Tom again. "Last Christmas, Ma brought home just one orange. She divided it into six pieces for us kids—didn't even save a taste for herself or Pa."

Enoch grinned tolerantly at the earnest, dirt-streaked faces of the boys.

"You wouldn't believe it now, but you'll know some time, that that little bit of orange you got meant more and tasted better than a whole orange or something else bigger than that will taste when you grow up."

The boys were in no mood for philosophy.

"All I know," Charles repeated, emphatically, "is that I'm sick and tired of all this work and I'd just like to trade this darn hoe for a gun." He paused, then added, half to himself, "And maybe I will do just that."

"What time do you think it is?" inquired Tom, whose stomach was knocking.

Enoch cocked a knowing glance at the sun. "'Bout half past eleven. Come on! By the time we get over and back again, the dinner bell will ring."

Reluctantly the boys followed him out into the hot sun to start planting again.

"If you'd listen to my story," said Enoch, "maybe it would help pass the time."

"Oh, for gosh sakes, go ahead," said Charles, grinning. "We can stand it, and you won't feel good until you get it out of your system, anyway. But I warn you, if Ma rings that dinner bell before you get through, there won't be anybody here to listen to you."

"Well," said the hired man, "it was like this." He slapped at a fly on his face, leaving another tar mark, and went on:

"This really isn't much of a story. While you were grumbling, I was just thinking 'bout what happened to me when I was a boy younger than you. I worked out many a day hoeing 'taters against men, doin' just as good a job as they did. At the end of the day, though, the boss would pay me just half what he did the others, just because I was a boy."

Charles snorted:

"Half pay! We don't even get that."

"Got a home an' folks, ain't ye?" Enoch was becoming serious. More'n I had; my folks died young. My only home was any place I could hang my hat. There's somethin' else you got that you don't know 'nough to be thankful for. It's pleasant in these fields. Things are all the way you look at 'em."

Just then the big farm bell on the stoop started to clang, and as the boys made for the house almost on a run, Enoch grinned and said aloud:

"Never did get a chance to tell 'em that dang story!"

(To be Continued)

Buy Now For Christmas Giving

E. R. Eastman's latest and best book

THE SETTLERS is the perfect Christmas gift for everyone on your Christmas list, young and old. It's both a grand love story and a thrilling tale of adventure in pioneer times. In it you'll meet

- Lovely, unselfish Hannah Williams.
- Young Dr. Jim whom everyone adored.
- Asa and Martha whose love affair took a stormy course.
- Tempestuous Polly Stevens whose beauty stole men's hearts and aroused the jealousy of other women.
- Villainous Henry Kingman.
- Charles Carson, handsome and treacherous.
- Motherly Constant Williams who found tragedy in the new land.

Reviewers say: "The book is based on historically accurate records and is one more important addition to the ever growing Epic of America."

Bound in green and gold, with a colorful jacket designed by Al Coleman, this is a book you'll be proud to own and proud to give.

ORDER YOUR COPIES TODAY!

Christmas will be here before you know it. Decide now how many copies of THE SETTLERS you want for Christmas giving, and send in your order. This is a limited edition. The price is \$3.00 a copy, postpaid. Fill out the coupon below and mail it today.

Some of the Chemung County, N. Y. young people contributing to this page are pictured here. From left, Joyce Van Dusen, Donna Rodabaugh, Onolea Burdsall, Minnie Hofsommer and Louise Palmer. In right picture, from left, are: Philip Benedict, Albert J. Smith, Ivan S. Boor, Lynn Cummings, and Raymond Keener. Instructors standing are Mrs. Dorothy Page, Homemaking; and Carlton West, Vo-ag.

Youth Looks at Citizenship

ABOUT half of us are just too lazy and too indifferent to be good citizens of the United States, according to sophomores in vocational agriculture and homemaking at the Horseheads, New York, Central School.

Before I had had time to recover from that jolt, received while interviewing these young people election day morning, I learned that almost every one of them thinks that voters who do go to the polls do so without sufficient information on the qualifications of those they are going to vote for.

In the words of **Wayne Cornish**, 16, son of Mr. and Mrs. Clyde Cornish of R.D. 3, Horseheads, "People don't seem to care whether the candidates are ex-convicts, poor men or good men." He added that people stay away from the polling places in droves because, "... they don't give a darn about what the government is and don't care what happens in Washington as long as they have the government give them everything they want."

In order to get their individual thoughts on a series of questions on civics, I handed each student a questionnaire to answer so that he or she wouldn't be influenced by the ideas and opinions of other students. On some things they had remarkably similar thoughts, but on others, such as whether or not 18-year-olds should be given voting rights, they were divided almost 50-50.

What's a Good Citizen?

Heading my questions was one asking for a definition of a good citizen. If you want to be one in the eyes of these 15 to 17-year-olds, there are two prime things you *must* do: first, 89 percent of these young people say you must vote at every election; second, you must take an active part in community affairs whether they be elections, or barn raisings.

If you'd like to check off your qualifications as a good citizen in the eyes of these young people, here's the list I prepared from the students' answers:
A good citizen must vote.

He must take part in community and government affairs whether they be city, county, state or national.

He must be honest, obey the laws and rules.

He must take an interest in good government and do his part to help get the right people to run for public office.

He must not go around criticizing candidates or people in office if he hasn't lent his support in selecting and electing them.

He must study government and candidates' qualifications.

He must support his government and stand on his rights.

He should work and get his living from his land or in other honest work. An honest man shouldn't take all the free things from the government and live on other taxpayers' money.

A Party Man

Chemung County political parties should keep an eye on 16-year-old Ivan Boor, son of Mr. and Mrs. Stephen Boor. This young man, who helps with the work on his dad's 326-acre, 54-cow farm, also says that a good citizen should vote but, he adds, "for the candidate in his party."

It was in answer to my question about why only about half the people usually vote that I found out most of the young people think adults are too lazy. **Hazel Rightmire**, 15, of R.D. 1, Horseheads, and

Raymond Keener, 15, son of Mr. and Mrs. Lester Keener, said this quite bluntly, but others like **Patty Blauvelt**, daughter of Mr. and Mrs. Ray Blauvelt, Horseheads, were a little less direct. Patty said, "They just figure that their next door neighbor will do it." **Marion Clark**, 17, who plans to be an elementary school teacher when she's older, and **Deloris Furman**, 16, of Fisherville, put the "laziness" another way. Said they, "It takes only a few minutes to vote but too many people use lame excuses such as 'I have too much to do' and 'there isn't time.'"

Almost 86% of the boys I talked to, and 83% of the girls, said they would like to have more time in school devoted to the study of civic affairs and, while some said they were getting about enough, not one said he'd like to see less civics taught in high schools. They were almost in total agreement in their statement that voters do not take enough time to study the qualifications of candidates, and to this they attributed some of the absenteeism at the polls. Some said that people stayed away because they had too little information on which to make up their minds. Others said that there was so much propaganda that voters were confused.

Want Facts, Truth

David Conklin, 15, son of Mr. and Mrs. Frank E. Conklin, and **Donna Rodabaugh**, 17, daughter of Mr. and Mrs. Darrell Rodabaugh, agree with the mental laziness theory and also that too many people feel that their votes are not important enough to

make any difference in elections. Some think that newspapers could be of real service to voters if they carried factual, truthful information about candidates, and **Joyce Van Dusen**, 16, daughter of Mr. and Mrs. George Van Dusen, believes that books or booklets should be available to voters to acquaint them with the basic platforms and principles of the various parties even if they couldn't have details on each candidate.

I asked my young respondents to list the names of several elective office holders and discovered that the closer the office was to their everyday lives, the less likely they were to know who held the office. A shade less than 95% of them knew the name of the Governor; 79% knew who their representative in Congress was; and 47½% knew the name of the State Senator from their district; but only 42% knew their assemblyman and not many more than a third could give me the name of the supervisor in their own town!

Although 21% of the young people I talked to admitted quite frankly they didn't know, more than 60% stated that they thought socialism is gaining a foothold in our country. Most of them blamed this on government programs, but only a handful would like to see such things as free materials for conservation programs, or old age security, taken away from us. To quote Ivan Boor again, he thinks it's okay to have these programs and pay for them by higher taxes because, "When you reach the age when you won't be able to work, you'll like to have a little money coming in."

Onolea Burdsall, 15, daughter of Mr. and Mrs. James Burdsall, Breesport, had an answer for Ivan: "A stop should be put to many of these programs because after people have worked for themselves, the government just comes along and takes away money they could be saving for themselves." (By Jingoos, Onolea, I have to agree with you that we have to draw the line somewhere and I'd like to add that in addition to saving my own money instead of having the government do it, I also would like the right, if it is squandered, to have the fun of squandering it myself!)

Philip Benedict, 16, son of Mr. and Mrs. J. L. Benedict, who works on their own small farm and also helps neighboring farmers, says he'd hate to see the lime program stopped because, "Even though some of it is paid by taxes, the consumers get the use of it

sooner or later because we are making food available to them. **Barbara Hanlon**, 16, thinks that present social security, conservation and other programs in effect should be continued, but new programs should not be started or socialism will gain a greater foothold.

On the other hand, **Rhona Sweet**, 15, of Erin, puts her stamp of approval on the way things are in America right now and thinks it is all right for the government to raise enough by taxes to continue all programs and to include socialized medicine.

Old Enough to Vote?

Almost half—52%—of the young people think it would be a good thing if all 18-year-olds were allowed to vote in elections as they are in Georgia. **Robert Borden**, 15, of Breesport agrees with the old argument that "If a man's old enough to go into the armed services, he's old enough to vote," and one young lady said that "We learn about civic affairs in high school but when we have to wait several years before voting, we are apt to forget most of the fundamental points."

Minnie Hofsommer, daughter of Mr. and Mrs. William Hofsommer, who helps with the milking and harvesting along with the usual household duties of a farm girl, says 18-year-olds should not vote because they are not experienced enough. **Lynn Cummings**, 15, who helps with the poultry and cows on the farm of his parents, Mr. and Mrs. Reuben Cummings at Erin, agrees with Minnie and suggests that such young people probably haven't paid much attention to candidates for important offices and therefore would vote for just one political party. I'm guessing that Lynn means young 'uns would just go out and vote for the party in which their folks were registered without doing any of their own thinking. **Anne Allington** and **Louise Palmer**, both 16, agree that 18 is just too young for most people to know enough about the importance of their vote. However, I wonder if some of them, even younger than 18 don't place more importance on the ballot box than some of us oldsters.

Only four of those I interviewed offered a means of stopping socialistic trends and theirs were rather terse statements. **Hazel Rightmire** said, "Change administration." **Wayne Cornish**: "Don't throw away things we grow and then buy them from other countries." **David Conklin**: "Get all communists out of our country," and **Robert Borden**, who must have been reading *American Agriculturist* said: "Cut waste, stop the 'give-aways,' and give Washington less tax money to spend!"

Congratulations!

AMERICAN AGRICULTURIST

NORTH AMERICAN ACCIDENT INSURANCE COMPANY
GENERAL OFFICES 209 SOUTH LA SALLE STREET
CHICAGO, ILLINOIS.

GEORGE F. MANZELMANN
PRESIDENT

November 15, 1950

To Readers of AMERICAN AGRICULTURIST:

Your editor, Mr. Eastman, has told me that a major portion of this issue of your paper will be devoted to the proposition of preserving our American Way of Life.

I am for the American Way of Life--- because it honors and rewards individual initiative, thrift and hard work. It is the way of life which has made America the greatest country in the world. It is the way to keep America the strong leader for World Peace. It is the way to maintain security for the individual.

This company, now in its 64th year of service to policyholders, has been built strong and secure by individuals with high integrity, individual initiative, and an eagerness for hard work. We are proud of our achievements.

We are grateful for this opportunity to support AMERICAN AGRICULTURIST in its fight to maintain the American Way of Life.

Cordially yours,

G. Manzelmann
President

KERNELS, SCREENINGS and CHAFF

AT HAYFIELDS

By Tom Milliman

NO MILK TO CALVES

SINCE the early spring of 1947, all Hayfields' calves have been raised without fresh milk. At first we took them off milk at the 10th day, and throughout the milk feeding period fed them proprietary calf foods designed to replace milk when mixed with warm water in the proper proportions. During the first three years we tried out at least four foods by as many makers. Only one of these was poor. We got rid of it by mixing it half and half with dry skim milk and then warm water. From the beginning the calves have available to them a dry food called a calf starter, but to me it is a calf grower. Beginning at age 7 to 10 days, wisps of the choicest hay are made available to them.

About 9 months ago we shifted to the highest priced of all milk replacement foods, 25c a pound, and found that we could take the calf off fresh milk as soon as the dam's udder cleared up, generally the third day, and thereafter follow the schedule given above.

The purpose is of course to save money on the cost of raising calves during their most expensive milk consuming period. The Rochester milk market pays comparatively well. At the price we receive for milk f.o.b. the farm, by using the highest priced milk replacement food, we are saving half the value of the milk the calf would require if raised in the conventional way. At Hayfields the milk

feeding period, even when calves got fresh milk, was never less than 10 weeks and sometimes 12. It is the same now with milk replacement foods. These are for the most part made up of dried skim milk, dried whey, dried buttermilk, vitamins and minerals.

EDITOR'S NOTE: I don't entirely agree with Tom on taking ALL sweet milk from young calves ALL of the time. It may be all right at certain seasons of the year when milk prices are high and fluid milk is short in the markets, but during most of the year when there is plenty of fluid milk it is both good marketing policy and farm practice to feed some sweet milk to calves, thus reducing the surplus.

Dairymen are faced with the fact that the consumption of milk has rapidly fallen off in recent years. Fluid milk substitutes are taking its place. Any milk that is taken off the market tends to improve prices for that which you sell. Moreover, while the substitute calf starters and growers are good, and excellent results can be secured from them, after considerable first-hand experience I am still sure that sweet milk is the best feed in the world for the young calf. What do you think?

—E. R. Eastman

Note Alice Blue Belle's picture. We knew she had the inheritance for large size and would therefore make a good calf on which to test growth without milk. We have two other heifers raised without milk which have higher records for total butterfat. But these, although fully realizing their inheritance for size, nevertheless came from smaller ancestry.

A TRUTHFUL MAN

IT WAS almost pitch black on Halloween night when Jim went out at 9:00 o'clock to sweep up in front of the cows and look things over. As he passed by the calf and bull barn (it used to be the horse barn), he saw a

sheet of white which he frankly admits disturbed him a little, and then only a few feet away as he opened the cow barn door, a terrible roar broke loose behind him.

Jim scampered up the stairs to the hayloft, and his heart pounded. From a safe vantage point, he peeked out and as his eyes gradually became accustomed to the dark, the following scene unfolded. Goldy, the enormous imported South Devon bull, had followed the team of horses out of the pasture when they broke down the fence to get at the newly filled crib of corn. But Goldy wasn't tall enough to reach the corn high up in the opening and kept on going toward the bull and calf barn. The two bulls inside apparently sounded off, so Goldy, in an effort to reach them, knocked down one of the sliding doors and it fell outward—its whitewashed inside sur-

Alice Blue Belle, as a 3-year-old cross-bred, when dry, weight 1,400 lbs. She was raised entirely without fresh milk after the 9th day, and is pictured here to show that milk replacement food did not stunt her growth. She freshened at 2 yrs., 4 mos., and on twice-a-day milking produced 12,660 lbs. milk, 493 lbs. fat, in 338 days. At her 2nd calving she dropped twins, without trouble, and is now milking at a slightly higher level than the 1st lactation.

face on top. That was the white sheet Jim saw.

Having no use for other bulls—but being a gentleman at heart—Goldy would not cross the white expanse of door lying on the ground and just stood there and roared. Jim got Stub, who lives down the road, and together they rounded up Goldy and the horses and put them back in the pasture. Mighty glad I wasn't there that night. Too spooky.

← Uncle Sam's gift of limestone to a Central New York farm. Note the new delivery beyond shed at right. Such scenes of neglect and costly waste to taxpayers are becoming fewer than when I had this picture taken a few years ago, but they still exist. Some of my friends who take such subsidies do so on the theory of getting theirs while it lasts. Others raise the point that since government pays for less lime than is generally needed, its action decreases rather than increases the actual use of lime. Such an argument is supported by claim that in the last 10 years, the use of high-priced complete fertilizer, which isn't subsidized, has increased more than lime. Lime is needed ahead of fertilizer. Same government office that dishes out lime also puts on controls.

↑ Here Uncle Sam has also contributed, but in a much different and more permanent way. At public expense, soil conservation technicians and surveyors laid out the plans for a farm pond, diversion ditches, and contour strips on the farm of Oscar Kinon of Schuyler County. The cost to the public was small. The work was done by local people and was paid for by Mr. Kinon. The results are visible, will last for many, many years, and through flood control, better drainage, and land improvement, all the people benefit along with the Kinon family.

This job doesn't disappear, and the public expense isn't repeated. Many students of flood control believe that numerous farm ponds are more important than a few big government dams.

Soil Building

Increasing Livestock

Up-Grading the Diet

These are the seven magic words which have sparked a crusade the length and breadth of agricultural America.

They express the basic doctrines of a new and broader concept of farming *and living*. Known as "Animal Agriculture", it forms the basis for a national farm and food program designed to build the fertility of our farms, and give to America and the world a new measure of freedom and abundance.

No greater tribute can be paid the late H. E. Babcock, father of the idea, than the present wide adoption of this program which he so vigorously and successfully advanced.

Next April a National Animal Agriculture Institute meeting will be held at Purdue University to train selected leaders in a complete understanding of this far reaching idea; also ways and means will be developed to follow through with this nationally important program in the months and years ahead.

As one of the divisions of the AVCO Manufacturing Corporation, we are happy to sponsor this dynamic idea initiated by our former associate, Ed Babcock. And we take pride in the fact that our adoption of this three-pointed Animal Agriculture program dates back to the time of its inception.

AMERICAN AGRICULTURIST

FOUNDED 1842

THE FARM PAPER OF THE NORTHEAST

Country roads like the above are picturesque in summertime but there are too many of them which for 9 or 10 months a year are a daily headache to the farmers who have to struggle over them, to get supplies to the farm and food to market.

Trucks are an essential part of our whole transportation system, but huge ones as illustrated above require roads and bridges that are thicker, stronger, wider and many times as expensive as the roads needed back in the Tin-Lizzie days. In New York State, trucks can operate legally with axle weights higher than allowed in 40 other states. It's legal in New York for a truck to operate with a gross loaded weight of 63,750 pounds—nearly 32 tons!

POINTS TO EMPHASIZE

1. It has been pointed out that the 705 miles of new, heavy-duty highways in New York this year will cost \$198,000 per mile—as much as it would to improve 23,300 miles of rural roads.
2. Forty other states with truck axle weights lower than in New York are spending only \$25,000 a mile this year for state highways.
3. We need truck transportation. We couldn't do without it. If we hadn't needed it, it would never have become the giant industry it is today.
4. But, we don't need trucks that exceed, by 4,000 pounds an axle, the weight recommended by the Federal Bureau of Public Roads, by the organization of highway officials of all 48 states, by the Secretary of National Defense, by the National Security Reserves Board, by the American Automobile Association, and other authorities.

THINGS TO DO

1. Lower the New York State legal big truck axle weight several thousand pounds.
2. Raise the license fee for heavy trucks to a figure more in line with their demands on our highway system.
3. Enforce the legal weight limit, which will not only prolong the life of our roads and cheapen their cost and maintenance, but will also protect the many truck lines that do live up to the law from the unfair competition of those grossly overloading.

YOUR Most Important Road Goes Past Your Farm

By JIM HALL

MY JOB of calling on farmers and then writing about what I see and what I am told for the information of about a quarter million farm families is a pleasant one. But my work isn't all along the wide, smooth, comfortable highways that most people enjoy when they go for a trip to the White Mountains of New Hampshire or to see Niagara Falls. For stories, I visit you men and women who produce the milk and eggs that city folks have for breakfast, the chicken and turkey and vegetables they have for dinner, and those luscious apples and cherries their kids go for after school.

My travels take me into all sections of the Northeast from the Aroostook County, Maine, potato fields down to South Jersey, but for simplicity's sake, I'll use New York State figures to tell my story.

In the Empire State, farmers buy one million dollars worth of livestock feed every day in the year. That's a lot of feed even when it's \$80 or \$90 a ton! It's about four million tons of fertilizer, costing about \$20 million a year, and something over a million tons of lime costing \$61½ million. Dairy farmers—and this always surprises city folks—have to replace from one-quarter to one-fifth of their milking herds each year because cows, even more than machines, grow old, inefficient and unprofitable.

All that feed, fertilizer, lime and some of the stock have to be taken to these farms.

All these commodities—and many more

that are used in the job of producing our food—are delivered to distribution points by rail, by huge transport trucks, and by ships that dock at Buffalo, Albany and other points. But our common carriers very rarely deliver to the farm. That million dollars worth of feed a day, and all the other things, get out to the farm in the farmer's own little truck, and, in some cases, in the form of a couple of bags stuffed in the trunk or tied to the bumpers of a passenger car.

In addition to all these things that some 150,000 New York farm families buy to produce our food, they also buy consumer goods in greater quantities than city residents. Paint for barns and homes, clothing, the new bicycle for junior, and most of their food have to be purchased in town and hauled out to their farms. And note that I didn't say "delivered." Not even Railway Express delivers to rural routes.

Trucking Every Day

And that's only a part of the traffic between the farm and town. What's produced on the farm has to go to town, too. We have to take more off the farm than we haul in, or we wouldn't have any farms. Milk has to go to the local milk plant every morning, and the empty sterilized cans have to come back.

Eggs keep a little better than milk, when properly cooled, but they have to make the trip at least once a week. It's a daily, never-ending, unspectacular job to keep Americans well fed.

I wish I could show you a picture from a

(Continued on Page 3)

Some of the Best Chicks In the World are Produced in G.L.F. Territory

There's no need of going very far away from home in order to get good quality baby chicks. In this past year's egg laying test five of the top pens in the United States came from hatcheries located in the northeast.

Nearby Chicks are Tops

Right here in New York, New Jersey and Pennsylvania we have men who have bred and selected their poultry breeding stock so well that their birds stand up with those anywhere in the world. These hatcherymen are turning out chicks right now that grow bigger faster and, as layers, can produce more eggs than the

birds of fifteen years ago. Many of these hatcherymen are G.L.F. members and live close to you.

Buy Your Chicks Close to Home

Chicks from nearby hatcheries are not only among the best in the world, but they just naturally receive better care. They run less chance of being chilled and weakened from long trips than those shipped long distances. Because they are nearby, you can know the hatcherymen personally and visit with them about your chicks.

This year, buy your chicks from one of the good northeastern hatcheries.

An American Pastor Visits Other Lands

By WALTER DODDS

Pastor, First Presbyterian Church, Ithaca, New York.

LAST summer, as I traveled through the Near East, Iran, India, and Egypt, I found all eyes turned on America. Through newspapers, radio and personal contact, people know what is happening here—all of the bad and at least some of the good.

For example, the front page of a newspaper in Delhi, India, featured the mistreatment of some negro boys in Alabama. Some Hindus, who consider themselves as Aryan as any man, told with bitterness how they were thrown off the white man's train in our South. In general, America is well regarded, but that regard can and should be improved. For many reasons—some selfish, some unselfish—we in America are as interested in other lands as they are in us. At the time Jesus was born, people knew nothing of those who lived even a mere hundred miles away. Now, all people know what is happening everywhere. We are in one world, but just being acquainted with another person doesn't necessarily make you love him. Not everyone the world over loves America.

One of the most effective things I saw to increase the regard and respect of others for us was at Jibrael in Lebanon. Centuries of erosion had depleted the fertility of the soil until the young people were leaving for greener pastures as soon as they were able. Under the direction of Neal Alter, a Christian missionary, this is being slowly but surely changed. Neal started by introducing better seed and animals to increase food production. Prices there are no problem. The goal, much to be desired, is to produce enough food to feed the family until the next harvest.

Then, seeing the need for fruit trees, Neal Alter investigated. The people told him olive trees would not grow, but a study of history showed that excessive taxation centuries ago had resulted in forcing out the olive trees, and no one remembered why. Mr. Alter encouraged the setting of olive trees, which are thriving and adding much to the well-being and income of the owners.

A school was started at Jibrael. The aim was and is to teach students to use the resources of the area to build a satisfactory life for themselves and their families. Emphasis is put on the training of girls, a new idea in the East. When a young man finishes school and marries an ignorant wife, the education of their children must start where their father's did. But a young woman, taught the fundamentals of nutrition, homemaking, and Christian citizenship teaches her children for the first eight or ten years of their lives.

You might well ask, "What will happen when Neal Alter gets too old to carry on?" The work will go on. With him is Mounier Khoury, a native of Lebanon and a graduate of the Kansas State College of Agriculture. No offer of more money will change his resolve to stay and work there! Furthermore, the Lebanese government is

setting up a country-wide school system patterned after the one at Jibrael. We found conditions far less favorable in many places. In Iran, no farmer can ever hope to own the land which he works. Many times he pays a rental which takes 65% of what he produces, and sometimes he buys the seed and pays the taxes. One of the best defenses for the kind of free enterprise we have in America is that our farmers and our workers get a far bigger share of what they produce than do those in the lands I visited.

These people without hope provide fertile ground for Communist propaganda. They are told that they will own land under Communism. The promises are false, but many believe them.

In India, progress is being made toward making land available to those who work it. Land is being taken from the princes who have owned vast areas. These princes are well paid as long as they live, but when they die, the next generation of princes may have to work!

Naturally, I came home with certain conclusions. I realize the danger of opinions based on a relatively brief visit, but at least I did not make them from an airplane, train, or automobile. I did talk with the common people in every land I touched.

Here are my conclusions:

1. The only way we can help the people in other lands is to help them help themselves.

More work in years past like that done by Neal Alter in Jibrael would be a good investment in peace and world brotherhood now. One reason why there hasn't been more is the failure of Mission Boards to tell American farmers what was being done.

2. We could make what we are doing for other countries more effective by

the ones we had when we were all driving 1915 Model "T's."

For as many years as I can remember, farmers and farm organizations have been screaming for some decent farm-to-market roads. (They have screamed almost as much as labor has for higher wages, security, and short hours.) Good roads to these good farms would mean less costs, because there would be fewer breakdowns, less labor, and untold time saved.

American Agriculturist has been in the forefront in this screaming. Our state government has been sympathetic, and has helped, but there just hasn't been enough money to do a real

giving a better example of Christian living here at home.

3. We must use the press and radio in other lands to tell our story. Our enemies never fail to tell about our vices. We do little to tell of our virtues. I was interested to see the large number of radio sets. Those designed to hear local stations are not expensive.

4. One of the last and least effective ways of helping is to send materials or to give money which is used to buy materials.

The people in the lands I saw believe, and with good reason, that their governments are corrupt. Therefore, when we do send money we should know how it is spent, lest it be wasted or worse.

5. Military aid, in my opinion, should be the last resort.

I am not a pacifist. So long as so much evil is loose in the world, we will need armament. But armament is not the final answer. In the first place, war never settles anything. Wars breed war. But even more important right now is the fact that men will not fight to defend what they have unless they believe that what they have is worth defending.

Unfortunately, millions in the Near East and Asia distrust all government to the extent that they care little who governs. If Communism takes over, they will regret it when it is too late, but they will not fight willingly now.

There is something about the Christmas season that tends to turn the thoughts of men toward the idea of universal brotherhood. America these days is very much in the eyes of the people of all nations. It gives us a wonderful opportunity to share the best we have in improved methods of living and spiritual values that are the foundation stones for a better way of life.

Your Most Important Road Goes Past Your Farm

(Continued from Page 1)

recent advertisement. Maybe you saw it. In this picture is what I judge to be a 1915 Model T Ford being pulled out of muddy ruts by a husky team of horses. The title is "How You Got Out of the Mud," and in the fine print underneath it says, "Only a generation ago, this was a typical main highway."

The Road to YOUR Barnyard

Well, to any farmer the main highway is the one that leads up to his barnyard. Some of you are on good roads but most of them are not on the nice, numbered highways — they are back in those hills and up those little country side roads that look so romantic in the rotogravure sections of the city papers. We've all seen those pictures that bring back fond memories to city people of that glorious month every summer that every city man or woman I've ever talked to used to spend on granddad's farm.

Those are the farmers' "main highways"; those are the roads over which too many have to struggle to bring in supplies and to bring out our food every day—in the muddy falls and springs; and in slippery, snowy winters, as well as in those beautiful summers. I've been on roads in nearly every one of our northeastern states that were worse than the horrible example of "a

generation ago" pictured in the recent advertisement. Even equipped with mud tires and chains, I have had to give up on roads that some farmers had to use every day — and they couldn't give up, or their animals and some consumers would go hungry. Remember, I am not talking about a generation ago. Within the past year I've been bogged down in Vermont, Pennsylvania, and New York. The Pennsylvania farm I finally walked to, represented an investment of at least \$65,000 and supplies consumers with a half million pounds of milk a year.

Grandpa wasn't so bad off. He got back and forth to town with bobsleighs. But today, if the highway superintendent left the snow on the main roads in order that farmers could use sleighs all the way to town, I'm afraid motorists might raise a slight objection.

What Farming Costs

That little farm might look like a rather poor, run-down place to a city man speeding by, but if he happened to notice 10 or 12 milk cans on the rack beside the road or milkhouse, you can bet that that farmer has 30 or 40 milk cows that cost him somewhere between 10 and 20 thousand dollars if they are just ordinary cows. You can also figure that, if he is efficiently mechanized, his total investment is at least \$30,000. He is supplying the capital, the management and the labor . . . but the kind of road many of them have to contend with in order to keep in business and produce our victuals is too much like

the ones we had when we were all driving 1915 Model "T's."

For as many years as I can remember, farmers and farm organizations have been screaming for some decent farm-to-market roads. (They have screamed almost as much as labor has for higher wages, security, and short hours.) Good roads to these good farms would mean less costs, because there would be fewer breakdowns, less labor, and untold time saved.

American Agriculturist has been in the forefront in this screaming. Our state government has been sympathetic, and has helped, but there just hasn't been enough money to do a real

job. The farmers' roads have had to suffer — perhaps because there are fewer farmers than city people to scream.

Overloaded Trucks

Then the Citizens Public Expenditure Survey and Griffenhagen and Associates made their survey and recommendations regarding New York State roads. Ed Eastman wrote an editorial (September 2, 1950) based on this factual material. He pointed out that in one police check-up, one-quarter of the big trucks were overloading, even though New York legally allows gross weights up to almost 32 tons; that highways and bridges to carry these terrific weights are mighty expensive; and that these heavy trucks pay the third lowest license fee in the nation while the light-weight farm truck pays the third highest fee. Ed also called attention to the fact that it costs 23c in license fee and gas tax to move a passenger car 100 ton-miles, but only 5c for the big heavy trucks.

Farmers are notoriously poor correspondents and seldom take time to write about something they agree with, but this editorial proved the exception. Letters came from all over the state, with only one farmer raising an objection to Ed Eastman's statement. Most of them were much more outspoken than Ed in expressing their ideas about what these Goliaths were doing to our roads and budgets! I believe that if enough of us become aware of the points emphasized in column one on the front page, and start doing something about it, we'll have lower initial cost and lower maintenance and repair costs on our main highways. Then, perhaps, we'll have enough funds to get our farmers "Out of the Mud" in this generation.

MAKE YOUR RESERVATIONS!

If you want to go on the American Agriculturist California Tour, Feb 17-March 13, we urge you to make your reservation at once. Space is sure to be sold out early in January. So popular are these tours that last year we had to disappoint 160 persons.

A postcard to *American Agriculturist*, Box 367-T, Ithaca, N. Y., will bring you our tour itinerary. It contains a complete day-to-day description of the things we will do, as well as pictures of some of the beautiful places we will see.

A \$10.00 deposit will hold your reservation. If circumstances force you to cancel at the last minute, all payments will be refunded. But don't delay. Make your reservation now, so that you will not be disappointed.

THE EDITORIAL PAGE

GRACE AND FRED RETIRE

IT IS WITH REGRET that we announce the retirement of Mrs. Grace Watkins Hockett as home editor of *American Agriculturist*, and Mr. Fred W. Ohm, as superintendent of our printing plant at Poughkeepsie. Both Grace and Fred have done a fine job for you and for *American Agriculturist* for more than 25 years and have played a large part in building this publication to its present great position of prestige and usefulness.

But there comes a time in the lives of all of us when we have earned the right to more rest and more opportunity to do some of the things we have always wanted to do. Fred and his family have purchased a home in Maine, where he expects to catch fish 7 feet long and shoot deer bigger than elephants!

Grace and her husband, Dr. Hugh Hockett, will continue to reside in their beautiful home at Riverhead, Long Island, where she will have more time for her many hobbies, especially her flower garden. We are glad that she has consented to stay on our staff as consultant, where her advice and help will always be valuable. She will also continue to write articles on flower gardening for us.

Succeeding Mrs. Hockett as home editor is Mrs. Mabel Hebel, who for 16 years has teamed up with Grace in editing one of the very best home departments in any farm publication in America. At Poughkeepsie, Mr. Jack Weatherby, who for some time has been Mr. Ohm's right-hand man as assistant superintendent, will take over Fred's duties as printing plant superintendent. Therefore, both of these important positions will continue to be in excellent hands.

WHEN YOU FEED DIMES

THE next time you go to the barn or henhouse to feed the cattle or poultry, imagine that your pockets are filled with nickels and dimes. Then as you go up and down the mangers or feeding racks, instead of throwing in the grain pretend you are throwing in the equivalent in nickels and dimes. If you do, I'll bet it will give you an entirely different point of view on your feeding methods. Here is how it works out:

At this writing a good dairy ration costs about \$70 a ton, which is 3½¢ a pound. Let us say that a quart of that feed weighs about a pound. Every time you dish out a quart of feed it costs you 3½¢, therefore you will throw to every good cow several nickels or dimes. Your pocketful of change won't last long, will it?

I'll guarantee, also, that if you will try that little experiment you will be mighty careful thereafter how you weigh or measure out the grain for every individual in your herd.

POSSIBILITIES FOR TELEVISION

BECAUSE of the tremendous possibilities of television in teaching many subjects in the schools, the New York State Board of Regents and Commissioner Wilson are working with the National Communications Commission to obtain television time for educational purposes.

As an example of television possibilities, take the teaching of history. To many students, history is a dull subject because it is difficult for teachers to dramatize it. But can you imagine a student ever forgetting some great historical event like the signing of the Declaration of Independence, Lee's surrender at Appomattox, or Pickett's charge at Gettysburg when dramatized on television by great actors! What could bring home the horrors of war more than a picture of a bombed city?

Or take literature. I found Scott's "Lady of the Lake" dull reading when I was in school; also, Shakespeare. But dramatize some of the great scenes from literature on television and you couldn't keep a student out of the classes.

By E. R. Eastman

CHRISTMAS AS USUAL

TO wish a Merry Christmas and a Happy New Year in these uncertain and unhappy times seems at first thought to strike a wrong note. But we must all carry on. The children have every right to their Christmas. So do the rest of us.

In celebrating Christmas, and throughout the new year, we would do well to remember, especially during these times, that Christmas is the birthday of Jesus Christ, and that Jesus came to bring peace on earth and goodwill to men.

But, make no mistake, Jesus was no milk-sop, no appeaser; neither were the other great prophets and leaders of men. When it was necessary to fight the forces of evil in order to preserve peace and freedom, they fought, even though it led to Calvary, to Valley Forge, to Gettysburg, or to the beaches of Normandy. So it is now. Tremendous forces of evil are loose in the world. They must and will be overcome. America has always muddled through, and she will this time.

In the meantime we will be more likely to win if we, as individuals, keep cheerful and optimistic and as happy as possible. So, we of *American Agriculturist* wish you and yours a Merry Christmas and a Happy New Year.

WORKING TOO MUCH LAND?

THE coming of the tractor and other modern farm equipment has made it possible for the farmer to increase greatly the number of acres he works, but I wonder if many farmers are now trying to work so much land that they are not doing any of it very well.

Where farmers are trying to handle too many acres, the work is never done on time. A rush job of plowing is often a poor job; the ends are not plowed, with the result that the hedgerows are widened. Fitting and cultivating are often slighted, and not enough care is used in the application of fertilizers or in the selection and planting of seed. The total result of all this is a too low acre yield for the cost of fertilizer, seed and labor involved.

Is this point of view something to think about or am I all wrong? I'd be glad to know what you think.

IF YOU HAVE HEART TROUBLE

DOCTORS estimate that 9 million Americans suffer from heart disease, and a great army of them die of diseases of the heart and blood vessels every year. Many of the victims are farmers, for our occupation with its strains, stresses and worries is particularly hard on the heart.

If you have heart disease, you might just about as well commit suicide with a gun as shovel through a snowdrift or mow away hay in a hot hayloft, or get into any physical jams or emotional excitement. If you want to live, you'd better rest and pay attention to what the doctor tells you.

There is a little booklet published by the U. S. Government Printing Office at Washington, D. C., called "Heart Disease — A Story of Progress." It costs 15¢. You might find it interesting and helpful.

THE GREAT STORM

I NEVER saw wind blow so hard as it did in the great wind storm that prevailed over the entire Northeast during the weekend of November 25.

Fortunately, my own buildings came through in fairly good shape, but the damage to farm property throughout the Northeast was tremendous.

How sad it is, after men and women have worked

for a lifetime to get a little property together and paid for, to see it destroyed in the space of a few moments.

FINISHED IN TWO NIGHTS

"I received your book *THE SETTLERS* and I think it is the most interesting book I have ever read. After I started reading it I just couldn't put it aside until I got halfway through it. Then I finished it the second night."—L.G.E., N. Y.

MR. EASTMAN has received more than 250 enthusiastic letters about this great story. Get a copy while the supply lasts for your own library or for a Christmas present to a friend. Send your order with \$3.00 for each copy to *American Agriculturist*, Department TS, Savings Bank Building, Ithaca, N. Y., and the books will be sent to you postpaid.—M.R.S.

WATCH POLITICIANS

THE recent elections indicated that the American people at last are waking up. The crisis the country now faces is solidifying their antagonism to all socialistic schemes such as socialized medicine, too high subsidies, too much social security, work insurance for dead-beats, the "give-me's," all of which is resulting in millions of tax-eating office-holders, ruinous taxes, and in an inflation which will destroy our country unless it is stopped.

All of us voters will do well to watch our political leadership in both parties and mark them for ignominious defeat if they continue in their failure to support the basic principles of thrift, personal initiative, hard work and personal responsibility which made this country great. Politicians have no right to ask me to tighten my belt until they do some of it themselves.

There is need of a realignment of our two-party system so that it can be clearly understood what each party and the candidates stand for. As it is now thousands of Republicans and Democrats are splitting their tickets, refusing to support either Republican or Democratic candidates who are socialists because they think that is the way to get votes.

EARLE HARDENBURG

POTATO growers in the Empire State and in all the Northeast have lost a real friend in the death of Earle Hardenburg. He knew potato growers and their problems. Better still, he loved farm folks and they loved him.

EASTMAN'S CHESTNUT

ED WEEKS tells a story in the *Atlantic Monthly* about 10-year-old Dorothy's composition on the cow:

"The bird that I am going to write about is the Owl. The Owl cannot see at all by day and at night is as blind as a bat.

"I do not know much about the Owl, so I will go on to the beast which I am going to choose. It is the Cow. The Cow is a mammal. It has six sides—right, left, an upper and below. At the back it has a tail on which hangs a brush. With this it sends the flies away so that they will not fall into the milk. The head is for the purpose of growing horns and so that the mouth can be somewhere. The horns are to butt with, and the mouth is to mop with. Under the Cow hangs the milk. It is arranged for milking. When people milk, the milk comes and there is never an end to the supply. How the Cow does it I have not yet realized, but it makes more and more. The Cow has a fine sense of smell: One can smell it far away. This is the reason for the fresh air in the country.

"The man Cow is called an Ox. It is not a mammal. The Cow does not eat much, but what it eats it eats twice, so that it gets enough. When it is hungry it moos, and when it says nothing it is because its inside is all full up with grass."

AA's Farmers' Dollar Guide

WAR? As this is written, total war seems very close. Rumbblings of dissatisfaction directed toward those charged with our diplomatic efforts are growing. If World War III is at hand, here are some developments for which you will want to watch and plan:

1. Inflation will continue—at an accelerated rate.
2. Most young men on farms will be drafted into the armed services.
3. As always in war, demand for food will skyrocket.
4. Supplies needed to grow food will be short. Gasoline and rubber may be first.
5. Program of controls probably will be tighter than in World War II, including rationing, tighter credit and price fixing.
6. An attempt to keep food costs low to consumers is probable. Subsidies are likely to be used as they were on milk in World War II.

INCOME TAX: You have two choices. You can (1) file your return and pay your tax on or before January 31, 1951, or (2) you can file an estimate of your tax and pay that amount by January 15, then file your return and pay the balance on March 15. Fill out the duplicate form in pencil, so you can make changes, and when you file the original, keep the duplicate where you can find it.

If you are running a big farm business, it may pay you to hire some one to figure your tax. He will save you work, and he is likely to save you more than his fee. If your records for '50 do not give you the information you want, now is a good time to plan for better records in 1951.

PLANS: Whether or not war comes, planning always pays dividends.

POULTRYMEN will probably find egg prices down temporarily this spring because price supports will be abandoned. However, the situation may correct itself by fall, so it looks like good business to raise the normal number of pullets.

POTATO GROWERS will be on their own next year. They can grow as many acres as they want, but there will be no government price supports. However, potato growers must realize that more potatoes have been grown for several years than consumers will eat.

Where the acreage of any crop is cut, there is always the problem of what to grow. It is interesting to note that the acreage of grain as a cash crop has increased in the Northeast in the past few years. Two reasons for this increase are: first, government price support programs which northeastern farmers believe have favored grain growing areas and, second, the fewer man hours needed to grow a bushel of grain. Previous to 1940, farmers could grow a half bushel of corn per hour of labor; now with improved equipment they can grow 3 bushels of corn per hour of labor. When figuring your cash crop area, don't overlook corn or other grains.

DAIRYMEN sometimes neglect to cool milk properly in winter. It is important for two reasons: 1. To prevent freezing of the milk; 2. Warm milk exposed to cold air, even far below freezing, cools very slowly, and until it cools, bacteria continue to multiply.

GRASS SEED supplies are about like this: **Ladino clover**, plentiful. Some has been imported from Italy because of lower cost. Some tests on Italian seed favorable but still inconclusive. **White clover**, U. S. crop small. Considerable imported. Prices expected to be about last year's level. **Birdsfoot trefoil**, New York Empire seed crop largest in history. **Kentucky blue grass**, a little bigger crop than last year, but demand also higher. **Orchard grass** supply above last year with big demand. **Brome grass** supply larger than last year at about one-half the price. **Perennial rye grass** supply bigger, demand and price higher.

POWER: If farm help becomes scarce, electricity can help to fill the gap. However, if more and more electrically operated equipment is added, the wiring, once adequate, will not carry the load efficiently.

—Hugh Cosline

The Song of the Lazy Farmer

DECEMBER'S coming at our place puts bigger smiles upon my face; with snow and cold, this month is when the pancake season starts again. In spring and summer and in fall, the griddle's hardly used at all, because pancakes, Mirandy feels, are only good for winter meals. From April 'til Thanksgiving's o'er, I argue that she should make more, but women don't change once they're set, so eggs are all I ever get until December rolls around and there is snow upon the ground. 'Til then Mirandy seems to be afraid hotcakes will founder me.

That notion is such poppycock that it is really quite a shock to hear my own wife using it, she sounds like she ain't got much wit. Why, ev'rybody knows there ain't a single justified complaint that can be made about wheatcakes, the finest dish a woman makes. When batter's mixed up properly (Mirandy's always is, by gee), you needn't have a bit of fear no matter

what the time of year; however big the stack you eat, they'll give you pep that's hard to beat. Mirandy knows that, too, I'm sure, and I doubt that her motive's pure; it ain't my health that worries her, it's making breakfast easier.

Why is
this ointment
so effective
in treating
mastitis*?

Millions of cases
have been successfully
treated with it!

Look inside the quarter!

Note how Squibb Ointment disperses penicillin throughout a treated quarter! One tube of Squibb Ointment, containing a dye instead of penicillin, was instilled into one quarter of a cow's udder. The cow was killed 17 hours later—the udder removed and frozen—and the above cross-section photograph taken.

Here are your reasons for asking for Squibb Penicillin Ointment:

- Thorough dispersion throughout entire treated quarter, reaching the infection no matter where it may be in the quarter.

- Attacks mastitis* organisms over a period of from 48 to 72 hours—without interfering with regular milking hours.

- Effective in 9* out of 10 cases of mastitis—usually with only one tube.

- Stops milk check losses by getting infected cows quickly back to production of salable milk.

- Stable, non-toxic, non-irritating.

- Clear ointment—won't discolor milk.

- Easy to use. Improved tip on tube inserts into teat. Ointment flows readily from tube into infected quarter. Treatment is a matter of seconds. No syringe required.

Squibb "Instant-Use" Penicillin is sold in drug stores only. Ask your druggist for it. It's inexpensive! Keep this proved ointment always on hand in the barn. Treat mastitis* at the first sign—stop its spread—save yourself many dollars. Write for folder on MASTITIS. E. R. Squibb & Sons, Veterinary & Animal Feeding Products Division, Dept. AA12, 745 Fifth Avenue, New York, N. Y.

*due to *Streptococcus agalactiae*, the cause of the largest percentage of all mastitis cases.

Herschel Newsom of Indiana Elected National Grange Master

MEETING in a howling sub-zero snow storm delegates at the 84th Session of the National Grange paid tribute to its late master by establishing the "Albert S. Goss Grange Membership Memorial" with a pledge of one million Grange members by June 30. This Memorial was described "as the most appropriate tribute to the man who loved, lived and died for the Grange in order to build a stronger rural America and a world in which the freedom and dignity of the individual is supreme."

Henry Sherwood, master of the New York State Grange on whose shoulders fell the responsibility of carrying on until a new National Master was elected, did the task admirably, and as one man who was at the convention said, "His stature increased greatly during the session."

Herschel Newsom, 45-year-old master of the Indiana State Grange and chairman of the National Grange Executive Committee, was elected as National Master to fill the unexpired term of one year. Replacing him on the Executive Committee is Dorsey Kirk, master of the Illinois State Grange. Henry Carstensen, master of the Washington State Grange was returned to the Executive Committee and will be the new chairman.

A Defense Program

The Grange offered an 8-point defense program as follows:

1. The building, through conscription, of a strong military force to repel attacks.
2. Development of a sound tax system; prevention of war profiteering.
3. Financing of war costs as far as possible from current taxes; an austerity program, both personal and governmental.
4. Allocation of critical materials by compulsion if voluntary methods fail.
5. Attack of inflation at its source through relation of supply of money to goods.
6. Rationing when the supply of any goods become short.
7. Control of prices, supplemented by rationing, if rationing alone fails to prevent profiteering.
8. Control of wages, prices and profits together, across the board, if necessary to prevent inflation.

The delegates affirmed their support of a program designed for maximum preservation of private enterprise and personal freedom and declared that controls which interfere with normal production should be held at a minimum consistent with needed defense

efforts. They re-affirmed their support of parity prices calculated at a level fair both to producers and consumers; also the removal of farm programs from politics.

Resolutions

By resolution the Grange favored:

Private ownership and operation of public transportation facilities.

Strict enforcement laws on all highways.

Limiting the draft deferment of farm boys to those especially skilled in critical field of operation.

Statehood for Alaska and Hawaii.

So far as feasible, a pay-as-you-go defense program.

Legislation to make standard time mandatory.

Social security for all farm workers and farm operators.

Legislation to encourage cooperative health programs as opposed to socialized medicine and all forms of compulsory health insurance.

Federal aid for education in elementary and secondary schools with probable safeguards against control and interference by Federal agencies or officials.

Legislation to make the extension service financially independent of all farm organizations.

The Grange defended the right of farmers to market their commodities, purchase farm supplies, and to perform necessary services for themselves on a cooperative, non-profit basis.

Centralized Government Opposed

The Grange warned of a menacing drift toward over-centralization of government at the national level, and called for the creation by Congress of a bipartisan commission to study the situation and make recommendations on all existing legislation considered detrimental to the working of our system of free enterprise and the American way of life.

Also recommended was legislation to combat the spread of communism including a careful study of the McCarran Bill passed by the last Congress, plus continued support of United Nations efforts toward halting aggression, the maintenance of an adequate United Nations police force and the expansion of the powers of the International Court of Justice.

There was great interest in the Sears-Roebuck-Grange Community Service Contest and the Northeast fared very well. Capital Grange of Dover, Delaware, won the first prize of \$15,000. West Tisbury Grange of Dukes Co., Mass., was fourth and received \$1,000. Greene Grange, Chenango Co., N. Y., won honorable mention.

Self-Feeding HAYMAKER

Cut labor costs! Widespread interest is being shown by dairymen and cattlemen in this efficient new MARTIN method of curing and handling chopped hay. No carting... no pitchfork labor... plenty of pasture-fresh GREEN hay always available. Increase milk or beef production... slash feed and labor costs with the Martin Self-Feeding Haymaker!

TWO ¢-A-DAY PROTECTION BEFORE

CALVING

It's so valuable... yet so cheap! The Drugs, Iron, Iodine, Cobalt, Calcium, Phosphorus and Vitamin D that form the Kow-Kare conditioning formula are a common-sense precaution at freshening time. Cows about to calve often harbor weaknesses that are not apparent until disasters occur. Add Kow-Kare to the feed of every freshening cow; also of cows "off feed," cows forced for high production. 2¢ a day is a small price to pay for peace of mind. At all farm-supply dealers. FREE BOOK, "Care and Feeding of Dairy Cattle." Write for your copy today.

Dairy Asso. Co., Inc., Lyndonville 12, Vermont

TWO LAMBS A YEAR

A typical range ewe at left is shown with her January lamb, center, and her little July lamb. The second lamb was born out of season as result of hormone treatment experiment directed by Garvey L. Haydon, right, manager of Armour and Company's lamb department. Man on left is Herdsman Jack Dennis who had charge of more than 300 ewes bred in experiment. The ewe and her lambs show different breedings. Miscellaneous lots of sheep were used intentionally in first experiment. Tests of two lamb crop plan will be made on pure breds later.

WINTER HINTS for Dairy and Livestock

WASHING MILKING MACHINE

The first step in sterilizing a milking machine is to get it thoroughly clean. Milk or dirt any place in a machine protects the bacteria and the disinfectant will be ineffective.

It is much easier to get a milking machine clean immediately after milking is done than it is when the machine is allowed to stand for even 15 minutes. Lukewarm water will loosen more of the milk from the machine than cold water, and after this is done the next step is to suck through the machine at least 1½ to 2 gallons of hot water to which a heaping tablespoon of good dairy washing powder or detergent has been added.

— A.A. —

UDDER CAPACITY

Experience has shown many a dairyman that judging the capacity of a cow's udder is a difficult thing to do. However, one thing that has been learned is that the pendulous udder which hangs below a cow's hocks is not necessarily the biggest and certainly not the best.

It is this type of udder which is prone to injury and therefore to mastitis. While an occasional cow with a pendulous udder may stay in the herd a long time, she will be the exception. Look for the cow with a well-supported udder attached well up behind and well forward.

— A.A. —

A BUTCHERING HELP

A neighbor who had a power shovel and fork on his tractor had some porkers to dress; so to avoid the hard work of scalding and hanging them up by hand, he just hitched his power lift to them and raised them up and down in the scalding barrel. Then when they were all dressed, he ran his tractor with the porker attached to an apple tree, where it was hung to cool.

—Ralph A. Warner, Greene, N. Y.

— A.A. —

BULL VALUE

An excellent judge of dairy cattle once told me of the dairyman who came to him looking for a herd sire. In describing the kind of a sire he wanted, he enumerated all the good qualities that a bull could possibly have. When my friend asked how much he wanted to pay the reply was, "about \$100."

"If I could have found such a bull calf," the story teller concluded, "I would have been willing to pay at least \$1,000 for him."

It is difficult to figure just what a bull is worth. If he doesn't maintain the average of your herd he is worth nothing or less, except for beef, but if

he has the ability to increase production the chances are that he is worth more to you than he will cost.

— A.A. —

SALESMANSHIP

If you have beef cattle to sell, be a good salesman. Let people know you have good cattle. Don't depend upon the cattle to sell themselves.

Join your breed association; attend beef cattle meetings and get acquainted with other people in your profession; show at the fair; consign cattle to your association sales; advertise through farm and breed papers; try and make every sale mean another satisfied customer; place an attractive sign near the entrance to your place showing the name of your farm and the breed of cattle.—M. D. Lacy.

— A.A. —

SLAUGHTERING HOGS

Some skin 'em, some scald 'em, but everybody should chill the slaughtered hog promptly. Pulling the leaf or kidney fat loose from the inside of the carcass and splitting the hog down the backbone helps to speed chilling. Just as milk will sour, hogs too will sour if not chilled promptly. Safe chilling must be done below 40° F., better below 36° F. Cut and process the pork carcass as soon as it is cold and firm. Chilled pork carcasses should not be aged or allowed to hang before being placed in frozen storage.

—George H. Wellington

— A.A. —

TELLING THE AGE OF SHEEP

Lambs have eight incisor teeth which are much smaller than the permanent teeth. The middle pair of incisors are replaced by permanent teeth at about 12 to 24 months of age. A "two-tooth" sheep is called a yearling. On each side of these larger permanent teeth are three small lamb teeth which are shed later. A two-year-old sheep shows four permanent teeth; a three-year-old, six permanent teeth; and at four years of age all of the lamb teeth have been replaced by permanent teeth. Variations may occur.

After four years the age may only be estimated by the width of the teeth, their wear, and their firmness in the jaw. "Solid-mouthed" ewes are over four years with all teeth present and close together. As the teeth wear down they move outward from the jaw. "Spreaders" are sheep showing such wear. "Broken-mouthed" sheep have lost part of their teeth; if they are all gone, they are called "gummers."

—George R. Johnson

A DUTCHESS COUNTY, NEW YORK, 4-H WINNER

The accompanying picture shows Gilbert Baright of Pond Vale Farm, Poughkeepsie, N. Y., and his senior Guernsey yearling heifer, Hagan Farms Sue.

Gilbert's heifer won 4-H champion in the county and junior and grand champion in the open class. At the Syracuse State Fair, she won junior champion in the open class and 4-H grand champion. Later, at the International Dairy Exposition

in Indianapolis, Ind., she received a blue ribbon and gold emblem in a 4-H show, and also won junior championship in the open class.

About Buying PULLETS

By L. E. WEAVER

THE other evening a man called me up and asked what would be a fair price for black crossbred pullets ready to lay. He wanted to buy about a hundred and had found a man with pullets for sale. About this time every year the same question comes up, so perhaps it will be helpful if I set down a few suggestions about buying pullets, even though I must continue to refuse to stick my neck out and set prices for other people's stock.

COST OF GROWING: Of course you want to allow the grower a reasonable margin above actual cost for growing the pullets. What did it cost him to grow his pullets? We can get pretty close to a correct answer to that question, thanks to the Department of Agricultural Economics at Cornell. Back in 1941, Dr. Darrah studied the records of 120 poultry farms in New York State. The average amount of mash needed to grow a leghorn pullet (sexed) to laying age was 12.6 pounds, and the average amount of grain was 10.1 pounds. It took more to grow the heavier pullets like Plymouth Rocks, Rhode Island Reds and black crossbreds; 20.1 pounds of mash and 10.9 pounds of grain.

Three years ago they made another survey study, and the chickens were eating just about the same amount of mash and grain as ten years ago. Nothing unusual about that. The cost of feed was just a little under one-half the entire cost of growing a pullet. By the time you have paid for the chicks (Darrah found that it took about 114 sexed Leghorn pullet chicks or 110 sexed heavy chicks to give you 100 pullets in the fall) and the fuel for the brooder, the litter and perhaps a few tablets to put in the drinking water, and have charged a year's use of the brooder houses and shelters and equipment, the total will be about three-quarters of the cost of the feed.

Now in order to complete the picture you will have to set a price on your own time. Darrah found that it took 32.4 minutes of the owner's time to grow a leghorn pullet, 39 minutes for heavy pullets. At a dollar an hour that is 1 1/2 cents a minute or a labor cost of either 54 or 65 cents a pullet. If your time is not worth a dollar an hour, perhaps you had better get a job in a garage.

Now fill in the blanks below and you can make your own estimate of what it cost to grow a pullet in 1950.

12.6 or 20.1	pounds of mash @	c per pound.....
10.1 or 10.9	pounds of grain @	c per pound.....
Total cost of feed.....		
Chicks, litter, etc. (1/4 cost of feed total above).....		
Leghorns—32	minutes of labor @per hr.....	
Heavies—39		
Total.....		

OTHER CONSIDERATIONS ARE IMPORTANT: If I were buying pullets that I hoped would pay for themselves and give me a good return on the time and labor I spent on them, I would be more concerned about how well they were raised, and from what ancestry they came, than what I had to pay for them. Those are two exceedingly vital considerations. The crossbred pullets that my good friend had located had parents from two excellent laying strains. Both had years of high ranking in egg laying tests.

So next I asked, "Were these pullets

started on a farm where there were no old hens, or at least where no laying hens were near?" He didn't know. It is my opinion that if he finds they were started and grown "in isolation," that is, separated a quarter of a mile or more from all older stock, the chances are good that losses by death will be normal. But if they were exposed to the Leucosis group of diseases through having been brooded and reared near older birds, he is running a great risk of heavy mortality and disappointment.

I believe that no flock today is entirely free of these diseases, and the infection seems to float through the air with the greatest of ease, and for fairly great distances. Of course, some strains have a larger percentage of resistance to these diseases than others. The joker there is that it's hard to find such strains.

— A. A. —

WHAT IS YOUR EGG ROOM RATING?

1. Is your egg room conveniently located for incoming eggs and outgoing cases?
2. Can the room be kept between 50° and 65° F. the year round?
3. Is there provision for adding humidity to keep the room above 60% relative humidity?
4. Is the room clean and free of not-used articles?
5. Is there room for storing empty cases a week before packing?
6. Is there sufficient shelf or rack room to cool pails of eggs 12 hours before packing?
7. Is the packing table about 26 inches above the floor?
8. Is the grader raised high enough to allow 3 cases to be packed directly?
9. Are the spare flats and fillers stacked on a shelf above the grader and within easy reach?
10. Do you discard worn flats and fillers?
11. Do you clean dirty eggs and strive for a clean pack?
12. Do you re-nail second-hand cases?
13. Do you use a conveyor of some sort to load cases onto the trucks?
14. Do you keep market eggs a maximum of 4 days before shipping?
15. Do you ask visitors to "come and see my egg room?"—J. H. Vondell.

— A. A. —

Don't Change Litter in Cold Weather

By L. E. WEAVER

IN A current issue of an agricultural paper not published in the Northeast, I read this advice to poultrykeepers. "November is the month when forehanded poultry raisers get their flocks ready for the onslaught of winter.—If the litter has become damp, it is much easier to clean the chicken house now and to put in fresh litter than it will be a few weeks from now."

I don't agree. At so late a date clean new straw, shavings or what litter material have you, could not be broken down into the mulchy condition that is necessary if it is to remain reasonably dry, before steady cold weather sets in. If the pen had been cleaned out and new litter put in last July or August, and more litter added 2 or 3 times since then a fairly deep

layer of built-up litter would have been there by November. But it is too late for that now and it was too late in November. My idea of what to do is to try out this very practical plan of using the old litter, or part of it, another season—unless there have been heavy losses of hens from disease, or roundworms have been a problem.

I would loosen up all packed-down litter and throw it out. Also, any other that is lumpy or wet, leaving only the fine, dry, loose material that the hens enjoy dusting in. I would like this to be about six inches deep, or even more. Then I would put in a generous layer of straw or other new litter material on top of the dry mulch.

The practice of re-using old litter that is in a fine dry condition is well past the experimental stage. Many poultrykeepers have tried it and I don't remember hearing anyone say that he regretted it, or was going back to the old plan of a once-a-year complete clean-out. Furthermore, from the Ohio Experiment Station at Wooster, we have plenty of evidence that mortality is not any greater where old litter is used over and over. In fact, it usually is lower. And they tell us that if your mash is a little low in the Animal Protein Factor, it won't be too serious because the hens can get plenty from the old litter. And think how much less time and labor it takes. I am quite sure also that the litter will stay drier longer and the eggs will be cleaner.

Of course if the roof leaks or a lot of rain or snow blows in so that the litter gets soggy, you will have no choice but to clean it out and start over with new litter. What I have been trying to say is that under normal conditions of ventilation you can re-use your old litter and add a little that is new from time to time, and by doing so you will have less trouble with wet litter.

The Settlers

BY E. R. EASTMAN

What Readers Say:

"THE SETTLERS is a masterpiece! Truly you have portrayed real pioneer life, sacrifices, devotion and emotions clearly and historically."

E. D. C., Ripley, N. Y.

"I want to tell you how much I enjoyed THE SETTLERS—especially because my ancestors made practically the same trip in 1807."

F. L. W., Leroy, N. Y.

"THE SETTLERS is one of the best stories I have read."

W. S. L., Baltic, Conn.

"We have learned a great deal from THE SETTLERS of what our ancestors had to sacrifice and live through."

Mrs. J. A. A., Winchester, N. H.

"You think and live with your characters in THE SETTLERS. They are real beings to you. We readers have the same feeling."

S. L. B., Walden, N. Y.

"We wish to congratulate you on THE SETTLERS. We are glad we all had the privilege of reading it."

A. K. P. and family, Lebanon, N. H.

"I feel lonesome to be separated from the people you introduced me to in THE SETTLERS."

G. W. S.
Plymouth, N. Y.

"Loved THE SETTLERS. Hope you write another story soon."

Mrs. G. E. S., Laurenceville, Pa.

"Good, clean, fast-moving story."

Rev. J. F., Ballston Spa, N. Y.

What the Critics Say:

"Life in the early days of the 19th century was rugged and often violent. Death was never very far away. Love wasn't glamorous, but it was real and honest and rewarding. How people of those years lived and died is told in Ed Eastman's new novel, THE SETTLERS . . . It is a story of hardship, of primitive living, of death on the trail and on the new farm and of some of the inglorious battles of the War of 1812 . . . It's an absorbing story."

—W. J. Waters,
Ithaca, N. Y., *Journal*

"THE SETTLERS makes an exceedingly valuable contribution to the supplementary reading material for high school American history students . . . The ideals, hopes and difficulties of the pioneers are presented in a manner to secure and hold the reader's interest."

—A. K. Getman, Ass't. Commissioner of
Vocational Education in New York State.

"In THE SETTLERS, E. R. Eastman deals with the strange urge that led so many to pick up their belongings and plod westward to possess the new land that had lately been the hunting ground of the Iroquois . . . Characters that live again make the reader revise the contribution of the settlers to the Northeast as no historian could hope to do. THE SETTLERS is an important addition to the epic of America."

—Romeyn Berry,
Farmer, author, commentator.

SAVE MONEY ON MILK CANS

If you want to keep down the bacteria count in your milk and cut down the wear and tear on your milk cans, here are a few simple rules that will help:

1. Handle milk cans carefully. They cost plenty. Be careful not to damage the inner tin lining, especially with stirring rods.
2. Wash them after every use. Dry them thoroughly. Place them upside-down, with the lids off, on a rack.
3. Use commercial cleaning compounds exactly as directed. Don't experiment with your own formulas.
4. Before each use, inspect the milk can carefully for bad dents, open seams, crevices or damaged lining.
5. Don't use milk cans if they have any of the defects listed above. Replace these damaged cans with new, sanitary ones.
6. Don't use milk or cream cans for carrying other liquids. Don't carry whey or skimmed milk in the same cans used for quality milk.
7. Don't take chances. If you are in doubt about using an old can, don't! It's safer, and more profitable, to use new cans in good condition.

Apple Growers Cooperate to Boost Processing Price

By L. B. SKEFFINGTON

THE new Western New York Apple Growers' Association appears to be hitting it off in good style. The other day I was talking with a Wayne County grower who said he was convinced that the prices paid by processors were at least 25 cents a hundredweight higher because of the association.

Lloyd Putnam, association secretary, says prices ranged up to \$3.25, \$2.75 being average for Number 1 grade.

A Niagara County grower said he had made up his mind that he would sell for \$2, when a buyer came along and offered \$2.50. Putnam says the good movement at the prices this year has been due to several things, including lowered stocks of apple sauce and good buying on the part of many processors. "Also," he added, "we think we did a good job of representing the growers." The association does not engage in bargaining, but keeps its members posted on changes and trends.

New Milk Formula?

The Division of Milk Control has before it a proposal of the Rochester Milk Producers Cooperative Bargaining Agency for a new Class 1 formula. At the hearing, it asked that the price be based on six factors: U. S. wholesale price index, butter-skimmilk prices, consumer price index, average consumption of milk in previous four months, costs of dairy farming, index of farm prices.

In asking that the formula be made effective Jan. 1, the agency also requested that the current Class 1 price of \$5.80 be a floor for the first four months of 1951. The formula provides for the customary spring and fall differentials of 40 cents below or above the formula. The Niagara Frontier producers' agency has petitioned that the Commissioner continue the \$5.80 Class 1 price through April and does not propose a formula.

Roy Gillette Passes

A familiar figure will be missing from the Winter trade shows. Roy

Gillette of Albion, 63, died in the Sodas hospital as the result of an automobile accident. Fatally injured, also, was George E. Smith of Albion, for years with the State Department of Agriculture. Gillette for 28 years had been with the John Deere Company, of which he was district sales manager.

Roughage for Lambs

A lot of lamb feeders have gone on the assumption that it took a lot of concentrate feed to finish them for market. Rufus S. Cox, head of the animal husbandry department at Kansas State College, told the 26th annual dinner of lamb feeders at Batavia that they can use more roughage profitably.

Cox said there is good demand for lambs, but the problem is to produce them economically. More roughage and less concentrate will do the job in a little longer time, he said.

Still Good Investment

H. B. Munger, president of the Farm Credit Administration of Springfield, told a meeting of Federal Land Bank officials and local farm loan associations at Rochester that a sound loan on a good farm continued to be a good investment. Some of the local directors urged that the mortgage loan limit be raised to give the Land Bank better competitive position.

The limit placed by Congress is 65 per cent of normal earning value. Wilson F. Mitchell of Ledyard, elected to the advisory committee, said he would work for raising this to 75 per cent. Carroll Hutchins, chief reviewing appraiser, explained that "normal" earning value of a farm was based on its capacity to pay off the loan over a 20-30 year period.

Munger said it was important not to saddle a farmer with more debt than he could pay from earnings. He also said the tendency was to loan more on good farms and less on poor farms. He said a farm that might look like a bargain might prove to be expensive when needed repairs were made.

Young Again Heads Milk Bargaining Agency

AT THE annual meeting of the Metropolitan Milk Producers Bargaining Agency at Syracuse, James A. Young was re-elected president; L. A. Chapin, vice president; A. D. Hakes, secretary, and G. Lester DuMont, treasurer. While Mr. Hakes will continue as secretary, he will not be a member of the executive committee.

William Storie of Bovina Center and Andrew Cochrane of Ripley were elected to the executive committee to succeed Mr. Hakes and Walter Wilkie of Amsterdam. Directors re-elected were: Andrew Cochrane, Ripley; James Mills, Kelsey, N. Y.; Paul Talbot, Burlington Flats; William Storie; Floyd Washburn, Cazenovia; and Herbert Seeley, Knoxville, Pa. Newly elected directors include Gordon Griswold, replacing Harold Griswold who died recently; J. Richard Padgett, replacing A. D. Hakes; Ivan Kinnan, replacing Ernest Hartley, Osceola, Pa.; and John Holloway, replacing Walter Wilkie, Amsterdam.

Resolutions

The following resolutions were passed:

That officers and directors of each agency urge producers to maintain and

increase milk production and to maintain a more even production throughout the year.

That the Commodity Credit Corporation be urged to set support prices of dairy products high enough to insure increased production needed for wartime needs.

That every effort be made to support order provisions providing for cooperative payments.

Opposing any revision of the Capper-Volstead Act which legalizes cooperatives. Supporting "Milk for Health."

Opposing any change in State laws to permit the sale of yellow oleo.

Recommending that State institutions use butter instead of oleo.

Opposing a Federal milk or cream inspection law.

Opposing socialized medicine.

Urging careful consideration of deferment of essential farm workers and farmer representation on rural draft boards.

Favoring continuation of school lunch program.

Brandt Speaks

Considering the exceedingly bad weather, the attendance was good. The principal speaker at Monday night's banquet was John Brandt, president of Land O'Lakes. He emphasized that it is the farmer's business to dispose of surplus farm products without any help from the government.

In his annual report President Young paid tribute to past president Frank

Snyder and pointed out that gains made by the Association can be maintained only by being alert and working together as a unit.

Secretary Hakes, in his report, expressed the belief that the two big accomplishments for last year were the adoption of formula—pricing for Class 1-A milk and the testimonial dinner for Dr. Blanford by which dairymen expressed their opposition to control of the orders by Washington.

Charles Baldwin, executive secretary, in his report, gave a concise factual history of the Agency which should be exceedingly valuable to the younger members.

— A. A. —

By J. F. "Doc" ROBERTS

BY SPRING the livestock and meat situation can become serious or good, depending on how you want to look at it.

For over a year now, meat animals have been gobbled up and apparently gobbled down as fast as they have appeared on our livestock markets. Prices have been consistently "firm," "strong" or "higher." Even through heavy marketings this fall, there has been no indication of any surplus at any time, and this is unusual.

High employment and high wages have again proved that our people are meat eaters when they can afford to buy it. While meat prices have been high, they have not been higher than wages or costs of other things, and that of course accounts for the continuous demand. Up to now, this situation with the law of supply and demand operating has worked out pretty satisfactorily.

Western range and our own pasture animals are now pretty much marketed. The animals left are being housed for breeding purposes or production. There can be no surplus now, and we can anticipate fewer animals coming to market in the next six months. The supply will be less, but what about the demand? When the demand greatly exceeds the supply, the situation is never good. Prices may skyrocket, but only a few benefit, and the general welfare of the livestock industry and the consuming public is harmed.

On top of this we are facing two very serious threats. The first is the threat of war, and the second is we are being told that "controls" will make more animals and therefore more meat.

Controls Do Not Work

Up to the present time the government has not been the deciding factor in the demand for meat. Given war or the spending of billions already appropriated, or a tremendous standing army, the people will get what is left after government demands are met. This is as it should be, but it will be a perfect set-up for imposing "controls."

The idea that controls should divide the meat supply equally and hold the price is fine, but we know from ex-

perience that it does not work.

We as a people have always handled our own problems, hiring or electing others to carry out the details. We envision our public officers as servants of the people, not a force over the people. If meat and livestock controls are dictated by politicians, which seems likely, then materially and morally another debacle will be upon us.

When we, as a people, decide that "controls" for all men, wages, profits, foods, and materials are a necessity to win a war, then, and only then, will "controls" be accepted and will they work.

It Sure Pays to Feed Farm Animals SALT PLUS!

Here's What STERLING BLUSALT Gives Them!

SALT... the most important mineral of them all.

COBALT... lack of cobalt causes loss of appetite and stunted growth of animals.

IODINE... regulates functions of thyroid gland and its secretion.

MANGANESE... helps prevent sterility... improves lactation.

IRON... essential for healthy red blood... helps prevent anemia.

COPPER... essential to convert iron into red blood cells.

ZINC... promotes longer life, better growth.

It's Christmas!

By
**LOUISE
PRICE
BELL**

ALTHOUGH, like everyone else, I see many elaborate, expensive Christmas decorations each year, I still claim that just as attractive ones can be made at very little expense. And when the cost has to be considered, as it does with most of us, that is pretty gratifying. Christmas greens, cut from our own or nearby trees, do a great deal toward making any room Christmasy, and even cuttings from the Christmas tree can be used in many ways—

over doors and windows, on mantel, around candles or creches, or as background for groups of dime store angels.

Such greens plus a few pine cones, or perhaps a pair of red and white striped stockings from the dime store or a bright red tin horn, will make any front door look like a holiday affair. Instead of satin ribbon for the bow, try bright red cellophane or oilcloth; they are less expensive and the oilcloth is very practical, will hold up under rain, sleet or snow.

Children are so important at this season that our family has established a custom that I think is worth passing on. Inside our front door, on a chest, we keep a large tray piled high with tiny packages, wrapped in red and green and tied with silver. These are sometimes toys from the dime store, sometimes candy canes, but they always delight the small callers, who make it a point to ask if "Santa lost anything out of his pack." Some of the toys are "three for ten," and even homemade cookies are sometimes used, wrapped in waxed paper and then in colored. Anything delights the small fry when wrapped gaily.

If it is the custom in your home to put all of the gifts on the tree, then why not arrange the greeting cards over the fireplace; or, if you pile gifts under the tree, it's fun to attach cards to tree branches, and then, even after the Big Day, the tree still looks far from barren.

All gifts have an added importance if they are attractively wrapped, and gay wrappings need not be expensive to look pretty elegant. Ingenuity is far more important than cash at Yuletide; and homemade jams, jellies and fruit cakes can take on a really glamorous air when camouflaged in an intriguing way.

There are many interesting materials and a wide range of colors and patterns to select wrappings from, but we have found that even plain papers can form the basis for some stunning boxes. The secret is the gaily colored and designed Scotch tapes that have recently appeared, and with which all sorts of designs and letterings can be made on perfectly plain papers, or even on attractive boxes without any wrapping!

The Christmas dinner is pretty traditional, so I offer nothing new. But I

—Photo: Harold M. Lambert Studios

do think it is a wonderful idea to telephone your friends and neighbors and ask them to drop in at your house sometime Christmas Eve for a cup of coffee and a Christmas cookie or two. No matter how busy a household is, there are always plenty of cookies and sweets on hand, and it isn't much trouble to make coffee, mix up a cheese

spread to use on crackers, and set the table with red cambric cloth and green candles. "Open House" like this should include any newcomers to your neighborhood, people of all ages . . . your friends and your children's friends . . . and when the last person has gone you'll have a glow in your heart that friendship and warmth bring.

TO WRAP YOUR CHRISTMAS GIFT

By **EDITH SHAW BUTLER**

Stars and candles, sprigs of holly,
Santa Claus fat and jolly,
Snowflakes, cherubim with wings,
Christmas holds such lovely things!
Bells and reindeer, cones and pine,
How beautiful is each design!
Mistletoe, a Christmas dove,
To wrap the gift for one you love.

A Christmas Quiz is fun if you have a holiday party with games. Ask the questions or pass papers and pencils and allow a certain time for the players to answer, if you prefer. Give a small prize for the one who answers the most questions correctly:

Questions

1. What was the first Christmas carol sung?
2. From what country did the turkey originally come?
3. What is supposed to happen to folks who refuse mince pie on Christmas Day?
4. From what country did we get the custom of lighting candles in windows at Yuletide?
5. Who wrote "Silent Night"?
6. From what country do we get "wassail"?
7. In the early days in England, how long did the Yuletide festivities last?
8. From what place do we get gift-giving customs?
9. For how long, approximately, has Christmas been a legal holiday?
10. What does NOEL mean?

Answers

1. "Glory to God in the Highest."
2. South America.
3. They have bad luck all year.
4. From Ireland.
5. Hans Gruber.
6. From Sweden.
7. Twelve days.
8. Rome, Italy.
9. Since about 1850.
10. A carol.

When setting up your tree, don't forget to take a few simple precautions to reduce Christmas fire hazards. It's a good idea to set the tree in a pail or tub and pack wet sand around the trunk to hold it firmly in place. By adding water occasionally you can keep the sand moist while the tree is in the house.

Another good precaution is to anchor the tree to the wall behind it by running a wire from the tree to the molding, or you could fasten it to a nail concealed in the window casing. Trees have been known to tip over, either from being too heavily laden on the front side with gifts or from a flying leap made on to one of its branches by the family cat. If the tree is in a corner, and there happen to be windows on both sides of it, the wire should be run to each window. Use fine, invisible picture hanging wire, but be sure to put the wire high enough on the tree so that it is over the heads of persons passing under it.

WHAT'S GONE BEFORE

Deciding that he must answer Abe Lincoln's call for volunteers, Mark Wilson talks the matter over with his sweetheart, Ann Clinton, and they decide to marry immediately. The ceremony takes place that evening. Next morning Mark and Ann leave for the county seat, where Mark enlists and Ann returns home to fight the battle of loneliness and worry on the home front, supported by the love and sympathy of Nancy Wilson, Mark's mother, who maintains that wars are not won only by the soldiers but also by the women who keep the homes together.

The weeks pass, and one May day Ann learns from her ineffectual father that the bank has sold the mortgage on their farm to Henry Bain, a neighboring farmer of about 40 who is in love with Ann and hates Mark. Meanwhile, Charles Wilson, one of Mark's younger brothers, is rebelling against the monotony of the farm work and informs Enoch Payne, the hired man, that he will not stand for it much longer.

CHAPTER VIII

T IRED though he was that night, Charles was determined not to go to bed, for he knew that once he laid down he wouldn't wake until morning. Waiting until Tom was asleep and until he could hear no sound from downstairs, he hastily tied a few clothes in a bundle, and the bundle in one hand and his shoes in the other, crept down the stairs, stopping with every step to make sure that no one was waking, and putting his feet down as quietly as he could on the side of the steps because the middle boards squeaked.

Heart pounding, he finally reached the bottom of the stair and raised the latch of the door that opened into the kitchen. Then he hesitated again, listening for a long time, fearing to waken his mother and father in their downstairs bedroom. Finally, reassured by the sound of his father snoring, he took two or three tentative steps into the kitchen, hit a chair in the dark, and was startled to hear his mother mutter something. But after waiting and listening he realized that she had spoken in her sleep, so he made his way at last to the outside door and stepped out into the night.

On the porch steps he sat down to put on his shoes. Then, with his bundle under his arm, he went down the path to the small gate that led to the country road in front of the house.

His heart did a somersault again when Dan, their old shepherd dog, rushed barking out of the woodshed where he always slept with one eye open and an ear cocked to catch any unusual sound. The boy sank down by the side of the yard fence and threw his arms around the dog, burying his head in his deep fur and hugging him to his chest. At the same time he strained his ears for any sounds from the house, but apparently the barking had aroused no one. All remained quiet and in a few moments Charlie got to his feet, gave the dog a shove and ordered him in a low tone to "Go back!" Obedient though wistful, the dog slowly retreated to the shed and Charlie picked up his bundle and started plodding down the road.

A few rods away he turned to look at the old house and barn, shadowy in the dark. With a lump in his throat he raised his hand in farewell and turned again to trudge resolutely down the

road which led through Jenkstown to Newark Valley and Owego. He had set his feet to war and had no intention of turning back.

Near the end of the farm was a little cemetery where the neighborhood dead had been laid to rest since the beginning of the settlement. Charlie had worked in the field around the burial ground from the time he was a small boy, and he and his boyhood friends had played carelessly among the graves, their bare feet in the green myrtle that mantled the whole cemetery; but now in the dead of the night everything somehow seemed different. Strange black objects that he couldn't distinguish loomed along the fences and in the adjoining fields. As he passed the cemetery he was conscious of the quiet sleepers there as he never had been before, and he was disturbed by the thought that maybe at this time of night they weren't so quiet. Overhead an owl on the branch of a maple tree that bordered the cemetery suddenly let out a mournful hoot. With chills chasing down his spine, and feeling that a ghostly hand was reaching out to grab him around the neck, Charles started to run. Well down the road and completely out of breath he stopped and sat down on a grassy knoll, a little ashamed and amused at his own cowardice.

"Some soldier I'll make!" he told himself, disgustedly.

When he had recovered his breath he got up and plodded on again, but after several miles more he felt as if he couldn't take another step. Up at dawn

to help with the chores, working all day planting corn, chores again at night on top of everything else, sleepless and emotionally upset, Charlie knew that he had never before been so tired. But it was too cold to stop long by the roadside.

He had to resist the temptation to turn back home. Anyway, he told himself, it was almost as far to go back as it was to go on. So he forced his lagging legs to drag on step by step, mile after mile, till the only thing that mattered seemed to be to lift one foot and put it ahead of the other. Occasionally a strange dog would rush at him, barking, then slink back, tail between his legs, as Charlie spoke to him. The boy welcomed these interruptions, for they helped to break the monotony of that long walk.

The night wore on, and at last the miles were covered and light began to show on his left over the eastern hills. Then came the familiar, homey sound of a rooster crowing. Coming finally to The Narrows, where the hill came down to the road and a deep bank pitched off the other side into the creek, he knew that he was nearing Owego. That and the dawn gave him his second wind. A little later he reached the small park surrounding the Court House in Owego. There he almost fell on one of the park benches and, in spite of the chill air, was instantly asleep.

When he awoke, the sun was dappling the green of the park lawn and it was warm. It took him a moment to orient himself. He wondered what they had thought at home when they missed him, and then realizing how hungry he was he stood up, a little stiff at first from his walk, and looked around. In his pocket he fingered the few coins he had managed to save, and started to walk around the streets until he finally came to the little hotel where Mark and Ann had stayed. Here for two shillings he got a breakfast of buckwheat pancakes, maple sirup, sausage, fried potatoes, coffee and doughnuts. He ate until it seemed that he never again would have room for anything more.

When he paid the proprietor for his breakfast, he inquired a little diffidently where he could join the army. The old man pushed his spectacles further

down on his nose and looked at the boy with kind grey eyes for a long moment before answering:

"So you've got the idea, too. Pretty soon Uncle Abe will have all the boys. Well, the office is right on this same street. You can't miss it."

Then coming around the end of the counter, he stuck out a hairy hand and said:

"Shake, son! I wish you luck!"

Charlie left the hotel and as he walked along Front Street toward the recruiting office, he was of two minds. Lonesome and homesick, he almost turned off on North Avenue to start the long trek back home. Irresolutely he stopped to watch the broad Susquehanna, mist covered, flowing south and into the unknown. Then, with a deep sigh that was close to tears, he lifted his chin, squared his shoulders, and set off briskly up the street to the recruiting office.

That same morning in the three-quarter bed that George and Nancy Wilson shared, George awoke with the first light of dawn streaming in through the single window of the little bedroom off the farmhouse kitchen. His first thought was of Mark, then remembering the responsibilities of the farm, he reluctantly stuck one foot out into the chill of the early morning, then the other. Pulling on his pants, shirt and socks, he carried his heavy shoes into the kitchen so as to let Nancy rest for a few minutes longer. With his big jackknife he whittled some pine shavings and soon had a fire started in the kitchen stove, filled the tea kettle with water from the pail in the sink and put on his hat and coat. Then he stepped to the stairway, opened the door and called:

"Charlie! Tom! Time to be up!"

Hearing no sound, after a couple of minutes he called again, more sharply, and Tom answered:

"Charlie's up. He isn't here."

Surprised and a little pleased that Charles would show enough responsibility to get up by himself and get to the barn chores early, George said to Tom:

"Well, you come on and help, too."

Then he went out to the barn, but in the long cow stable he saw no sign of Charlie. A little disturbed feeling crept into his mind and he went around onto the big barn floor, thinking that perhaps Charlie was there pitching down the hay for the morning feeding. But here again there was no sign or sound. Somewhat alarmed now, thinking that the boy might have been hurt, George made a thorough search of the premises. Then, work forgotten, he quickly returned to the house, passed Nancy just coming out of the bedroom all ready to get breakfast, opened the stair door and ran up the steps into the chamber where the boys slept. There he found Tom hastily pulling on his pants, but no sign of Charlie.

"Did Charlie go to bed when you did last night?" he asked Tom.

"No. He was settin' in that little chair there when I went to sleep."

"Don't you remember his being in bed with you in the night?"

"No, I don't," said Tom. "Why should I? I was asleep. Why? What's the matter?"

Without answering, his father turned and ran downstairs. To Nancy's inquiring look he said:

"Charles isn't at the barn or upstairs. I think he's gone."

Nancy sat down abruptly in a chair. "Gone!" she exclaimed. "What do you mean, gone?"

"He's been talking war lately. I thought it was just talk, but I'm afraid he has slipped off to Owego."

"But how could that be possible? How could he walk all that distance after working all day?"

"I don't know, but where else could he have gone?"

Nancy was recovering from the first shock. She got up and went on with

getting breakfast.

"Go on and do your chores," she said. "Probably he has just gone to the neighbors' to stay all night. He likes Ann awfully well. Maybe he's gone over there."

"Don't believe it. He's been grumbling ever since Mark left. He didn't like to work."

"I know he didn't. What boy does? Nevertheless, he always did his share."

Nancy's own worry was forgotten for the moment in her sympathy for her husband. It took a lot to make his voice tremble. Sometimes he was stern with the boys, but she knew the strong affection he had for them.

"I tell you," she said, a little sharply to cover up her feelings, "go on and do your chores. Likely before you're done he'll be back to help finish them."

Shoulders sagging a little, George obediently went out of the kitchen and down the path to the barn, closely followed by Tom who, scared and worried, was more than willing to do Charlie's share of the chores as well as his own.

Sensing the strain, the children around the table that morning were

CHRISTMAS WEEK

By Eleanor Alletta Chaffee

The forest has invaded the city street; The unfamiliar scent of balsam drifts On crystal air, and slows the hurrying feet.

Many a mind turns back where memory lifts

Curtains of time above a country hill, A pine, a smooth white stretch of snow, a pane

Framing the glow of firelight, where the still

Rich tide of living moved. The winding lane

Toward home held pine bough fragrance, sweet and deep;

This is like something only seen in sleep.

very quiet. Nancy had told the girls that Charlie was gone, and when they asked where, she said they didn't know but maybe to enlist like Mark had. George drank his coffee, ate a pancake, and then suddenly pushed back his chair. Looking across at his wife, he exclaimed:

"I'm going after him. He's only 16. That's too young and I'm going to bring him back."

Nancy replied:

"Whatever you think best, Mr. Wilson. But remember that Charlie is no longer a child. He has grown up, and if we force him against his will that will not be good, either."

Then she smiled sadly:

"I'll bet right now he's homesick and sorry for what he has done. Maybe a little gentle reasoning will do a lot more with him than an order. If he has enlisted," she added, "maybe you'll be too late anyway. Maybe he's being sent South today."

"That's a chance I've got to take," he replied. "I'll get started just as soon as I can finish the chores."

Some time in the middle of the afternoon George found his son sitting on the bench in the little park where he had had his brief nap in the morning. At sight of his father Charlie jumped eagerly to his feet. Then realizing that perhaps he was due for a lecture, his face clouded and he sank back on to the seat again. George stood looking down at him for a moment and then sat down beside him. For the first time Charles could remember, his father put

an arm over his shoulders. That melted all of the resistance in the boy's heart, his eyes misted, and a lump came into his throat.

"Do you think, son, that you did just the right thing sneaking away in the night without saying goodbye to us, particularly to your mother?"

"Well—if I'd told you, you know you wouldn't have let me go."

"Maybe I won't now," smiled his father.

"I've got to go now. I've enlisted."

"Yes, but what did you tell the officer about your age?"

Charlie hesitated:

"I told him I was 18. I'm big, you know, and he didn't question it."

"I guess they don't question much anyway. They need men. But the officer would not let you go if I told him you were only 16."

Charles did not answer, and his father continued:

"But I'm not going to. When are they shipping you out?"

"I don't know," said Charlie. "He said it would be several days."

"Well, as I said, I'm not going to get you out," repeated his father, "but I am going to ask you to come back home and say goodbye to your mother."

Charles' face brightened:

"Of course I will, Pa. I want to! I'll be glad to!"

"All right," George said, getting briskly to his feet. "I've got an errand or two. Old Molly is over in the livery stable. You go over there and I'll be around in a few minutes and we'll be on our way back home."

Charlie certainly would have been surprised if he could have followed his father, for George made his way straight to the recruiting office. He found the old sergeant with his chair tipped back against the wall, his feet on the table, smoking a cigar. George introduced himself, stated that he had two sons who had enlisted, the latest no longer ago than this morning.

"What I'm here for," he said, "is to get a little information."

Remembering Charlie and his youthful appearance, the sergeant scowled, thinking that the father was going to make trouble. But his visitor's next question surprised him.

"How bad is this situation? Do you think it calls for every able-bodied man?"

"Yes, sir," was the sergeant's answer. "It's a bad job. Some think this mess is goin' to be over in three months; my guess is three years. Why?"

"Well, I got to thinking that maybe I ought to go, too."

"You a farmer?"

"Yes."

"The Army's got to eat. Somebody's got to raise the stuff. You ain't so young, either. But one thing's sure," he added, "the more men we can put down there in a hurry, the quicker they'll all be home. So I'll sign you up if you wish."

"No-o-o—" George hesitated. "Not today. I'd have to make some changes at home. But maybe later."

All the way home that afternoon, Charles, pleased at the way that events had shaped themselves and glad that he was going to see his mother again and that he had his father's approval, wanted to talk. But he got little response from his father, who seemed to be fully occupied with his own thoughts. (To be continued)

CONSUMERS SEE MILK ADS

Every day New York consumers are seeing the ads of two milk advertising campaigns. One is that of the American Dairy Association which is using three dimensional neon illuminated signs to tell subway riders to "stop to refresh" and "keep going with milk."

Safeway Stores, a chain store which is buying milk from the Dairywomen's League, is advertising milk with big posters 60" x 46".

Brings in Programs

Where Others Miss!

Brand New Zenith
"Super-Medallion"
with Super-Sensitive
Zenith FM and
Long-Distance AM

DAY OR NIGHT, summer or winter, Zenith's new Super-Sensitive FM brings you more stations, more programs, all beautifully clear and static-free. Super-Sensitive FM really "reaches" for distance . . . plays where AM radios and many FM sets are practically useless. Brings you sports, news, weather and market reports—a whole new world of entertainment on FM.

Also, its superior Zenith® tuning circuits prevent station drifting or fading. Its Zenith-built speaker gives you all of FM's superior tonal beauty at its best. And thanks to Zenith's built-in FM antenna you can plug in and play in primary signal areas.

All this, plus Zenith's famous Long-Distance® AM reception. New giant dial for easy tuning. Rich walnut plastic cabinet. AC, DC. Hear it now—at your Zenith radio and television dealer's.

FM Set-Owners:

Don't miss the fine programs offered by FM stations of the Rural Radio Network, including the famous

WQXR Concerts

of classical and semi-classical music plus hourly news reports prepared by the New York Times, now broadcast 7:30-11:06 p.m. Mondays thru Saturdays and 3:00-11:06 p.m. Sundays. The excellence of these programs deserves the superior clear-toned, static-free reception provided by super sensitive Zenith FM.

Christmas Star Pudding melts in your mouth!

Christmas Desserts

A GOOD molded dessert that goes well with a hearty holiday dinner is Christmas Star Pudding. It adds an extra festive note and can be made ahead and stored in the refrigerator ready for use.

CHRISTMAS STAR PUDDING

- 1 tablespoon unflavored gelatin
- 1/2 cup cold milk
- 1/4 cup sugar
- 1/4 teaspoon salt
- 1 cup sliced, pitted dates
- 1 1/2 cups milk
- 1/4 cup sliced, candied cherries
- 1/4 cup slivered, blanched almonds
- 1/2 teaspoon vanilla
- 1/4 teaspoon almond flavoring
- 1/2 cup whipped cream

Soak gelatin in 1/2 cup cold milk about 5 minutes. Combine sugar, salt,

dates and 1 1/2 cups milk, and heat together to scalding. Remove from heat, add gelatin and stir to dissolve. Chill mixture until it begins to set. Stir in fruits and flavorings. Whip cream and fold in. Turn into individual star molds or a 1-quart mold that has been rinsed in cold water. Chill until set. Serve with whipped cream. Serves 6.

The following recipe makes two large plum puddings, enough for 24 servings. They will keep for weeks if wrapped in heavy waxed paper and stored in a cool place.

PLUM PUDDING

- 1 lb. seedless raisins
- 1 lb. currants
- 1/4 cup chopped nut meats
- 2 1/2 cups sifted all-purpose flour
- 2 teaspoons baking soda
- 1 teaspoon cloves
- 1 teaspoon allspice
- 1 teaspoon nutmeg
- 1 teaspoon cinnamon
- 2 teaspoons salt
- 4 eggs
- 1 cup sugar
- 2 cups New Orleans molasses
- 2 cups buttermilk
- 1 1/2 cups finely chopped suet
- 1/2 cup grape juice
- 2 1/2 cups fine dry bread crumbs

Hard sauce

Clean raisins and currants; combine with nut meats. Dredge with 1 cup flour. Sift remaining flour, baking soda, cloves, allspice, nutmeg, cinnamon and salt. Beat eggs; add sugar, molasses, buttermilk, suet, grape juice and crumbs. Add raisin mixture; mix well. Add flour mixture; mix well. Pour into two greased 3-lb. molds. Cover; steam 3 hours. Cool puddings, wrap in heavy waxed paper; store in a cool place. Re-steam to heat. Serve hot with sauce. Each pudding serves 12.

To steam puddings successfully, make

sure that molds have tightly fitting covers. Coffee cans make excellent pudding molds, provided they do not leak. Inside of mold and cover must be well buttered to prevent sticking.

Never fill molds more than 3/4 full of batter. The cover must be tight, so steam can't enter mold and cause sog-giness. Set mold on rack (or old flat plate) on bottom of kettle containing enough actively boiling water to cover bottom third of mold, leaving two-thirds above water line.

Cover kettle and let water boil hard for 1/2 hour, then boil gently for remainder of time. If the water gets low, add boiling water as necessary, and be sure it never stops boiling. Time your pudding (either when first steaming or when re-steaming) so that it may cook up to the last minute before it is served. It takes about one-half hour to reheat a steamed pudding.

For very small puddings, a double boiler, well buttered and tightly covered, may be used.

HARD SAUCE

- 1/2 cup butter
 - 1 cup powdered, granulated or brown sugar
 - 1 teaspoon vanilla or other flavoring
- Cream butter until very soft; blend in sugar gradually. Add vanilla. A tablespoon of thick cream may be added to soften it. Set in a cool place until ready to use.

CHRISTMAS EVE

By Eleanor Alletta Chaffee

Who will sing carols in the church tonight?
So many faces stare back at a sky
Strange and unfamiliar; so many lie
Dreaming of other Christmas Eves made
bright

By faces loved. The music drifts above
The bowed heads and the supplicating
prayers.

There are so many quiet empty chairs,
So many hearts that hold their unspent
love.

Who will sing carols in this church tonight
While hope and longing rise in circling
flight?

HOME ACCIDENTS

More home accidents take place outside the house than in any one room, say safety experts. Here are some hazards to look for: Badly guarded or rickety outside steps; porches and terraces without rails; slippery, uneven walks; unprotected cisterns, wells and compost pits; unfenced pools and streams; rusty nails or broken glass left lying around.

Ideas for Now

No. 2285. Circular skirted jumper, where with aplomb—thanks to the bolero and blouse all come in one pattern! Sizes 2-8. Size 4 suit, 1 3/8 yds. 54-inch. Blouse, 1 3/8 yds. 35-inch fabric.

No. 2911. Back-wrapped slim dress is good three ways—easy to make, a joy to launder and iron, quick to slip into. Sizes 12-20, 36-46. Size 18, 5 1/8 yds. 35-in.

No. 2256. Attractive, handy apron with pockets to hold clothespins or sewing odds and ends. Cut in one size. 1 3/8 yds. 35-in.; 3/8 yd. 35-in. contrasting.

NEW! IMPROVED! 3 WAYS BETTER

... say
prize-
winning
cooks!

"Easier to use", says Mrs. Anna G. MacLaughlin, West Warwick, R. I., winner at the 1949 State Grange Contest. "No waiting, no special directions to follow. I've never used any yeast I liked better."

"Faster dissolving", says Mrs. John Raymond, Rutland, Vermont, winner at the 1950 Rutland Fair. "You can't beat it for speed. Just combine it with water, stir well and presto! It's ready to use!"

"Faster rising", says Mrs. G.W. Hinderer, Reno, Pennsylvania, top winner at County and State Fairs. "It's more active than ever... I get quicker risings, finer results when I bake at home!"

PRIZE COOKS PREFER FLEISCHMANN'S YEAST

AMERICAN AGRICULTURIST COOK BOOK!

NOW at last we can tell you the secret we have been keeping for months: We have an *American Agriculturist* Cook Book for you, a collection of the best and most popular recipes printed in this paper for the past 25 years! It's entitled, **THE AMERICAN AGRICULTURIST TREASURY OF COUNTRY COOKERY**, and by arrangement with the publisher (Century House, Watkins Glen, N. Y.), we are able to offer it to our readers at a special pre-publication price of \$1.95 until January 1, 1951.

Grace Watkins Huckett, home editor of *American Agriculturist* from 1925 to 1950, spent a very busy summer preparing the cook book. First, she went over every issue of *American Agriculturist* published since 1925 and made a long list of the recipes she wanted to use. Every one had to be copied—some in our Ithaca office, some in Mrs. Huckett's home in Riverhead, Long Island—and then she edited, selected, modernized some of the older recipes, and even retested many. When the final copying was done and the manuscript shipped to us, the summer was gone.

In this cook book you will find treasured recipes for everything from hearty soups and main dishes to de-

licious desserts and preserves. In fact, this book really grew out of the hundreds of requests we have had from readers for copies of recipes they had saved from our pages and then, unfortunately, lost or mislaid. The book contains over 130 pages, with 2 columns of recipes on each page, and is attractively printed in brown ink on Manila paper. It's a sturdy cook book, filled with practical helps and recipes.

The recipes are divided into Main Dishes (poultry, game, meat, fish, eggs), with a time table for roasting

GRACE WATKINS HUCKETT

meats and poultry; Vegetables; Salads; Breads and Rolls; Desserts (puddings, ice creams, fruit desserts, custards, pies, cakes, brownies, cookies); Jams and Jellies; Pickles and Relishes; delicious Maple Treats; Cheese Dishes; Beverages; Herbs; Ready-Mixes, and Sandwiches. A handy, up-to-date guide for canning meats, vegetables and fruits is included; also, directions for making hard cheese.

The first chapter — Planning Your Meals — provides a dependable guide for good eating every day. You'll also find recipes used by prize winners in Grange baking contests, and some out-of-this-world recipes like Mrs. Huckett's famous watermelon pickles, maple angel food cake, and chocolate chip brownies.

We have printed only 2,500 copies of our cook book, so if you want a copy, we advise you not to delay in sending in your order. Also, we cannot guarantee the pre-publication price of \$1.95 after January 1. TO ORDER, write to AMERICAN AGRICULTURIST, Box 367-CC, Ithaca, N. Y., and enclose \$1.95 for each copy wanted. The book will be sent postpaid to you or to any person you designate.

Here is a suggestion for a double-barrelled Christmas gift: Send \$4.95 for THE AMERICAN AGRICULTURIST TREASURY OF COUNTRY COOKERY and E. R. Eastman's exciting novel, THE SETTLERS. Two wonderful Christmas gifts!

AMERICAN AGRICULTURIST,
Box 367-CC
Ithaca, New York.

Enclosed please find \$..... for which please send me copies of THE AMERICAN AGRICULTURIST TREASURY OF COUNTRY COOKERY at \$1.95 each, andcopies of THE SETTLERS by E. R. Eastman, at \$3.00 each.

BOWL-SHAPED TUB for fast washing

SUPER-DUTY WHEELS with SWING-AWAY TOP Easy to clean

This husky Speed Queen is built to take the "punishment" of heavy farm washings — to get badly soiled work clothes *really* clean — and to give faithful service over many years without annoying repair bills. Washes up to 7 full loads per hour. There is no farm washer more dependable — none more economical. See your Speed Queen dealer or write for literature to . . .

SPEED QUEEN CORPORATION, 44 Doty Street, Ripon, Wisconsin

It Calls for Compliments!

It's made with **DAVIS** "double action"

1-EGG CAKE

STEP I	1 3/4 cup Cake Flour 1 cup Sugar 3/4 tsp. Salt 1/3 cup Milk 1 Egg	1/3 cup Shortening (emulsified type such as Crisco, Spry or Swift's) 1 tsp. Vanilla	Combine and beat smooth (2-3 minutes) Stir in quickly Blend gradually into batter; then beat for 1 minute
STEP II	2 3/4 tps. DAVIS BAKING POWDER		
STEP III	1/2 cup Milk		

Bake in two 8-inch round pans for about 25 minutes at 365° F
Frost with Swel — chocolaty, creamy-smooth — another Davis product.

Davis DOUBLE ACTING BAKING POWDER

Try this quick-mix 1-egg cake. It's so easy! And Davis Double Acting Baking Powder gives it lightness and texture you'll be proud to sponsor! Double action means: the batter rises twice—first in the mixing bowl and again in the oven. That means super-lightness—even when you're delayed getting it in the oven. Try it! Send for set of "Quick-Mix" Charts: R. B. Davis Co., Dept. AA-3, Hoboken, N. J.

GIVES A **LIFT** TO YOUR BAKING

SUNNYGABLES NOTES

By John Babcock

DECEMBER is usually the month when we look back over the past year to add up what we did wrong and what we did right at Sunnygables. This gives us a basis for making the next year's plans.

As I write this, it is about the first of December. There are so many things around the farm that are up in the air that we can scarcely plan ahead until we see how they develop.

With supports coming off eggs on the first of January, we may find that our poultry venture this year was not worth taking on. The rather uncertain and not too favorable market to date makes us a little skeptical. The other unsolved problem, and by far the biggest one, is how we will handle next year's forage. Another month should give us the answer as to whether we were wise in putting long, first cutting alfalfa and brome grass into a trench.

LONG GRASS SILAGE

This spring, we used a mowing machine, hayloader and an old truck to fill a trench dug into the hill next to the barn with all of our first cutting hay. As grass was dumped into the trench, the truck did its own packing. The truck got stuck a few times, but by the time the silo was full, we had learned how to handle long grass cheaply and easily.

FIRST MISTAKES

The first thing we learned was that a trench, whether it is filled with long or chopped material, should be filled gradually along its entire length. We filled from one end toward the other, making the "loaf" longer as the first end of the trench was filled full. The trouble with this system was that the end of the trench filled last was not packed enough. Had we filled with thin layers running the entire length, this would not have happened.

Our poor judgment first showed up when the end last filled settled below ground level, despite as much heaping as possible. The whole silo had by then been covered with limestone, so nothing could be done. The dip formed below ground level, took in a lot of surface water, and as we suspected earlier, caused a lot of spoilage in that end of the trench.

We have since found that another early mistake was to dump the loads without taking care to place them carefully. If any of you have ever tried to pull long hay out of a mow where a lazy hired man failed to pull the forkfuls apart as he mowed away, you know what a job it is to pull the hay out during the winter. We have a similar problem, in that as we cut down the face of the trench to remove silage, there are loads that run off at several different angles, making separation very difficult.

QUALITY TOPS

The most encouraging note, and by far the most important, is that our long grass silage is the best quality feed we have ever put up. This makes the other smaller problems a challenge.

Remembering the grass silage we have put up for 17 years running here

at Sunnygables, and from watching the cows go after it, I am convinced that it has the quality we are looking for.

Down in the trench, where we are hitting the best material, you can pick up a handful of alfalfa that is the nearest to fresh cut forage you could ask for. It is green, has a pleasing, wine-like odor, and more tenderness than it had when it was cut. Where stems of brome grass show up, the heads appear just as they did out in the field. Such quality could be duplicated, perhaps, in chopped grass silage, but there is just something extra satisfying about being able to pick up the whole plant with almost the same appearance it had the day it was cut. It is shaped like it had been pressed in a school-girl's souvenir book.

Best proof of quality is the way the cows go after long grass silage. On the days that our chopped silage has been substituted, it is half a day before they get hungry enough to eat it. They go after the long grass silage as soon as the wagon-bunk rolls onto the feeding floor.

HANDLING A PROBLEM

So far, we haven't hit on the best way to get the long grass out of the trench. Early this fall, Jack Conner and I went out with a hay knife to test our theory that sections could be easily sliced out and loaded on the wagon-bunks. We easily cut out a small core the depth of a hay knife, lifted it out of the top of the trench, and smiled triumphantly at each other.

I came back from a trip late in November to find that Jack was no longer smiling as he wielded the hay knife. In fact, he was downright disgusted. In what I hope is merely a human error that anyone could make, we had overlooked the fact that the silage was much harder packed near the bottom. Since the trench is better than 15 feet deep in places, the forage at the bottom is packed very hard. When you step on a section of it, there is just no give at all. And when you try to shove a hay knife down into the tightly packed mass, it is like sawing a green log with a rusty rip saw. The knife binds, bends, and refuses to cut.

We came closer to a solution when we started to take a smaller bite from the face of the trench. You might visualize a silo full of long grass as a loaf of bread. As we started to take slices from the loaf, they were too thick. That is what made the knife bind. Now, taking a slice only 18 inches thick, the material falls away from the face as it is cut off.

The knife still works very well near the top of the "loaf" where there isn't much packing. As we get on down, though, we use an axe to cut away the slices. To date, this is a hard job. The axe blade is not wide enough to take a good bite. Jack is now working on a disc coultter which he intends to mount on a handle and sharpen. This will give him a wider bite for each swing. The axe penetrates the silage easily, but it just takes too many swings to cut loose the ton of silage needed each day. I think something like a knight's broad axe, such as was used in Europe in days of yore, would be ideal. Another possibility that came to us was a chain saw. We ruled that

There's a good excuse for that big smile on Jack Conner's face—that umful of alfalfa-brome grass silage represents some of the most palatable winter feed Sunnygables cows ever had. The unchopped spring-cut roughage kept well that each spear and leaf is intact and almost as green the day it went in.

out because of the binding, corrosive acids, and danger of slipping with a live saw tangled up in a man's legs.

Right now, our main problem, and any reservations we might have about putting up long grass silage, is in the handling. We may learn how to handle it the hard way, but we are determined to find the best means. The other mistakes we have made can be corrected next year. And since we feel that we can put up 250 to 300 tons of grass silage easier, cheaper and better than any other way by dumping long in a trench, I feel that it is up to us to find the best way to get it out. Handling the long grass is no longer just an interesting problem. It is vitally important. I just hope that old adage about necessity being the mother of invention is true.

ALTERNATE SILO

I mentioned that the milking cows did not go after the chopped, tower silage too well. It is relatively good grass silage, but has that characteristic strong, musky smell. The reason we have fed this silage to the milking string once in a while is that we use it as an emergency silo. Any outdoor silo, such as a trench, is tough to work in on rainy or sleety days. When we get weather like this, we feed out chopped silage from under cover. Then we "pay back" the chopped silage reserved for dry cows and calves in the tower silo when the weather is good enough to work in the trench.

A MAN AND A TEAM

I have previously mentioned on this page Martin Sine's struggle to put his hillside farm on its feet after being burned out by lightning this past spring. I think I described Martin's only power unit as a team of horses.

This fall, Martin was working in the

woods to skid out some logs for his new pen stable. As he worked, the team got tangled up on a slippery hillside in the woods and fell. Both horses ended up squarely on their backs, wedged between a tree and a fallen log.

Close to two tons of horses flat on their backs is no joke when you are alone a half mile from home. Martin's first reaction was to run for help. In a few steps, he realized that there was no one at home but his wife and children, and no one within quick call from the farm. He was faced with getting the team free all by himself. It took a lot of courage to go back and work over the two big horses, when a blow from a flailing hoof could put him out of commission, and out of the range of any help at all.

Martin went at it, though, first cutting loose the harness, and then by talking and main force, working one horse around on his back to where he could stand up. Martin doesn't know quite how he managed, but he finally got the team on its feet again, none the worse for their experience.

It was a funny story as he told it, but looking back soberly, it was a real predicament. With help, I doubt that Martin would have attacked the problem with as much strength or conviction as he did with his back against the wall. It just goes to show that a man alone up in the hills with a team can still get along alone, somehow. Maybe necessity is the mother of invention after all.

Merry Christmas and
A Happy New Year

AMERICAN AGRICULTURIST
Advertisers

A new color movie, "Mr. Short-horn U.S.A.," will be available for showing to farm audiences after January 1. Write to the publicity department of the AMERICAN SHORTHORN BREEDERS ASSOCIATION, 7 Dexter Park Ave., Chicago 9, Ill.

A postcard or the coupon on page 7 of the December 2 issue sent to the DELAVAL SEPARATOR COMPANY, Dept. N-3, 165 Broadway, New York 6, N. Y., will bring you interesting new printed material on the DeLaval Model F combine milker.

The railroads which serve New York farmers have an interesting program at 12:30 p.m. each Tuesday, Wednesday and Thursday over the RURAL RADIO FM NETWORK. Try listening to it and we believe you will make it a regular habit.

THE J. I. CASE COMPANY, Dept. M-11, Racine, Wis., has two booklets it will be glad to send you. They are: "Handling Manure for Extra Benefits" and "Case Manure Spreaders."

The use of chain saws is growing rapidly. A booklet entitled "How to Cut Costs and Make Money with Chain Saws" will be sent to you if you will make your request to HENRY DISSON & SONS, ADV. DEPT., Tacony, Philadelphia 35, Pa.

JOHN DEERE COMPANY, Moline, Ill. will be glad to send you information on its line of tractors.

THE NIAGARA MOHAWK POWER CORPORATION calls attention to the importance of checking the electric wiring on your farm. Equipment has been added on many farms without making changes in the wiring to take care of the added load.

An adequate supply of water is important, so is the right pump to deliver it where you want it. GOULDS PUMPS, INC., Dept. U-2, Seneca Falls, N. Y., will be glad to hear about your problem and to tell you the Gould pump that will fill your needs.

The Jacuzzi Aquamat is ready to go the minute you connect it to the water pipes and plug in to an electric outlet. It is made by JACUZZI BROTHERS, INC., Dept. AA-10, Binghamton, N. Y.

New 3-breed cross that is bred quite similar to hybrid corn lays white eggs. Super-Lines Number 999 are rapidly taking the place of high production White Leghorns. They are bred by Imperial Breeding Farms at Ottumwa, Iowa. The three white egg laying breeds of White Hollands, White Leghorns and Barred Hollands are scientifically crossed in producing Super-Lines. Many commercial egg farms who sell to white egg markets are watching this remarkable 3-breed incross with the thought that they may prove more profitable for white egg production. Both White Hollands and Barred Hollands used in this cross are breeds admitted to the American Standard of Perfection in 1949.

Boy of 15 Outwits Thief Wins Service Bureau Reward

By Hugh Cosline

HERE is a grand story from the pen of a boy who went out and lived a thrilling experience instead of getting it second-hand through radio or television. He is Cephas Gibbons of Hermon, N. Y. We

CEPHAS GIBBONS

hope his initiative and quick thinking inspire you as much as it did us. This fine example of the courage and resourcefulness of our farm youth was brought to our attention by his good friend, J. C. Gilman, Massena, N. Y. Cephas remembered Mr. Gilman last Christmas with a subscription to *American Agriculturist*, unknowingly setting the stage for the receipt of the reward check reproduced on this page.

Now, here is Cephas' own story:

"Shortly after I returned home from school on September 12, I noticed a car driving very slowly past our house. The man in the car was looking at the young cattle we had in a pasture across the road from our house. In a few minutes, I noticed the same car driving back toward Russell, and the man seemed to be very much interested in our cattle. I do not know what made me so curious, but I wondered if he might stop down the road out of sight of the house.

Curiosity Paid Off

"I was home alone as my father was helping fill a silo four miles away, and my mother was at a neighbor's. I got on my bicycle and rode about a quarter of a mile down the road. I saw the car parked in a road that goes back into a woodlot, about 10 or 15 rods back from the main road. Leaving my bicycle behind some brush, I crawled along a line fence until I was about 50 or 60 feet from the back of the car. I had a pencil and a report card in my pocket, so I wrote down the license number and rode back home.

"I kept wondering why the car was parked back there, so I went around a different way and came out of the brush about 30 or 40 rods from the car,

on a hill above it. As I stepped out in sight of the car, I saw the man leading one of our black and white Holstein calves up to the back of it. He raised the back cover, pushed the calf sideways into the compartment, and then put the cover down. I yelled at him to dump the calf out, but instead he stepped around the car out of my sight.

Troopers Respond Quickly

"I went back home as quickly as I possibly could, jumped on my bicycle, and rode swiftly one and a half miles to Russell. I ran into a hardware store and called the State Police at Canton, thirteen miles away. I told them what had happened and gave them the license number of the car, telling them I thought it was a Plymouth. I asked them to send a Trooper to Russell as soon as possible. Within about fifteen minutes the Trooper arrived. I got in with him and showed him where to go. When we arrived at the spot where the car had been parked, it was gone.

"I showed the Trooper where the man had broken off a fence post and shoved the calf through the fence and then pulled it across the main road to the car. Then I checked the cattle and found the missing calf was a registered purebred bull calf that my father had bought for \$50 last March when it was three or four days' old.

"Within an hour, the Troopers had found the calf, dressed, in a slaughter house at De Kalb Junction, N. Y., eleven miles from where it was stolen. They picked the man up when he arrived home in Antwerp. The next morning, my father, the man from whom he bought the calf, and I went to the slaughter house and identified the animal. Within a few days, we were called before the Grand Jury of St. Lawrence County and testified as to what had happened.

"The Grand Jury indicted him, and he was held for trial. At the trial he pleaded guilty, and Judge Sanford sentenced him to one year in Canton Jail. The man's name was John O. Zellar. The calf was valued at \$150, but as yet we haven't received any pay for it.

"We wish to thank the State Troopers for their quick action in catching the cattle thief."

Seldom have we paid a reward that has pleased us more! Congratulations to Cephas, the Troopers, and all who had a part in quickly closing this case.

— A. A. —

KEEP LINES STRAIGHT

The Service Bureau is always anxious to help readers in every possible way. If you have troubles, send them along to us and we will do our best to help, assuming they come within the range of things we can handle. However, it only confuses the issue if you also contact other publications about the same complaint. Getting letters from several magazines about the same complaint is apt to irritate a concern to the point where getting an adjustment is impossible.

ASSURE NEXT YEAR'S EXTRA PROFITS -- ORDER YOUR SEAMAN ROTARY TILLER NOW!

SEVERAL hundred recent new SEAMAN ROTARY TILLER owners are already enjoying extra profits and extra hours of leisure because of better, faster soil preparation, lower tillage costs, and former waste land reclaimed with their SEAMAN ROTARY TILLERS. Many report, "Paid for my Seaman Tiller in just one season's operation!" Here are the facts for you:

7-FOOT SELF-PROPELLED MODEL

5, 6 AND 7 FOOT TRACTOR TOW MODELS

TILLIT, FOR SMALL (25 HP AND UP) TRACTORS

3, 4, 5 AND 6-FOOT POWER-TAKE-OFF MODELS

Better Soil Preparation

With the SEAMAN, there's no plow sole to seal off sub-surface moisture; there's uniform tillage to full depth; finer seed-bed with more area to hold surface film moisture; controlled tilth to suit soil conditions. You get better use of fertilizer, lime and water — bigger crops, more resistance to drought.

Faster Tillage at Lower Cost

Time-cost tests comparing tractor-tow SEAMAN TILLER and tractor with plow, disk and harrow show SEAMAN operation cost only 54% of old methods, and six test acres were completed the SEAMAN way in 57% less time. You can work the land over a longer season with the SEAMAN too.

Land Reclamation

Waste land goes to work with the SEAMAN. You can work any land conventional tools can, and many, many places they cannot. New profit of \$100.00 per acre over all costs is possible with waste land reclaimed as seeded pasture.

Use the SEAMAN All Year Long

Self-propelled and motorized models can be used all year long—for irrigation power — specially built Seaman pumps available — silo filling, chopping, hammer-mill, or any stationary power. Cut down on costly farm engines with the SEAMAN power plant.

Here Are the Answers to Questions You've Asked About This Revolutionary Farm Tool!

Yes, the SEAMAN works in stony ground. Patented friction-clutching on the rotor stops individual tine units when immovable objects are struck. Whole tillage unit is hydraulically mounted—rides up over large obstructions. Hardened, alloy-steel tines reduce wear and breakage.

Yes, one man operates the SEAMAN. Motorized and power takeoff models have tractor seat controls.

Yes, the SEAMAN can be towed at high speed on the highway. Moving from one location to another on the open road is easy with the free wheeling SEAMAN.

Yes, tillage depth may be set at any level you want. You can trash mulch with the hood open or mill and mix in trash as heavy as corn stalks throughout the full tillage depth. Degree of tilth—coarse, medium or fine—controlled with auxiliary transmission.

A SEAMAN Tiller Model for Every Farm, Every Budget !

Self-Propelled: 7' tilling width; 100-125 Brake H. P. in gas or diesel power, individual hydraulic wheel brakes, 10 forward, 2 reverse working speeds; most powerful farm machine built;—fully clutched stone rotor; BEST SUITED FOR LARGE FARM AND CUSTOM WORK.

Motorized Tractor-Tow 5', 6', 7' tilling width, gas or diesel engine. 78-125 brake H. P.; auxiliary transmission to control rotor and degree of tilth; fully clutched stone rotor—BEST SUITED FOR MEDIUM OR LARGE FARM WITH ADEQUATE TRACTOR POWER.

Power Take-Off 3', 4', 5', 6' tilling width; fully clutched rotor; minimum tractor H. P. requirements; 25 to 60 H. P. BEST SUITED FOR SMALL TO MEDIUM FARM.

Prices from \$550 up in more than 30 different models
